

Akvelon Inc.

Position: Middle Python+DevOps Engineer

Project: Dropbox Infrastructure

About us

Akvelon Inc (USA) works in the field of software engineering based on a variety of technologies. Our company is a member of the vendor program, which gives employees the opportunity to work with clients in the United States and other countries (**Microsoft, Facebook, Airbnb, Dropbox, Pinterest**, and many others). This is a great opportunity to transfer experience and experience with leading engineers of world-renowned companies.

About project

The team design and build edge services self-serve portal for engineering and non-engineering teams to request resources and services. They implement internal services and integrations using Python and provision for the infrastructure for building internal web applications running on Python and Javascript.

A large part of the scope is maintaining and improving business-critical legacy systems and integrations.

Currently they are working on two AWS Services: NLB (Network Load Balancer) and Route53, including design, implementation, Terraform module testing, writing unit tests, documentation, logging configuration.

In some cases they find some drawbacks and bugs and fix them or analyze the infrastructure to see where it can be improved.
