General Info

Organizer: [Just One Giant Lab](#) (JOGL)

Contact: Patrick Campbell (@PatrickC on Discord); patrick@jogl.io

Date: July 1, 2PM to 4PM CET 2022 (within one day virtual event, 8-12 hours) [See calendar](#)

Theme: Community-based science and innovation. For practitioners of community-based approaches.

Tracks: bioinformatics, biohacking, environmental and conservation, open source scientific instruments. (See full list of track [here](#))

[Event digital environment](#)

Reminders

1. ---> The event is taking place on [Gather.Town](#) the password is **cosijogs**
2. ---> To see final program, click [HERE](#)
3. ---> To see a map of the entire Gather Space, go to this [LINK](#)
4. ---> Your precious Attendee Guide [HERE](#).
5. ---> Use Headphones to avoid terrible echoes + tell your speakers the same
6. ---> **Use Google Chrome or Firefox** to avoid any bugs with the Gather Software.

Any issues, find your technical moderators in the Gather World. Our Name will appear as "

SUPPORT

:First Name"

What we propose

Title: 4th Sector

Objectives: Raise the largely unnoticed existence of a 4th sector to everyone's consciousness.

Outcomes: Build understanding about current change processes and build shared imagination for the 4th sector.

Session Breakdown

See event on the [JOGL webpage](#).

Two complementary sessions where we swarm **trust in traditional institutions**, and the **formalization of the 4th sector**.

Both sessions are not panel presentations. We will experiment with co-creation. Our event will feel like a jazz show, a stage where people with great experience think together (jam, dance). It is a different intellectual experience for participants and for those who attend the event as observers it's a show of collective intelligence at play.

This is moving from thinking alone and presenting our own ideas to thinking together and collectively improving our thoughts. That's in tune with the 4th Sector paradigm, swarming a topic rather than carving the event into 15min "real estate" for each presenter from which to project one-to-many.

Intellectual jamming requires excellent mastery of the technical aspects, because one needs to free brain space to process relational information, coordination, synchronization.

Trust in institutions, including science

14:00–15:00 CET- [Virtual Room #3](#) (use pass *cosijogs*) - see also out Booth #9

*In this session, we share statistics and other data to better understand society's changing attitudes and **trust in traditional institutions** (panel discussion, short presentation, open discussion).*

Protagonists: [Mayssam Daaboul](#) and [Marie-Soleil L'Alier](#)

This session is organized and curated by [Tiberius Brastaviceanu](#)

Recognizing, differentiating and evaluating 4th Sector initiatives: Towards the institutionalization of the 4th Sector

1500–16:00 CET - [Virtual Room #3](#) (use pass *cosijogs*) - see also out Booth #9

In this session, we will co-create a tool to identify organizations that belong to the 4th Sector and to distinguish them from organizations in either the private, public or the solidarity sectors. Our starting point will be Pentagrowth, a tool that is already able to treat open network-type organizations. Javier has kindly accepted to facilitate this workshop to find the key markers of 4th Sector entities. Like an X-Ray machine, this tool will highlight the skeleton of an organization and from the structure of its scaffolding we can place the organization into one of the 4 families or sectors. This would be a first concrete step towards recognition and legitimization of the 4th sector, one step closer for building interfaces between the emerging 4th Sector and the rest of society.. Protagonists: [Javier Creus](#), and [Mayssam Daaboul](#)

This session is organized and curated by [Tiberius Brastaviceanu](#)

Resources (click icon to open)

Note: The first session will set the stage for the second one. The hypothesis is that if trust in key institutions, those who are correlated with socioeconomic prosperity, is undermined, there is a window of opportunity for something new to emerge and gain adoption. The 4th Sector might be that new thing.

More Context:

The problems that today threaten the health of our natural environment, the sustainability of our economies and even our ways of life, are proving so complex and interconnected as to have inspired new kinds of collaborations and organizations - referred to as the *4th Sector*. In parallel to these pressures to find radically new approaches, a new potential has been introduced by the development of new digital technologies, which has sparked the development of a new shared imagination and a new culture, giving birth to new approaches. In other words, new wicked problems have met an army of unaware nerds thinking with new technologies. The hivemind has seized these new tools and adopted the new culture to form the 4th Sector. When successful, 4th Sector ventures produce radically new opportunities for innovation and entrepreneurship.

Fourth (4th) Sector is a space for experimentation with new organizational and economic models. People organize in open networks, using the Internet to communicate and coordinate actions on the ground. These networks are organic, dynamic, and versatile. They don't need a head office or a legal entity to represent them. They are not Coops, Nonprofits, or Inc-s, they are creatures of the 4th Sector. Open networks are new channels for latent social potential, but face insurmountable institutional barriers. These new types of organizations have real impact but their structure and governance are not recognized by our institutions, as if they didn't exist.

Growing consensus

The Growing consensus box is a summary of a section of this report

NOTE: You can still propose adaptations below.

Post all the info developed below on [JOGL](#), mirror in the [shared Track Description doc](#).

What is the **vocation** of the event, aim, scope, ...

The central theme of this event is Community-based science and innovation. This event will provide an opportunity for participants to get to know each other, identify areas of alignment between our respective communities, and lay the groundwork for a second larger summit in the winter.

The event will encompass approximately 10 tracks containing up to 2 hours of programming each. The content and format of each track is decided by the Track Lead in coordination with their partners/collaborators.

(The larger 2-day summit planned for the winter will leverage the relationships we've formed during the summer event to bring in a larger community of practitioners drawn primarily from the networks of the Track Leads. Track leaders will take the experience they've gained from participating in the beta summit to recruit additional track leaders and speakers representing a larger diversity of subject areas. In this way, track leaders like you will have greater opportunity to shape your programming to deliver the most value to your local network, and we collectively will have more opportunity to improve our approach to provide a better user experience to participants.)

Title: 4th Sector

Objectives: Raise the largely unnoticed existence of a 4th sector to everyone's consciousness.

Outcomes: Build understanding about current change processes and build shared imagination for the 4th sector.

Who are the target **participants**?

Experts, researchers, and practitioners applying the community-based approach to different thematic areas.

People knowledgeable about open science, commons-based peer production, DAOs and OVN's.

People who actively advocate for the 4th sector, connected to politicians and local leaders.

Where will the event take place?

This is a virtual event with speakers and attendees from all over the globe.

[Log your time here](#)

See more about [how to organize events](#)

Online. Can have a physical component at the Sensorica lab.

What is the **type** of the event?

- On Zoom
- Length 1h
- Description: Bring in statistics, new information and data about a topic and discuss the data.
- Format: Panel discussion, short presentation of relevant data followed by discussions.

What are the **resources** needed to produce the event?

[Slidedeck](#)

This first event will be free to participants.

Outreach

Communications Materials

Media kit being developed now, will be available for track leaders and other promoters in approx. 1.5 weeks (4/9). In the meantime, the best source of information and promotional material can be found on the [JOGS Space](#). For information on specific Tracks, follow the Groups link to the track you wish to know more about.

Create flyers for the Sensorica event

Outreach planning

Create planning for outreach action

Structure - notes for facilitator

First session

- Welcome audience.
- Present the process, read from the presentation.
- Share the presentation link (public). Tell people that they can click on the graphs / protos to go to the source.
- Present the protagonists
- Ask people to change their name with their Twitter handle / ID
- **Read the Overview (4 and 5)**
- **Announce process**
 - **Go through the slides - build shared understanding as condition for collective intelligence**
 - **Come back for discussions.**
 - **4 sections, one section at the time.**

Second session

- Welcome audience.
- Present the process, read from the presentation.
- Share the presentation link (public). Tell people that they can click on the graphs / protos to go to the source.
- Present the protagonists
- Ask people to change their name with their Twitter handle / ID
- **Read overview**
- **Announce process**
 - **Introduce the 4th Sector (36-38)**
 - **Go over what we've already thought about - build shared understanding as condition for collective intelligence**
 - **Come back anywhere and have discussions.**

{*Signalization tools*}

{symbol for process/status updates - use this to signal important milestones in the process}

{symbol for notes - use this to post reminders or short messages for self or to collaborators}

{symbol for important information - use this to attract collaborators' attention}

{symbol for ToDos - use this to signal to your collaborators about what they can do}
