

BELL TOKEN (\$BLL)

WHITEPAPER

Version 1.0 — August 2026

1. Executive Summary

Bell Token (\$BLL) is a community-driven token built on the Base Chain, created to grow a strong and active ecosystem around its holders and contributors.

\$BLL is focused on community participation, trading opportunities, events, farming incentives and future utility. This whitepaper presents the initial vision and proposed framework. It is not a guarantee of value, profit or exchange listing.

2. Vision

Bell Token is built around one simple idea: ring the bell together. The project aims to create a recognizable Base-native community where people can participate, trade, contribute and grow with the ecosystem.

The long-term focus is community strength, transparent development, ecosystem activity and the gradual introduction of useful features.

3. Why Base

\$BLL is built on Base to participate in its growing on-chain ecosystem and provide a foundation for community and future utility development. Building on Base does not guarantee adoption, liquidity or price appreciation.

4. Token Overview

5. Token Utility

The initial role of \$BLL is to support participation and ecosystem activity. Potential uses include:

6. Token Allocation

The total supply is 1,000,000,000 \$BLL. The user-provided allocation accounts for 65%; the remaining 35% is structured below as a proposed allocation so the full supply equals 100%.

7. Locking and Transparency

40% of the total supply is stated as locked. The project should publicly disclose the lock wallet(s), lock method, unlock conditions and on-chain proof once finalized.

Recommended transparency principles include no undisclosed minting beyond the stated supply, clear vesting information, advance notice of material unlocks where possible, and official documentation of major treasury movements.

8. Farming and Events

15% of supply is reserved for farmers and events. This pool is intended for community campaigns, competitions, tasks and other participation-based rewards. Rules, eligibility and anti-abuse measures should be announced for each event.

9. No Presale and Market Access

There is no public presale under the current plan. Users should only acquire \$BLL through officially announced and verifiable launch, sale or trading channels.

A smart-contract audit is a security review process; an audit itself does not distribute tokens. Until official details are published, users should be careful of fake contract addresses, impersonators, OTC offers and guaranteed-allocation scams.

10. Trading

Trading is an important part of the \$BLL ecosystem, but digital assets are volatile. The project does not guarantee profits, price appreciation, liquidity or market depth. Always trade responsibly and verify official information.

11. Security

Before major market expansion, the project intends to pursue appropriate contract review and/or audit processes as readiness and resources allow. Any completed report should be linked through official channels when approved for publication. An audit reduces technical risk but cannot guarantee complete security.

12. Governance and Community

\$BLL starts as a community-driven project. Formal on-chain governance is not yet guaranteed. The project may explore structured feedback, proposals and voting as the ecosystem matures, with separate rules announced if such a system is introduced.

13. Roadmap

Now: Community building, identity and ecosystem preparation.

Pre-Launch: Finalize contract information, token operations and security planning.

Launch: Official \$BLL release and verified market access details.

September 2026 target: Pursue a CEX listing, subject to exchange approval, due diligence, technical readiness and commercial agreements.

After: Community events, farming initiatives, liquidity growth and expanded utility.

14. Risk Disclosure

Digital assets may lose some or all of their value. Liquidity may be limited. Smart contracts and blockchain infrastructure carry technical risks. CEX listings are not guaranteed until officially confirmed. Regulations may change by jurisdiction. This document is not financial, legal, tax or investment advice.

15. Conclusion

Bell Token (\$BLL) aims to build a strong Base-native ecosystem through community, trading, events, farming and future utility.

With a fixed supply of 1,000,000,000 \$BLL, a stated 40% locked reserve, 10% investor allocation and 15% for farmers and events, the project has an initial economic foundation for long-term growth.

Ring the bell. Build the community. Grow together. 🛎

Token Allocation

Locked Reserve / Treasury — 40% — 400,000,000

Investors — 10% — 100,000,000

Farmers & Events — 15% — 150,000,000

Liquidity & Market Support — 20% — 200,000,000

Core Development & Operations — 10% — 100,000,000

Marketing & Ecosystem Growth — 5% — 50,000,000
