

## Xiaomi SU7 Max Wrapping Guide.

With the 1.1 Update of the Xiaomi SU7 Mod for NFS Unbound it is now possible to make a wrap for the car, but the process might become tricky because of some issues that can not be fixed at a time. This guide is made for clarifying those issues and help the users in the process of wrap making in the form of text with the help of schematic pictures showing the issues and the methods to resolve.

### Front Window

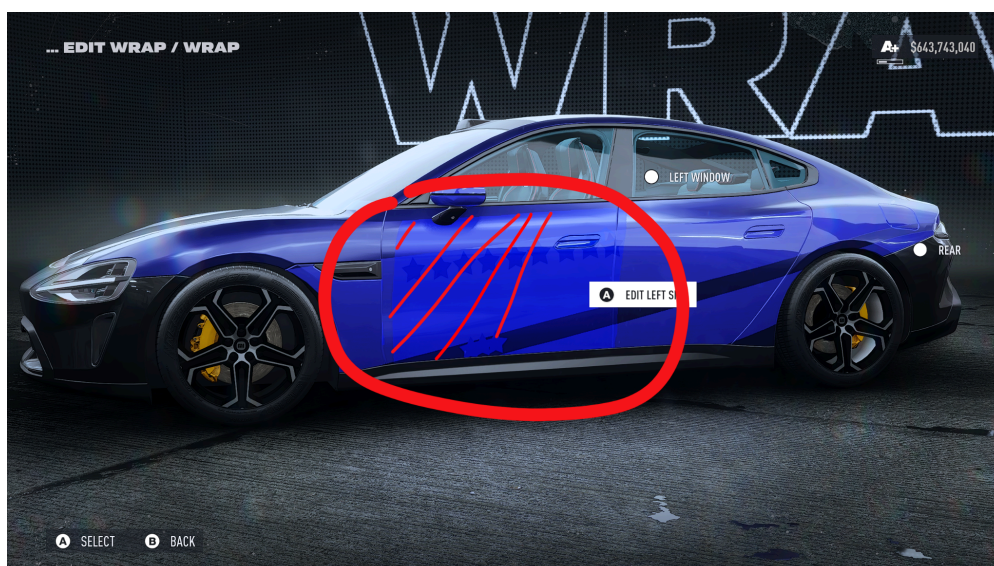

When applying the decals to the front window, a small uneditable triangle will appear. This part is defined as the “top” part of the car, to fix the decal on the front window, go into the “EDIT TOP” menu and apply the patch that will cover the triangle

## Left and Right sides

Wraps on the sides of the car works as intended for the: front and rear fenders, rear doors, for the front doors a duplicating issue will show up, this appears because the mask of the Porsche Panamera (original car) starts to overlap the new body of the SU7, you will spot this by seeing your last placed decal being duplicated while moving around and by doubled blue square when cycling through the zones of the car, to fix the issue - start placing a new decal (preferably to be a simple shape like square), apply mask to it (Left thumbstick/M button) and cover the desired zone with this mask. Then play around with the layer position so the duplicate will stay covered without interfering with the layers below it that much. Pictures below will show two signals of the issue appearing and fixing procedure.

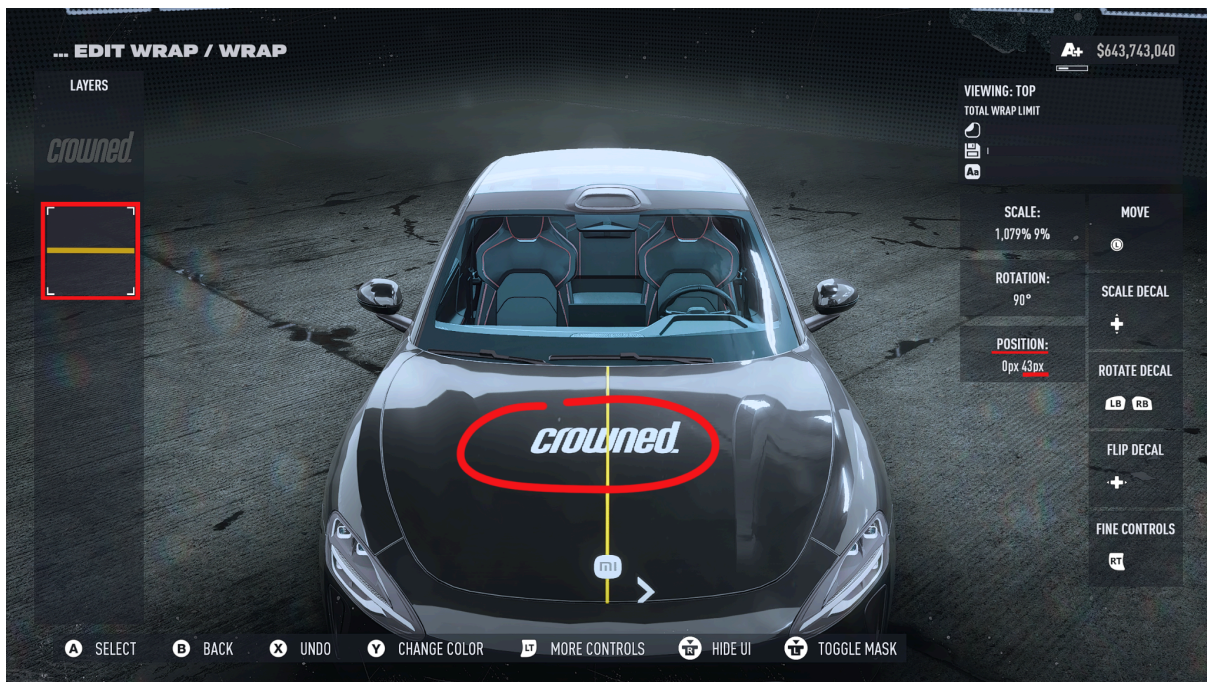

## Top

Top part of the car does not center itself properly, to navigate around the top zone use the “Position” tab on the right side of the screen. The real center is placed around 42-44px by X-axis (second number), to find the center easier you can place the straight line decal using the “Mi” badge on the hood as a start

### Notes

1. Top glass part of the car is defined as front window, do not be confused, "Top" zone is tied to the hood, part of the boot and spoiler
2. Duplicating issue might appear for the front window too, the fix is similar to what was shown for the sides
3. mirrors are located inside the front wheels around the center badge, if you wanna mask or paint your mirrors with different colors - move your decal there
