

# Cashless Payment:

*What?*

A solution for identity-unique cashless micro-transactions with local businesses. The implementation of such a system creates an opportunity for an extensive mobile cloud computing software that can facilitate transactions worth millions of dollars.

*Why? Good Day!*

*Mr. Sriram agreed to give webinar on Energy Management. Date - last week of June 21.*

Transactions during the Kumbh Mela have largely been cash and coin-based. However, the chaotic situation creates serious threats of thefts by pickpockets or simply misplacing one's belongings. This enforces an over cautious mentality in people, resulting in them carrying limited amounts of money and thus expenditures in a large way.

**Please share your ideas by answering the following set of questions known as Heilmeier Catechism that anyone proposing a research project or product development effort should be able to answer.**

- What are you trying to do? Articulate your objectives using absolutely no jargon.
- How is it done today, and what are the limits of current practice?
- What's new in your approach and why do you think it will be successful?
- Who cares?
- If you're successful, what difference will it make?
- What are the risks and the payoffs?
- How much will it cost?
- How long will it take?
- What are the midterm and final "exams" to check for success?
