

Dear \_\_\_\_\_:

I recently discovered this resource that I feel would be an incredible learning experience for my students.

Life on Earth is precious and precarious. Every day, more species go extinct as our world becomes more polluted. People are fighting to make a difference—but is it enough? Or should we look to the skies to save our species?

In this project, students learn about the importance of environmental protection, and about the wonders of Mars. They choose whether to support environmental protection or space exploration, and create a commercial to raise money for their cause.

Imagine if students all around the country learned to appreciate the value of our soil, and began looking to the heavens and dreaming of the future—what a wonderful world that would be!

If you'd like more information, you can explore Blue Apple Projects at [www.blueappleteacher.org](http://www.blueappleteacher.org).

The project costs **\$60**, includes all project plans and supplies, and would allow me lifetime access to the online resources. It also includes modifications for online and hybrid learning environments. I feel like it would be great for my students. **Would you be able to help out?**

If you have any questions or would like to discuss further, please do not hesitate to ask.

Thank you so much for your support!

Sincerely,
