

ANADIUS DLC INSTALLATION INSTRUCTIONS

Put as simple as I could make it :)

DISCLAIMER: I am not responsible if your computer attracts a virus, hacker, etc.

- I recommend using protection on your computer. I use *uBlock Origin*

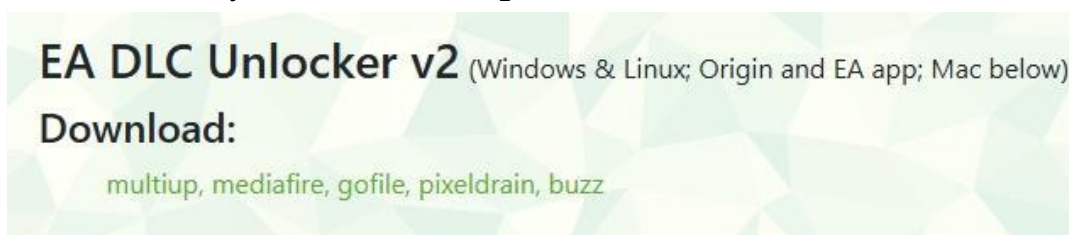

UBLOCK ORIGIN LINK: <https://ublockorigin.com/>

ANADIUS LINK: <https://mirror.anadius.cc/>

Before starting, I recommend creating a backup folder for your game just to be safe. I had no issues but better safe than sorry.

DOWNLOAD UNLOCKER (for both methods)

1. On anadius home page, click *DLC unlocker (V2)* on the top left (ish) of the page
 - Or click this link: <https://mirror.anadius.cc/dlc-unlockers>
2. You will see this on your screen (see picture below), click the link on the website

3. It'll take you to a different page (*filecrypt*) Confirm you are not a robot
 - If you're a robot, sorry. You can't sit with us.
4. Click download next to '*EA DLC unlocker v2 155-0.zip*'
5. Open the file and extract *EA DLC Unlocker*
 - Right click on the file > Extract
6. Double click the file to open it
7. Find '*setup*' in that file and double click to run it
8. A black box will open with options, and you must type a number to select the option
9. Select *install* (type "1") & hit enter
10. When completed, select *add/ update game config.* (type "2")
11. You'll be prompted to select a game, select *Sims 4* (type "21")
12. When completed, quit by typing "q"
13. Now pick which method you'd like to use!!

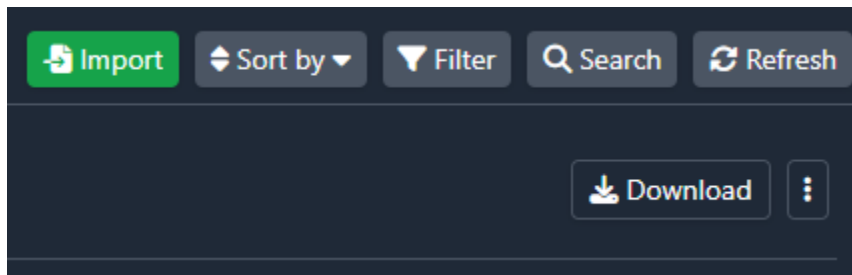

DLC ONLY METHOD

Safer method. However, if you want a lot of DLCs, it's VERY time consuming.

1. Download the unlocker (instructions above)
2. You will see a dropdown arrow next to 'The Sims 4' on the top left of the page

3. Pick 'DLC only'
 - Or click this link: <https://mirror.anadius.cc/sims-4-dlc-only>
4. Pick 'gofile' at the top of the list of links on the page
 - Redirects you to *filecrypt*
5. Verify that you're not a robot (again)
 - Here's the list of the DLCs!! Yay.
6. Click download on the pack you want, you'll be redirected to 'gofile'
7. Click download next to the three dots. Should be on the right side of the page

8. Open *files explorer* and go to *downloads*
9. Open your games installation folder
 - *EA: Library > Sims 4 > Manage > View properties*
 - *STEAM: Library > The Sims 4 > Gear symbol (manage) > Manage > Browse local files*
10. Go back to your downloaded folder (Don't close sims installation folder)
11. Double click on the ZIP file you just downloaded
 - No matter if it auto-extracts or just opens the file, Drag the DLC folder into your installation folder

- EX) You want *seasons (EP05)*, You'll drag 'EP05' over to your installation folder (move it)

12. Yay you got it! Now just repeat until you have all the packs you want.

13. You may need to use the unlocker portion again if your DLCs don't load

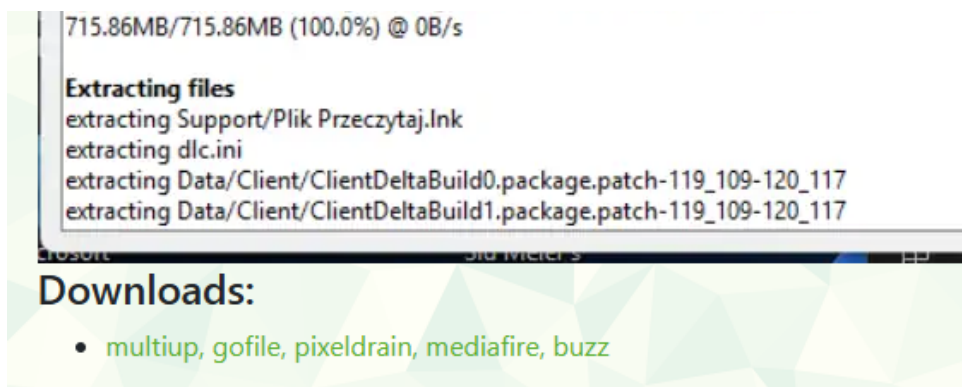

UPDATER METHOD

Does everything automatically for you. Not so safe, I had to temporarily disable my computer's protection to download. However, I did not receive any viruses or anything. If you do, I am sorry, I provided a warning. I've heard of others getting hacked and viruses doing this.

1. Download the unlocker (instructions above)
2. You will see a dropdown arrow next to '*The sims 4*' on the top left of the page

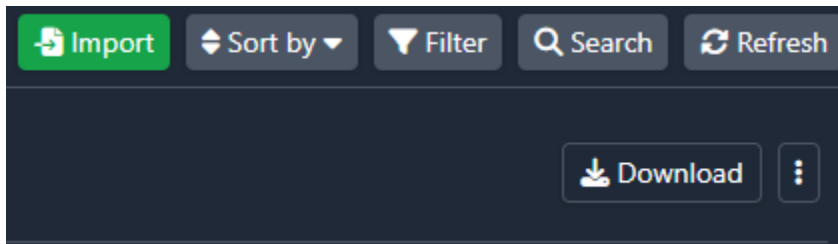

3. Pick '*Updater*'
4. Scroll down the page. Under the screenshot on the website, there will be some links.

5. Click on those links, you'll be redirected to *filecrypt*
6. Confirm you're not a robot
7. You'll see this screen shown below

n/a buzzheavier.com	n/a	Download
sims-4-updater-v2.6.3.zip multiup.io	23.55 MB	Download
sims-4-updater-v2.6.3.zip pixeldrain.com	23.55 MB	Download
sims-4-updater-v2.6.3.zip mediafire.com	23.55 MB	Download
sims-4-updater-v2.6.3.zip gofile.io	23.55 MB	Download

8. Click *download* on the bottom one (Make sure it has *gofile.io* under the file name)
 - You'll be redirected to *gofile*
9. Click download on the website

If you get a download error (RISKY)

1. Delete the file from download history
2. Open *windows security* and follow below
 - *Virus & threat protection* > *quick scan*
 - To be safe
 - *App & browser control* > *Reputation based protection settings*
 - Turn off *SmartScreen for Microsoft edge* and *potentially unwanted app blocking*
3. Try downloading again, it should work

Once downloaded successfully

1. Open *files explorer*
2. Open '*updater_readme*' to see creators notes. They answer some questions if you have issues. Some of which I needed and will mention in this.
3. Keep the updater folder open
4. Open your games installation folder, and leave it open
 - *EA: Library* > *Sims 4* > *Manage* > *View properties*
 - *STEAM: Library* > *The Sims 4* > Gear symbol (*manage*) > *Manage* > *Browse local files*
5. Open the *sims 4 updater* (double click), I extracted first before running
 - If it gets blocked, open *windows security*
 - Go to *App & browser control*
 - Turn off *potentially unwanted app blocking* (RISKY)
6. Once opened, click update and follow along with the prompts until it starts doing it's magic
 - If you get an error message, open *windows security*

- Go to *Firewall & network protection*
 - Turn off the one that says active
7. Try again, it should work. If it still doesn't, download a VPN
- They provide this list of recommended VPNs
 - *Proton VPN* (free version doesn't let you select a server)
 - *Windscribe VPN* (10GB per month for free)
 - *Hide.me VPN* (10GB per month for free)
 - *NordVPN* (paid but has a free trial)
 - *Mullvad VPN* (paid)
 - If it still doesn't work, refer to the '*updater_readme*' notes.
8. Now you wait but YAY WE GOT DLCs!!!

Don't forget to turn all your protection back on in windows security after you're done and scan for viruses!!
