

2. Questions to Consider

2.1. What information might this feature expose to Web sites or other parties, and for what purposes is that exposure necessary?

No additional information.

2.2. Do features in your specification expose the minimum amount of information necessary to enable their intended uses?

Yes.

2.3. How do the features in your specification deal with personal information, personally-identifiable information (PII), or information derived from them?

Feature does not expose personal information. Data is handled in an opaque fashion, with no special treatment given to personally-identifiable information.

2.4. How do the features in your specification deal with sensitive information?

Specification does not deal with sensitive information.

2.5. Do the features in your specification introduce new state for an origin that persists across browsing sessions?

No.

2.6. Do the features in your specification expose information about the underlying platform to origins?

None.

2.7. Do features in this specification allow an origin to send data to the underlying platform

No.

2.8. Does this specification allow an origin access to sensors on a user's device

No.

2.9. What data does this specification expose to an origin? Please also document what data is identical to data exposed by other features, in the same or different contexts.

None.

2.10. Does this specification enable new script execution/loading mechanisms?

No.

2.11. Does this specification allow an origin to access other devices?

No.

2.12. Does this specification allow an origin some measure of control over a user agent's native UI?

No.

2.13. What temporary identifiers might this this specification create or expose to the web?

None.

2.14. How does this specification distinguish between behavior in first-party and third-party contexts?

It does not distinguish between them.

2.15. How does this specification work in the context of a user agent's Private Browsing or "incognito" mode?

Behaviour is identical. No fingerprinting vectors are added.

2.16. Does this specification have a "Security Considerations" and "Privacy Considerations" section?

No. The standard predated the requirement, and has no security or privacy implications.

2.17. Does this specification allow downgrading default security characteristics?

No.

2.18. What should this questionnaire have asked?

N/A
