Types of Data collected

This Application mainly collects user location data to provide accurate namaz (salat) timing for the Users. Also requires boot Internet and Alarm permission to set alarm for different times. It sets an alarm depending on the user location and alarm sets in background for different namaz (salat) therefore it requires Alarm set permission and boot receiver permission.

Now added My Masjid option from there users can view prayer times of all masjid's, also update prayer times. To update prayer time it is required to login with gmail account from there user personal data is collected. User full name, email, address is required for account management.

Data Sharing

Data is shared with Firebase console for analytics, Crashlytics, notification and other features available in firebase.

Processing

We are using pre-entered data in excel sheets. Time is fetched from excel sheet and shown to the user. It takes some time to load the excel sheet the first time then it loads fast afterwards. This processing is used for Aurangabad, Nanded and Parbhani District and other than these 3 districts it calculates prayer timing using the prayer time library. Other location times are set using android library.

Place Permission

Required coarse and approximate location permission to show proper Namaz (salah) time.

Reboot Permission

It requires device reboot permission to set up the alarm.

Basic information Permission
