CSXX2019: Blockchain Technology L-T-P-Cr: 3-0-0-3

Pre-requisites: Expertise in Programming, Basic Knowledge of Computer Security, Cryptography, Networking, Computer Systems Security

Objectives/Overview:

- To provide conceptual understanding of the function of Blockchain as a method of securing distributed ledgers.
- To understand the structure of a blockchain and why/when it is better than a simple distributed database
- To make students understand the technological underpinnings of blockchain operations as distributed data structures and decision making systems.
- To understand a "smart" contract and its legal implications.
- To provide a critical evaluation of existing "smart contract" capabilities and platforms, and examine their future directions, opportunities, risks and challenges.

Course Outcomes:

Upon completion of this course, students will be:

S.NO	Outcome	Level of Attainment
CO-1	Able to design smart contracts and decentralized applications.	Usage
CO-2	Able to understand Distributed Ledger Technologies and apply this concept in real world.	Usage
CO-3	Able to design innovative application models using the the Blockchain technology.	Usage
CO-4	Able to understand core concepts of Blockchain technology that are commonly used across multiple industries to solve large scale problems.	Familiarity

Course Outcomes—Cognitive Levels—Program Outcomes Matrix — [H: High relation (3); M: Moderate relation (2); L: Low relation (1)]

Course	Program Outcomes											
Outcomes	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PO-11	PO-12

CO-4	Н	Н	I,	Н	Н	Н	Н	M	M	Н	Н	Н

UNIT I: Lectures: 4

Introduction to Blockchain, Structure of a Block, Types of Blockchain, Public Ledgers, Blockchain as public ledgers, Cryptocurrency as application of blockchain technology

UNIT II: Lectures: 6

Basic Cryptographic primitives used in Blockchain – Secure, Collision-resistant hash functions, Digital signature, Public key cryptosystems, Zero-knowledge proof systems Cryptographic Hash Function, SHA-256, Properties of a hash function, Hash pointer and Merkle tree.

UNIT III: Lectures: 6

Consensus, Distributed consensus in open environments, Consensus in a Bitcoin network Types of consensus algorithm: Proof of Work (PoW), Proof of Stake (PoS), Delegated Proof of Stake (DPoS), Ripple, Proof of Burn

UNIT IV: Lectures: 5

Introduction to Bitcoin, History of Bitcoin, Bitcoin Transactions, Bitcoin Mining, Bitcoin Address.

UNIT V: Lectures: 8

Introduction to Ethereum - Ethereum Virtual Machine (EVM), Wallets for Ethereum, Differences between Ethereum and Bitcoin, Block format, Mining algorithm, Solidity using Remix IDE, Smart Contracts, Some attacks on smart contracts. Implementations of Blockchain using Python.

UNIT VI: Lectures: 8

Blockchain Technology: Hyper ledger Fabric: System architecture, ledger format, chaincode execution, transaction flow and ordering, private channels, membership service providers, Fabric Peer and Certificate Authority, Case studies of applications

UNIT VII: Lectures: 5

Case studies and projects based on Blockchain Technology.
