

Producers and Consumers		Abiotic and Biotic Factors	Ecosystem Disruptions	Questions We Have From Our Investigations	What Would A Scientist Do? What Questions Would They Ask? Where Would A Scientist Go To Find The Answers?
-------------------------------	--	----------------------------------	--------------------------	--	--

Group 1/Group 2 Plants-producer ple-cons Group 3/Group 4 Group 5/Group 6 Group 7 Group 8 Group 9 Group 10	sandflies and bees ants sand grass trees rubbish Bark,Grass ,Roots,Soil, Leaves,Twigs, Tree,Dirt, Stones,beetle, Dead Spider, Bugs Bark,dead leaves and people Humans grass,the dead leaves on the ground and bark t, dirt grass, dead tree	litter (rubbish) deck sand pit grass bees and wasps weeds, rubbish, pollutions, roots and dead leaves Weeds,Rubbish, Pollutions,Criminals, There was bark,dead, leaves people. Dead leaves and bark and ants crawling think towards the leaves the dead plants rubbish,humans(dama	(1)how do you make sand (2)how do the lavenders grow (with or without seeds)????? (3)can you drink rain water why were there lots of dead things in the area we were assigned to ? (1)How can you make things with nature to things we use every day? (2)Is too much water bad of the planets? (3) Was there something wrong with where they were at(plants)(etc)or was there a particular thing killing them ?	A scientist would discover underneath around it and also in it to see what would happen to it if it would A scientist would look underneath it around it to see what has to be done a scientist would ask what is it, when was it, who was it, and also how was it and how was it done (etc) I also think a scientist would read books,ask questions and also ask others, they would search it up on the internet or
