

General

- This release uses the MS .NET Framework 4.8.
- Both UI and simulation performance have received substantial improvements.
- Numerous fixes have been added on every section of the application.
- **New feature: Benchmark mode** (see section "Benchmark Mode" on manual).
- Hypersonic glide vehicle (HGV) weapons and directed-EMP (D-EMP) weapons are now available in the commercial version.
- ADDED: #13391 - Separated autosave for each scenario: The "Resume from autosave" function now fetches from the new Autosaves folder the latest modified root scenario folder that contains the specific autosaves then uses the autosave.scen of this folder. If you want to load an autosave from a specific scenario, you can select a scenario in the "load scenario" window and a "load autosave" button will appear if a valid autosave exists.
- TWEAK: Debug & exception messages are now written to a different date-marked exception log file each day. This makes it easier to search logs by date.

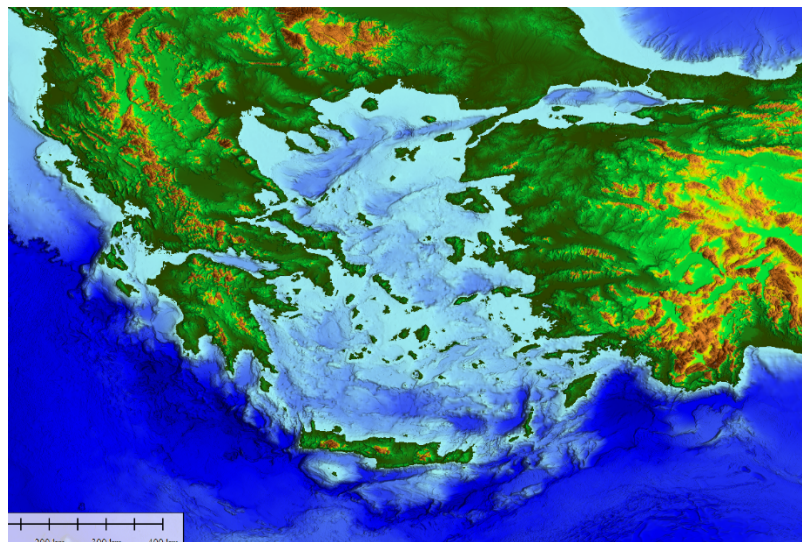

User Interface

- **New Feature: 'Very Coarse' simulation speed** (aka 'Double Flame' mode.) Up to 5x faster than the previous 'flame' mode. See section 3.1 of the game manual for full details.
- **New feature: Formation Presets.** The presets work with any unit type and allow quickly positioning units relative to each other and to the group's lead. For more details see the section "Formation" on the manual.
- **New logged-message category: Doctrine/ROE changes.** Like all other message types, this can be configured to appear on the message log, raise a pop-up and optionally stop the clock, show a message balloon etc.
- **Revised layout on mission editor window:**

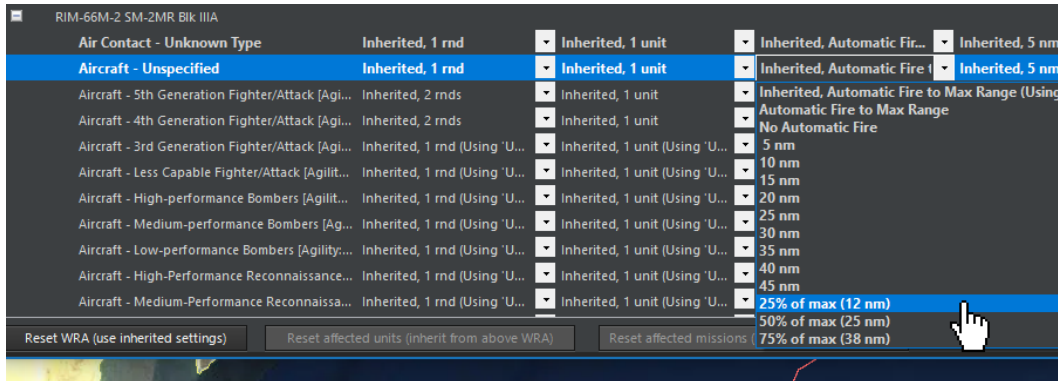

The Mission Editor window layout has been revised, with the unassigned and per-mission assigned units windows now stacked vertically (on top of each other) instead of horizontally side-by-side. This makes it easier to read the full unit names (which may differ only towards their ends) as well as supplementary per-unit information (loadout, status etc.). In addition, the panels now include per-category filter buttons that allow displaying only the selected types of platforms.

- **New feature Operation Planner:** The Operation Planner allows you to create relationships between missions and to have units that are assigned to multiple missions at once. See User's Manual 7.4.
- **New feature Time On Target calculator** has been added to the Mission Editor window. See section 7.1 of the User's Manual for details.
- **New feature Air Tasking Order** has been added to the Mission Editor. This feature allows you to review all aircraft assigned to missions. See section 7.6 of the User's Manual for details.
- **New feature Flight Plan Editor** will allow you to edit strike mission flight plans. See User's Manual section 7.2.
- **New feature Aircraft Task Pools and Packages** allows you to create groups of aircraft and assign them to missions. See User's Manual section 7.1 for more information.
- **New feature multi-mission units:** Units can now be assigned to multiple missions at the same time, and they will execute one of those missions at any given time based on priority and mission status. See the Operation Planner 7.4 in the User's Manual for details.
- **New bathymetry layer:** The "Relief" map layer has been enhanced with its marine counterpart, a rich bathymetric map that illustrates the differences in bottom depth on different map locations. An example screenshot:

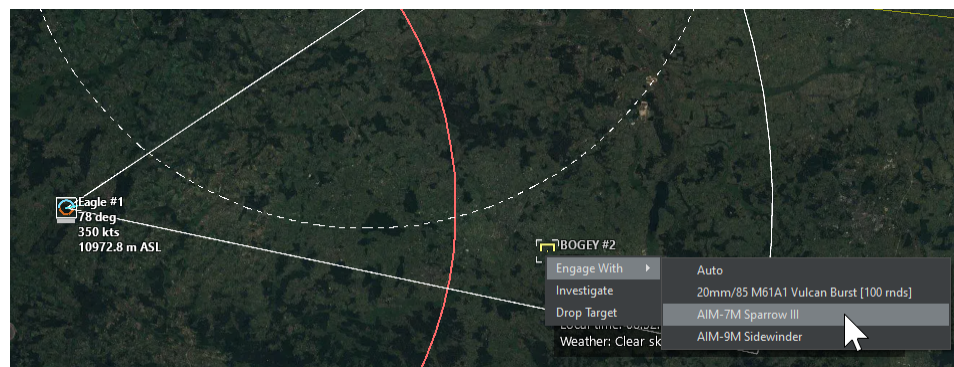

- **Doctrine/ROE/WRA addition:** You can now load/save doctrine XML templates ("Doctrine" window, "General" tab).

- **Doctrine/ROE/WRA addition:** You can now define WRA ranges as percentage of nominal firing range. GUI example:

- **Doctrine/ROE/WRA addition:** A new firing range option 'No Escape Zone' (NEZ) has been added. This option is available only for air targets. NEZ is a very conservative firing policy that will hold fire until the target is close enough so that it is very unlikely to escape the weapon by turning and running away at maximum speed.
- **Doctrine/ROE/WRA addition:** ASuW Doctrine setting 'Use Missile Waypoints' added. Controls whether cruise missiles will automatically generate a 'dog leg' waypoint (if set to 'Yes') or go straight to the target (when set to 'No.') The default is 'No.'
- **New UI feature: Quick manual weapon allocation.** While having an own-unit selected, shift + right-click on contact, and select "Engage with:". This will present a submenu with all suitable weapons to engage with:

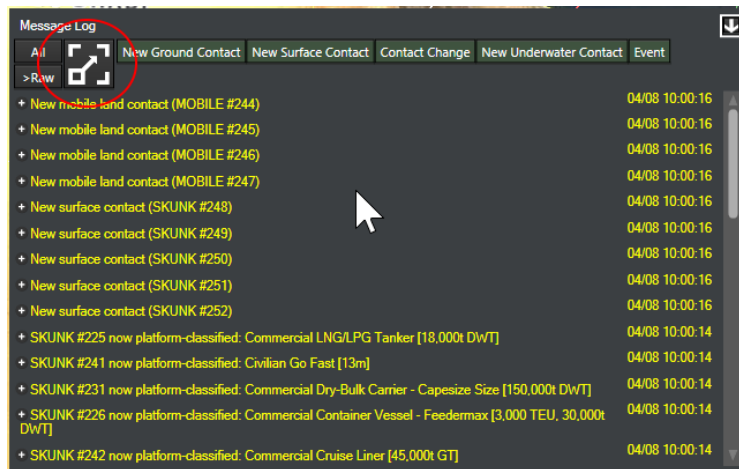

Additional shift + right-click options:

- Engage With (quick allocation, see above)
- Drop Target
- Investigate (ie. **maneuver** to intercept & identify but do not engage)

- Refuel To Tanker
- Join Group As Escort
- RTB
- Assign New Home Base

- **Significant changes to message log:**

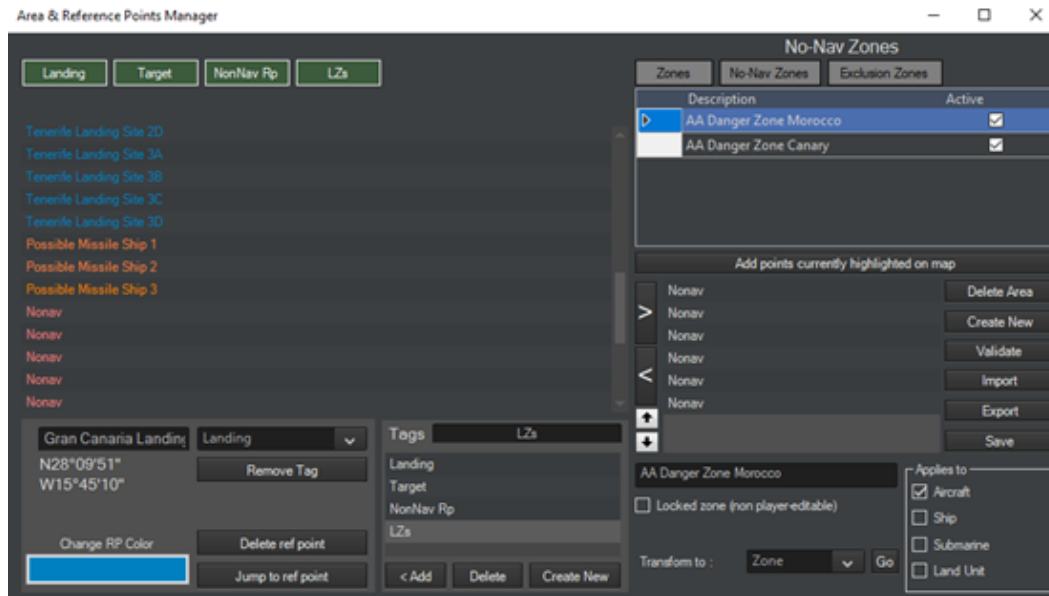

Messages can now be filtered by type directly by clicking on each of the type descriptions in the olive-green buttons (when a type is disabled, its corresponding button color changes to red). Clicking on the "All" button instantly enables/disables all types.

- Clicking on the ">Raw" button toggles between "raw" (aka "waterfall") and interactive modes.
- Clicking on the red-circled icon will detach the message log to its own window, and clicking it again will re-dock it.

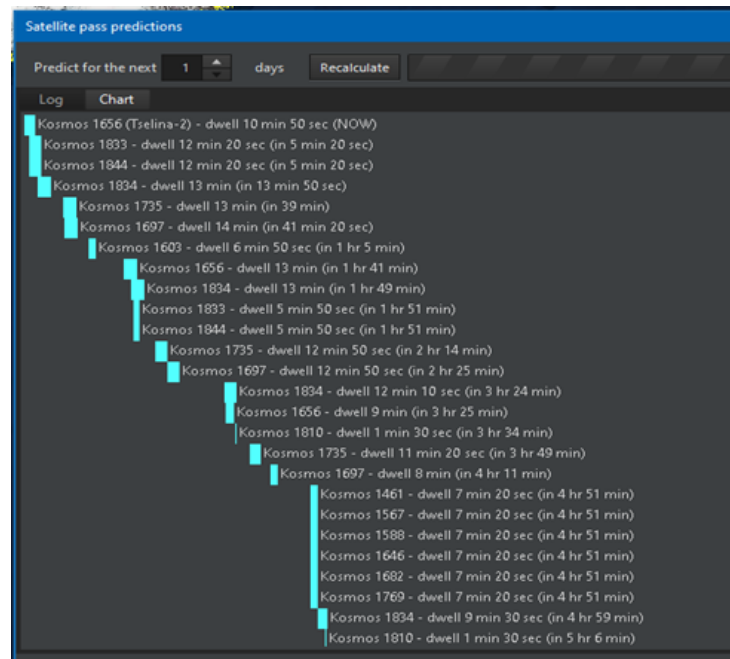

A new message log game option has also been added to automatically set game time acceleration to 1x when a given type of message is posted.

- **New UI feature: Area & reference-points manager** (Missions + Ref. Points --> Reference Points Manager):

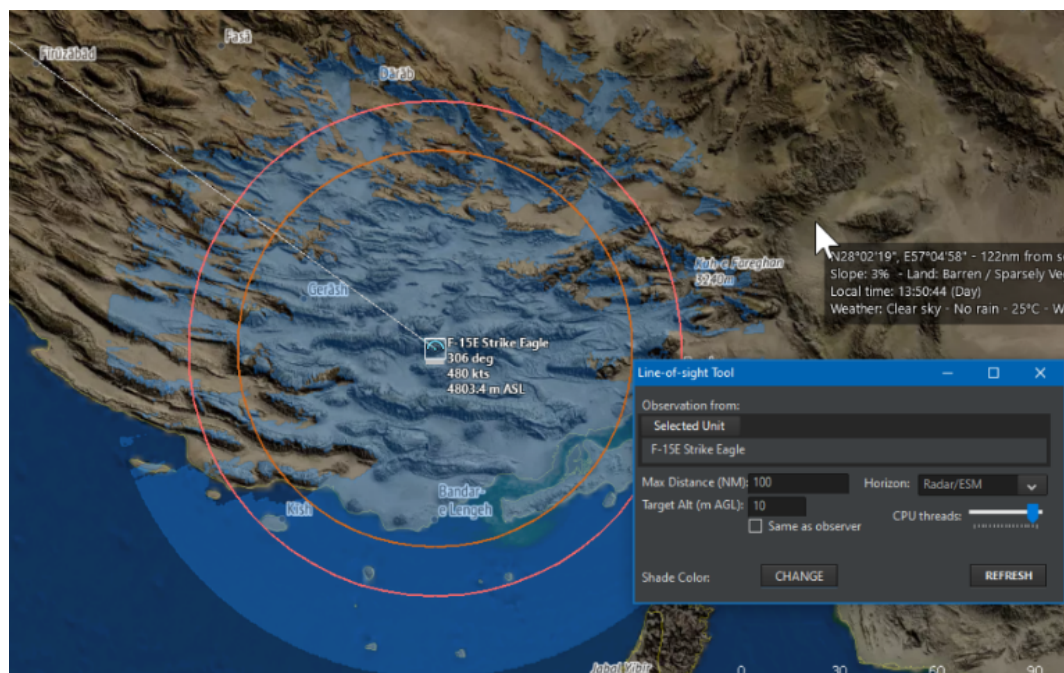

This offers a centralized interface for editing reference points on large-scale scenarios. Ref-points and zones can be organized by tagging and visually distinguished by different colors. For more details see the section “Reference Points Manager” in the manual.

- **New scenario realism setting in 'Scenario Features + Settings' window for 'weather affects ship speed.'** Defaults to 'On' for new scenarios, 'Off' for existing scenarios. When on, ships will suffer reduced speeds while operating in high sea states. This effect will be indicated in the unit data block, unit status panel, and the throttle / altitude settings window.
- **New mission editor UI feature: Generate flight plan for assigned aircraft.**
- **New UI feature:** You can now plot a course for the selected unit directly by right-clicking anywhere on the map (RTS-style). Hold shift to plot multiple waypoints in succession. This can be disabled through the “Game Options” window.
- **New UI feature: Graphical Display of Satellite Pass Prediction** (extra tab on existing window):

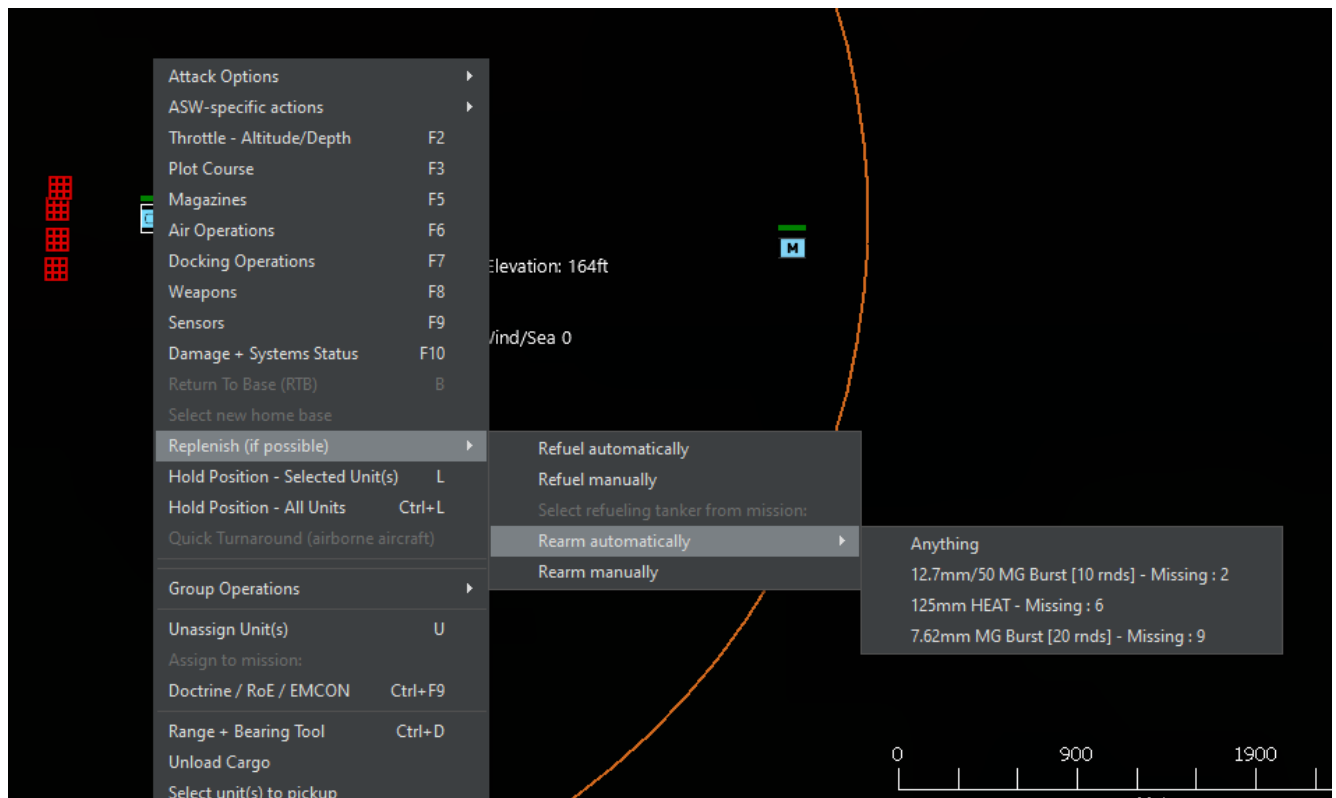

- **TWEAK: LOS Tool:** You can now specify how many CPU threads to use for the LOS calculations:

- **General improvements on DB-Viewer Search**
 - Displays the version number of the current DB.
 - Navigation history for DBID searches
 - Enter key handled
 - Reset textbox on successful search
 - Displays images and descriptions (if present) when viewing sensors

- Visual / Infrared sensor zoom level and sensor properties are now displayed for sensors
- Displays the coverage arcs for mounts and sensors with a graphical 'pie slice' diagram

- The "Replenish" context menu now displays which type to rearm and will automatically find the eligible supply platform with this weapon in store. The context menu only shows the relevant weapons that have missing ammo, so it is easier to replenish a unit from various wide-spread supply facilities/vehicles/ships and keep track of what is missing.
Example:

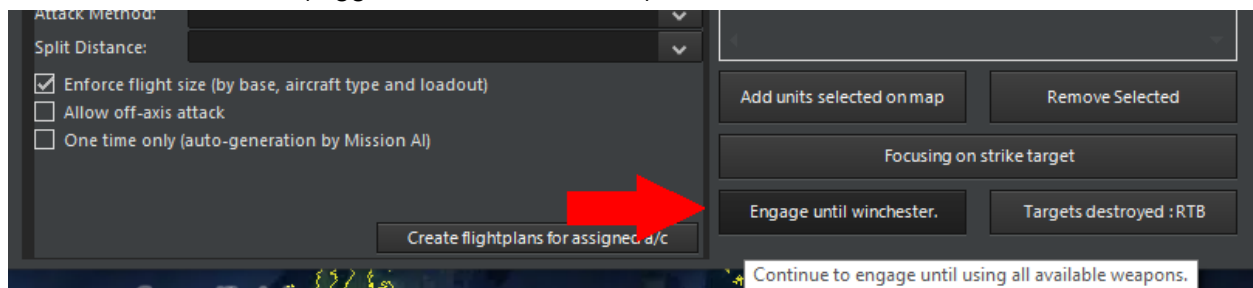

- In the unit status panel you can now set the type of supply (none, fuel, ammunition, or both) that a unit is eligible to supply. Units will not be considered potential sources of fuel or ammunition unless the corresponding supply type is set.
- You can now forbid grouped units from re-supplying units outside their own group using the menu option under 'Unit Orders -> Group Operations -> Forbid supply for non-group members.'
- Contact status panel: Added a unit/contact type description, to help new/unfamiliar players more easily understand what their currently selected unit/contact actually is.
- Contact status panel: Hide the "unit class" hyperlink if we don't have a classification on the contact

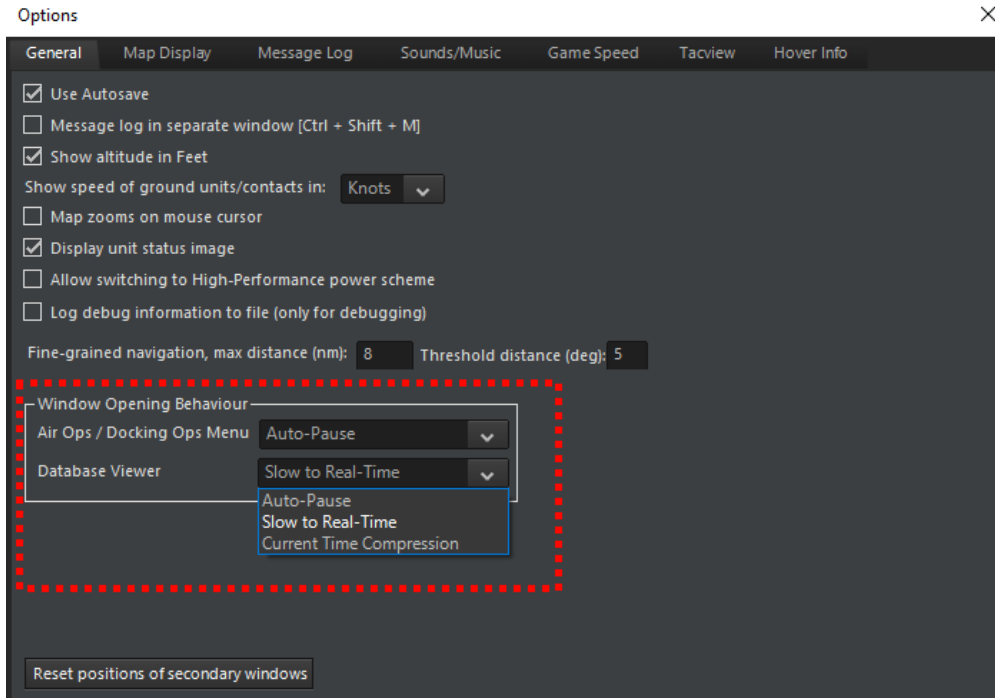

- Added resolution aware scaling to start game menu window.
- Map tweak: Show the "F" or "A" marker under a friendly contact only if we actually know its side
- Added drop-shadow effect to labels on the cargo dialog
- Auto-scale the Steam Workshop scenario select items
- Unit status: Changed "Planes" button to "Aircraft"
- Removed unnecessary error popups
- Remember last location of separate log window
- Map tweak: When drawing a plotted course preview, also display the bearing & distance to current mouse position
- Tacview 3D view: Fixed some units/contacts not appearing in large scenarios or in time compression
- ADDED: UI Request: Quick entry from event list to details
- ADDED #13696: Feature: Show Trigger / Action Type in event editor menus
- Widened the length of the fire/flooding BDA labels
- Tweak: Show message for Doctrine failure for UNREP
- ADDED: #9744: Add blown mines to Losses & Expenditures counts
- Tweak: Cosmetic fix for C-RAM WRA display in DB viewer
- On the unit status panel, when selecting a pitch-enabled unit, also show the unit's current pitch attitude together with the speed data.
- Added: Filter-out DB-deprecated units in the "Add Unit" window lists
- Added: DB-Deprecated units will not display in internal DB viewer
- Tweak: Make area and strike list independent to parent mission
- ADDED: #14010: "List units by type" tab in ORBAT window.

- UI Tweak: When assigning a unit to a mission, report (through a pop-up) possible doctrine/RoE conflicts between unit and mission.
- ADDED: #14078: User feedback for being unable to fire into No Nav zone
- Steam workshop: Added ability to hide uploaded workshop items
- ADDED: Preset Altitudes / Depths for Mine-clearing mission (+ Lua fix)
- ADDED: Preset Altitudes / Depths for Support Missions
- ADDED: Preset Altitudes / Depths for Mining Mission
- Tweak to ground pathfinder UI change to prevent text overwrite
- ADDED: #13386: Resizable panels in Manual Weapon Allocation window
- ADDED: #13429: Ability to set side posture for own side w/o editor
- ADDED: Warning/confirm popup when setting non-hostile posture vs a hostile side
- Map tweak: Display fuel for ballistic missiles only during boost phase
- UI TWEAK: Dynamic sizing of Hoverinfo background and transparency tweak.
the main map window
- UI Tweak: Hoverinfo background
- ADDED: #13536: DB-Viewer UI improvement: Navigation history (back-button) + DBID quick-access + Duplicate window button
- ADDED: #14372: Allow dual-seeker ARMs (e.g. AARGM) to be fired (non-BOL) against non-emitting targets
- ADDED: Game Options: Added option to display speed of ground units in knots/KPH/MPH (knots by default)
- UI Tweak: Display of deg/min/secs round up to next minute instead of showing 60 seconds
- UI Tweak : CTRL+S Will now quick save instead of opening the save dialog
- TWEAK: #13334 - Opening unit DB entry now doesn't open a new window but adds it to the latest one.

- ADDED: #13391 - New button allowing to delete saved games
- Map Tweak: Tolerance from Panning / Mouse click now scales with zoom
- UI Tweak: Mouse wheel step
- ADDED: "Tanker" category to WRA targets
- ADDED: #14403 - Possible to adjust pier area in with "Set orientation" menu, also minor visual tweaks for pier lanes
- ADDED: #14347 - Added a new behavior and toggle to force strike team member to focus on target instead of engaging opportunity targets
- ADDED: Show available setting of "Bingo Threshold" option on Doctrine Template. This option is also configurable through Lua. Example:
ScenEdit_SetDoctrine({side="USN", {bingo_threshold="40"}})
- ADDED: #14485 Alternative option to mark unit as auto-detectable in ScenEdit (shortcut: Shift + S)
- ADDED: New dedicated icon for "guided projectile" weapon type.
- Added: Ability to sort save games by "Date Modified".
- Added: Shift+RMB shortcut selection to pickup cargo/unit
- Added: #14516 : unit/cargo pickup feature is now available for ships
- ADDED: #14523 : Possibility to toggle more involved attacks (stick until winchester) in strike missions (toggle in strike mission UI):

- Added: Allow users to set pause behavior for game menus:

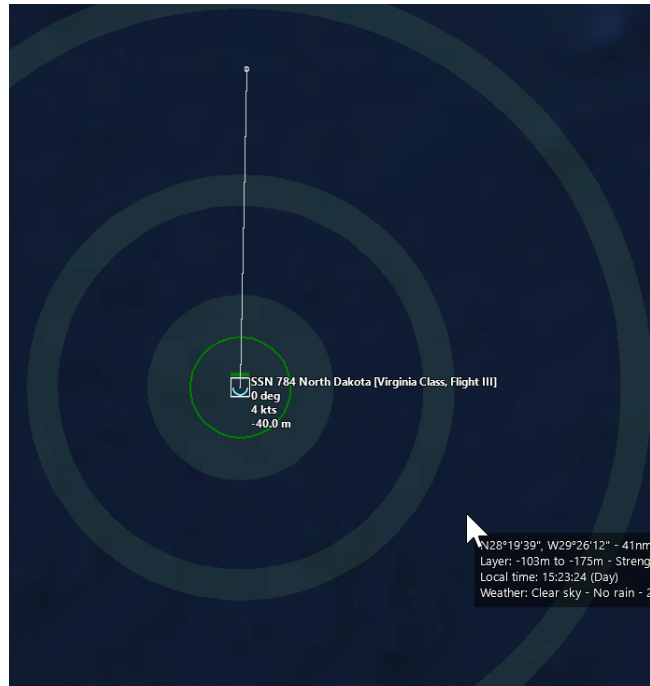

- ADDED: SubType filter to DB viewer and "Add Unit" window
- ADDED: #14558 - "Show/Hide All Range Symbols" setting is now saved in personal map profile
- TWEAK: On "Edit hosted aircraft" window, added subtype filter
- TWEAK: On "Edit hosted aircraft" window, added warning if site cannot support added aircraft for takeoff/landing
- ADDED: #14568 - Missions are now sorted by name for mission assignment & context menu.
- UI Tweak: Show user feedback on scenario load error
- Added: QOL for Mission Editor unit listing. Showing loadout role (e.g. "Land Only Standoff") by default, and detailed loadout info (e.g. "AGM-154A JSOW [BLU-97/B], ATFLIR [FLIR]") when the unit is selected
- UI TWEAK: Contacts detected by OOC units are designated with a [OOO] prefix and randomized autoincrement, to distinguish from on-grid contacts
When in "isolated POV" view, the message log is filtered to show only messages originating from the isolated unit
- UI Tweak: Weapons window: Show if no datalink present on unit. Example:

er 2024 - Zulu: 02:00:00 - Local: 06:00:00 - 16 hr to go - Camera Alt: 145172m

Weapons for F 263 Jinnah					
Mount (click weapon for DB info)		Time to fire	Status	Reload Priority	Show Arcs
 12.7mm/50 STAMP	(10/10)	Ready	Operational		☐
 12.7mm/50 STAMP	(10/10)	Ready	Operational		☐
 324mm Mk32 TT Twin	(2/2)	Ready	Operational		☐
 324mm Mk32 TT Twin	(2/2)	Ready	Operational		☐
 76mm/62 OTO Melara Super Rapido	(40/40)	Ready	Operational		☐
 China VLS [16 Cells]	(16/16)	Ready	Operational		☐
0/16 CY-3 ASROC [Yu-7] (No reloads available)		Guided Weapon			☐
16/16 HQ-16A [SA-17 Semi-Copy] (No reloads available)		Guided Wea...		No datalink	☐

- ADDED: #14568 - Missions are now sorted by name for mission assignment & context menu.
- UI Tweak: Show user feedback on scenario load error
- ADDED: QOL for Mission Editor unit listing. Showing loadout role (e.g. "Land Only Standoff") by default, and detailed loadout info (e.g. "AGM-154A JSOW [BLU-97/B], ATFLIR [FLIR]") when the unit is selected
- UI TWEAK: Contacts detected by OOC units are designated with a [OOC] prefix and randomized autoincrement, to distinguish from on-grid contacts
When in "isolated POV" view, the message log is filtered to show only messages originating from the isolated unit
- MAP TWEAK: Include the direct-path coverage circle when drawing the CZ rings. This makes it clearer where the shadow zone (between direct-path limit and the 1st CZ) lies.
Example:

- Updated: [DB viewer] Sensor page - Added "max targets illuminated" value
- Added UAV classification (NATO system:
https://www.researchgate.net/figure/NATO-UAS-Classification-1-2_fig1_305760970)
- Revised "Edit Cargo" window:

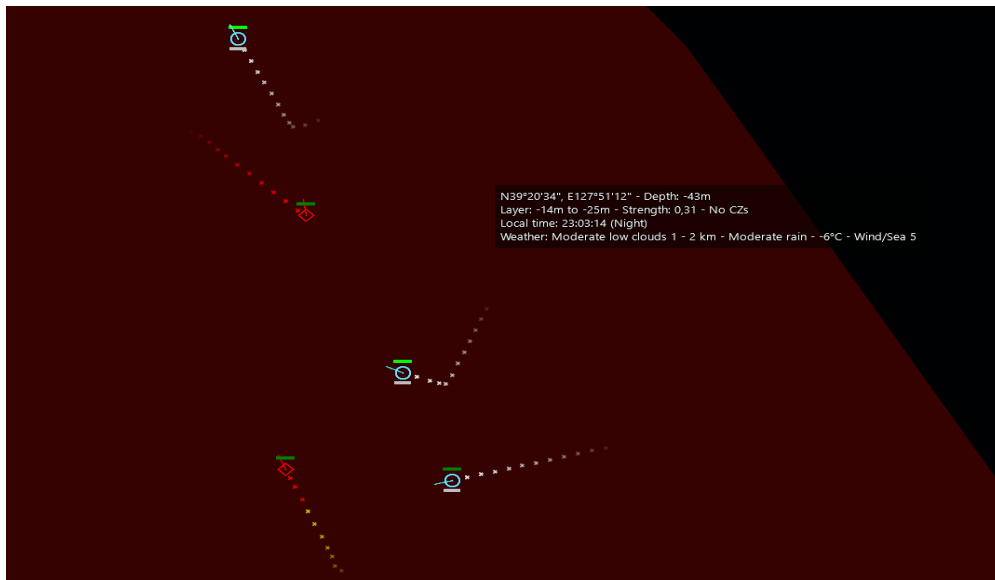

Current Cargo:				Available Cargo:			
Name	Mass	Area	Crew	Type	Name	Size	Mass
ACV-30 #16	29.10	25.96	3	Facility	Inf Plt (Generic)	Personnel	1.60
Inf Plt (Marines) #17	1.60	2.56	16				
Inf Plt (Marines) #18	1.60	2.56	16				
Inf Plt (Marines) #19	1.60	2.56	16				
AAVP-7A1 #22	29.10	25.96	3				
AAVP-7A1 #23	29.10	25.96	3				
AAVP-7A1 #24	29.10	25.96	3				
AAVP-7A1 #25	29.10	25.96	3				
4x 120mm Mortar	4.00	16.00	12				

Max Size: Large Cargo (Tank, TEL, Trailer)
 Mass: 154.30 / 24000 tons
 Area: 153.50 / 4600 sq.m.
 Crew: 75 / 1903
 Unload

Load

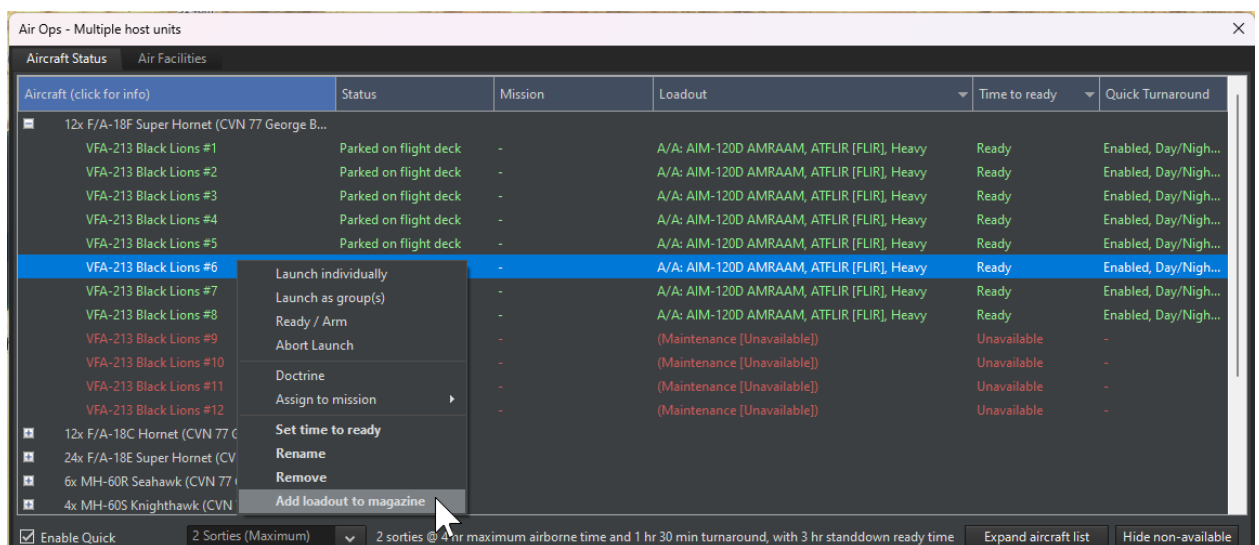

- UI TWEAK: Cargo window: Added progress bars for capacity used
- Usability improvements in "Edit Cargo" window:

- a) Added "Delete" button to directly delete loaded units instead of unloading them
- b) Added name filter for cargo source lists (both existing units and database)
- ADDED: You can now customize the color of displayed plotted course paths (Map Settings --> Define plotted course color)
- UI TWEAK: Added side to name when displaying friendly aircraft in air ops form
- UI TWEAK: locked reference points must be unlocked before they can be deleted.
- UI TWEAK: The LOS tool now displays 'no selection' when a unit is not selected.
- ADDED: The Mission Editor now allows you to specify an alternate home base to return to when mission units 'return to base.'
- ADDED: You can now set the home base of aircraft and naval units via the unit orders menu.
- ADDED: A new UI element 'Slug Trails' has been added, configured via the game options window. This will leave a trail of dots behind units on the map, giving an indication of each unit's recent speed and course.

- ADDED: New 'Split' and 'Merge' orders are available under the unit orders menu. These orders allow the player to split off or combine the component aimpoint mounts inside mobile facility units.
- UI TWEAK: The Mission Editor window now re-size itself to support lower screen resolutions.

- UI TWEAK: Mini-map appearance and display has been improved.
- UI TWEAK: The fuel section in the Unit Status panel now displays fuel tanks (such as drop tanks) separately.
- UI TWEAK: The Lua Console window can now be resized.
- ADDED: A game option has been added to display the current noise level of ships and submarines next to the unit icon. This value displays the loudest sound band value (Command uses VLF, LF, MF, and HF bands) in decibels radiating from the front/side/rear aspects of the vessel respectively.
- UI TWEAK: You can now add an aircraft to a host via the Air Ops window using the 'Add Unit' button.
- Some 3D models, for use in Tacview, have been updated.
- TWEAK: Hide WRA buttons from left column of Mission Editor
- TWEAK: Sensor/Comm form shows ^ on name to indicate is on a mount
- TWEAK: Add "ABM capable" flag to applicable weapons in DB viewer
- ADDED: Mission/Package Class displayed in Mission List in Mission Editor
- FIXED/ADDED: Manage readying of AC during flightplan generation
- ADDED: "Add loadouts to magazine" function in context-menu on Air-Ops window:

This makes it easy to populate the host platform's magazines with weapons compatible with the selected loadout, and thus quickly allocate sufficient weapons for this loadout.

- TWEAK: Contact emission strings are now a little brighter even when very faded out
- TWEAK: When displaying identified contact emissions, show only the emitter name (not description)
- FIXED: Better visual-anchor settings when resizing "Event Action Editor" window
- Removed drop-shadow effect from "Scenario Features" window

Simulation & Mechanics

- **NEW FEATURE: Energy-based flight model for boost-coast missiles.**

Boost-coast missiles (ie. most tactical missiles that are not powered continuously) now use a much more realistic flight model that distinctly models the initial boost-sustain and post-burnout regimes, and takes into account the effects of gravity (shedding speed while climbing and regaining it when diving) and aerodynamic drag. The drag changes with altitude, built-in drag coefficient and whether the weapon is maneuvering (pitching/turning) or not.

This change makes it possible to apply real-life "exhaust the threat" tactics and further constrain edge-of-envelope shots.

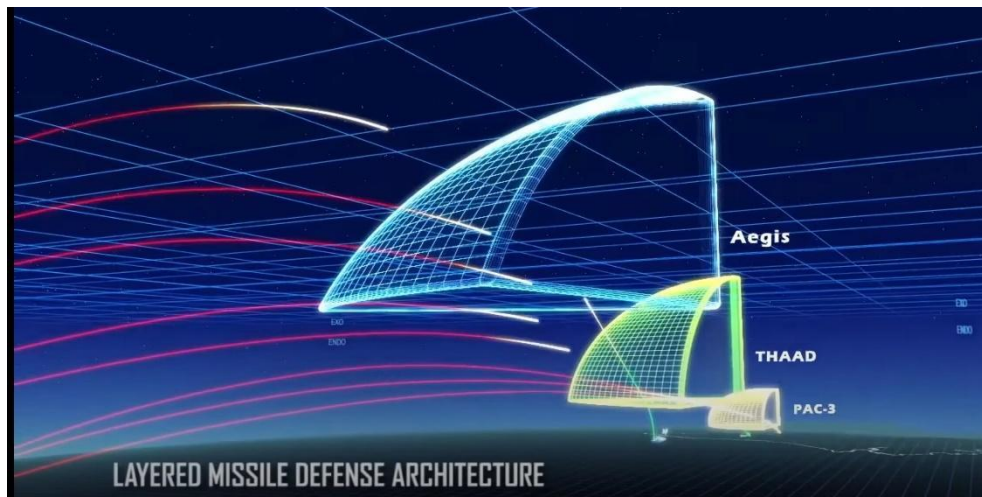

On missiles that use this model, the "fuel bar" indicator now represents only the remaining boost-sustain fuel, NOT to the total remaining energy. After burnout, the fuel bar is removed and the weapon will coast until it reaches its stall speed.

The boost-coast model also demonstrates the advantage of dedicated anti-ballistic missile (ABM) interceptors (SM-3, 9M82, Sprint, 53T6 etc.) in comparison with the smaller engagement envelope of those boost-coast surface to air missiles which are capable of anti-ballistic missile engagements (48N6, 40N6, SM-6, 9M83, etc.)

Currently the boost-coast model applies to anti-air weapons only. The model will be expanded to include air-to-ground weapons in a future update.

- **Significant changes in default aircraft defensive maneuvers.** Instead of beaming and diving to the deck by default, now they will first try to outrun an incoming missile while matching its relative pitch (i.e. climb if the missile is below them, or dive if it's above them), and if the missile closes the distance they will then attempt to beam it (or its parent guidance) while also reversing their climb/dive.
 - **NEW FEATURE: Passive Coherent Location System (aka "Passive Radar").** For a general background on PCLS, see here: https://en.wikipedia.org/wiki/Passive_radar
The v488 release of the DB3000 database contains several "non-detecting emitter" platforms such as radio, TV, and cellular antennas or navigation beacons such as LORAN. It also contains a prototype PCLS vehicle that can be used in testing and as the basis for operational variants. For more details see the section "PCLS" on the manual.
 - **NEW FEATURE: Distinct mobile ground units.** In addition to modeling mobile forces as "aimpoint facilities" (see: <https://www.warfaresims.com/?p=1159>), it is now possible to explicitly model individual vehicles with their own customized properties such as armor, propulsion, mounts, sensors etc.
The new-style ground units have unlocked certain brand-new capabilities, such as true amphibious vehicles (with distinct speed & fuel consumption properties overwater and on land).
-

- **NEW FEATURE: Cargo Containers, Cargo Transfer Missions, and Ammunition and Fuel in Cargo.** Ammunition and fuel can now be moved in cargo containers and delivered to unit magazine / fuel records. A new Cargo Transfer mission allows units to move cargo from one host to another without unloading the cargo to the map. See the User's Manual section 7.2 for details.
- **NEW FEATURE: Palletized Weapons.** Pallet Weapons (such as the AFRL's "Rapid Dragon" prototype pallet-launcher for JASSM cruise missiles) can be fired by specific aircraft that are equipped with that kind of weapons. The pallet is dropped from the carrier aircraft, is retarded and balanced by a parachute, and can then begin dispensing its hosted weapons. Pallet weapons can be allocated to a target both as a single pallet (ie. all weapons contained in the pallet are implicitly allocated to the target) or by individually assigning a single target to every **palletized** weapon in the aircraft Loadout. When allocating a whole pallet, all the weapons within it will be added to the salvo, and all of them will share the same target as the Pallet.
- **Significant improvement on kinematics of ballistic missiles,** with true-to-life boost-phase profiles and overall trajectory parameters (this is important in order to more faithfully model the abilities & limitations of BMD systems).
- **Added extra factor for ABM DLZ calcs:** The intercept point must be within the weapon's min/max target altitude envelope (e.g. SM-3 cannot make intercepts under 100km because its "warhead"/kill-vehicle is effectively a miniature spacecraft). This factor severely restricts the ABM's intercept window. This screengrab from a LM THAAD-ER promo video illustrates this well:

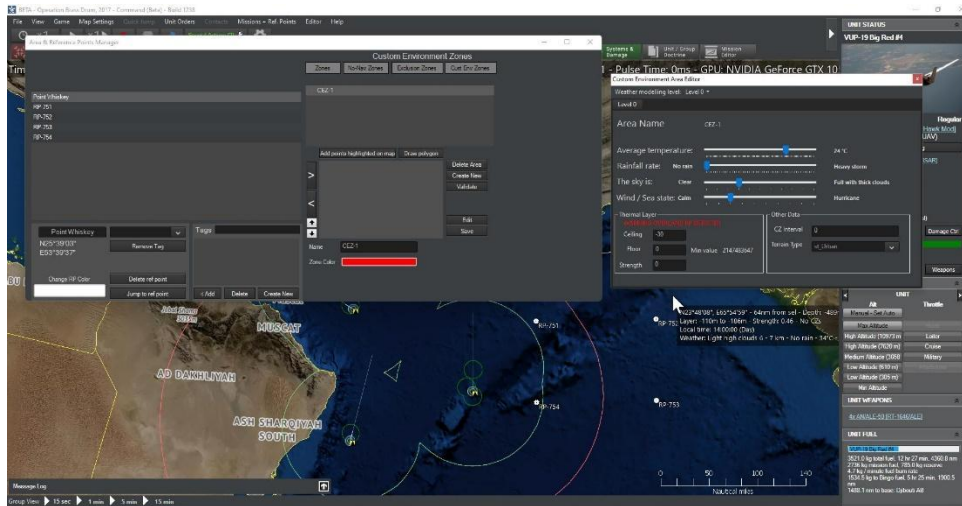

- **Major EMCON addition: Intermittent Emissions & EMCON alert levels.** For details, see the revised section "EMCON Tab" on the manual.
- **New facility category: Surface + Underground** (DB v490+ required). This represents facilities that are buried underground but also have major access from the surface in order to operate. Examples are all ballistic missile silos, some command bunkers, retractable coastal-**defense** turrets like ERSTA etc. These facilities are vulnerable to damage/destruction both from direct

weapon impacts on their surface area and also from underground shock from **near misses** by penetrator weapons (or exceptionally powerful surface detonations e.g. from a multi-megaton warhead or asteroid impact).

- **New feature: Custom Environment Zones.** You can define a zone where you can tailor the environment & weather properties. This can be useful if you want a "controlled environment" for sensor checks, mobility & damage tests etc., but can also be used as a localized "weather override" for scenario purposes.

To create a CEZ, bring up the Refpoint Manager and switch to the "Cust Env Zones" tab. Create a zone as usual, and then click on "Edit". A new window should appear, in which you can define the weather & environment properties:

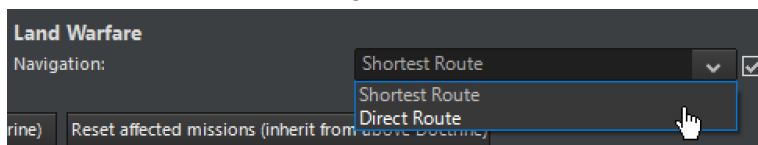

- **New feature: Aircraft maximum endurance.** Aircraft now have a maximum airborne endurance depending on their size, type, crew proficiency, and number of crew members. Aircraft that have been airborne for their maximum endurance return to base with the state 'RTB - Exhaustion.' The maximum endurance is displayed in the unit status panel under fuel status and is color coded to highlight when the maximum time is approaching. These values can also be accessed via Lua using the unit object fields currentExhaustion and maxExhaustion.

- Non-ABM-optimized AAW missiles (e.g. Stunner) use a direct-flight profile when engaging ballistic targets (even if they have a lofting/cruise altitude set in the DB)

-
- An AAW missile's attitude control type is now taken into account when determining Ph reduction due to reduced terminal energy:
 - Interceptors with non-aerodynamic control (e.g. SM3, THAAD) have no reduction at all
 - Interceptors with aerodynamic-only control (ie. most SAMs) have the as-standard reduction
 - Interceptors with combined aero & non-aero control (e.g. Aster 15/30, 9M96) halve their Ph reduction (the non-aero control diminishes the negative effect of low terminal energy on maneuverability)

- Expendable UAVs (and weapons/decoys) can now have their plotted course programmable in throttle & altitude
- Surface targets are now affected also by underground explosions, though not nearly as much as underground facilities (they receive much less of the transmitted shock). This makes it possible to damage/destroy buildings through near misses by penetrator weapons.
- New simulation feature: Certain weapons occupy their launcher while they are enroute (e.g. most wire-guided torpedoes & ATGMs). The mount cannot be reloaded before the weapon is destroyed one way or another. (Requires DBs v489+)
- ADDED: RWR detection of SARH/TVM illumination auto-generates an (incoming) missile contact, even if the missile itself has not yet been detected yet. This provides realistic ahead-warning (and thus evasion opportunity) to the targeted aircraft.
- New simulation feature: Daisy Chain-type weapon datalinks (DB v489+ required). This allows weapons to communicate directly with each other instead of being slaved to a datalink platform.
- The AI can now employ Mobile Air Decoys (MALD/TALD) (DB v489+ required).
- Tweak: #14570 - Support missions can now be created without a ref point (with a visual warning). Example use: Turn on ground based radars without having to turn them on the side-level or individually.
- AI improvement in wingman logic: Distances when evaluating contacts is measured from the group LEAD (not from itself), so the wingman will not chain-investigate away from lead. Also, wingmen do not investigate contacts alone if some other aircraft in the same mission is checking it. So if there are more unknowns than flights, wingmen may start breaking off to investigate them when they are in weapons range of their lead, otherwise they will not.
- Visual and IR checks are now also susceptible to look-down clutter. For example, it is easier for anIRST (or the plain Mk1 Eyeball) to pick out an aircraft over the horizon line than against the surface background.
- ADDED: #14372: Allow dual-seeker ARMs (e.g. AARGM) to be fired (non-BOL) against non-emitting targets
- Relaxed the "have reached formation station" check threshold for aircraft (makes them less eager to throttle up to get to station)

- Ship attack AI tweak: When attacking with a contact bomb (ie. saboteur or kamikaze), if possible use flank throttle to minimize the target's reaction window.
- TWEAKED visual & IR signature modifiers of in-flight missiles so that they are picked up at shorter ranges.
- Aircraft AI tweak: When in normal loiter mode (no mission flight or plotted course), wingmen ignore their formation station and just stick close to the leade.
- Pathfinding Tweak: Force a fixed degree buffer (2 degrees) on fine-grained PF calculations (to prevent OOMs)
- Corrected logics for dummy mines
- Added: Fuel resupply and rearm for submarines
- Changes to sonar cavitation model:
 - a) Cavitation is now dependent on desired speed (ie. screw turn rate) rather than current vessel speed
 - b) The noise boost from the onset of cavitation is now gradual (instead of all or nothing), and its magnitude depends on how much above the cavitation threshold the desired speed is
- Re-Added: Check for DB capability to support improved submarine optics
- Re-Added: Submarines only use Mk1 Eyeball when on the surface
- Tweak: Change non-cutter sweep on ship/sub to use 3-point sweep area
- Aircraft will now pitch up/down as necessary if weapon release is blocked by boresight limits
- ADDED: When undetected units fire gun/missile weapons, their visual signature blooms temporarily and they are susceptible to detection.
- TWEAK: Torpedo AI: BOL-fired torps snake if able
- ADDED: #13434 New navigation doctrine option: Direct path for ground units:

- This causes land units to head straight towards their destination without any pathfinding considerations.
- Added: Mine-Clearing mission can now also use "repeatable loop" movement style (so e.g. use explicit sweeping lanes)
- MIRVs are now released from ballistic missiles one every 5 seconds (instead of all together)
- TWEAK: #5525 - ARMs are less effective against low-band emitters (increased chance of a miss)
- AI TWEAK: Weapon terminal point altitude calc - scale by relative distance
- ABM DLZ tweak: Added "intercept will happen within weapon minimum range" as a fail condition
- ADDED: #11059: Active sensors are temporarily de-activated when approaching a target tanker
- ALARM parachute loiter capability added (this requires DB3K v489+)
- Vehicles now use cargo load/unload time calculation similar to aircraft
- Cargo transfers now attempt to keep grouped units (that are stored in cargo) together when possible.
- Amphibious vehicles assigned to an active mission but stored in cargo will be checked against available docking facilities on their host unit. If available, they will self-unload into the docking facility. This is currently checked every 30 seconds though only one unit can self-unload per check. Amphibious vehicles cannot use davit type docking facilities.
- Docked amphibious vehicles that are assigned to an active mission will launch automatically if they're in range of the mission area. This is the same behavior as boats currently perform for cargo missions, but amphibious vehicles auto-launch for all mission types.
- Ground Units can now perform cargo missions.
- Units assigned to a cargo mission will now wait until they are either at least 80% full or there is no new cargo expected to arrive before they execute a cargo delivery/transfer mission.
- ADDED: #11072: "X days underway" tracker for submarines.

- New feature: The simulation engine now handles the execution of weapon firing salvos in parallel, resulting in faster game play when a large number of weapons are firing at once.
- Ships and submarines now use more realistic torpedo-evasion maneuvers.
- Visual and infrared sensors now have a significantly reduced range when performing a volume search (i.e. searching a large area for possible new contacts.)
- New sonar sensor type 'vertical flank array' added. This sensor type can improve tracking ability.
- Weapon launch angle checks now provide more detailed feedback in the manual attack window.
- Weapon 'estimated time on target' calculations are now more accurate.
- The 'Remains in Area' scenario event trigger can now handle multiple units.
- Strike missions now support time-on-target, including multi-domain strike missions (i.e. missions with multiple types of units assigned such as aircraft, ships, artillery, etc.)
- A separate 'station throttle' setting for ships, submarines, and ground units has been added to applicable missions.
- AESA radar sensors now suffer much less effect from ground clutter when continuing to track an already detected target.
- Radar sensor horizon propagation values have been updated based on data from 'Electronic Warfare and Radar Systems Engineering Handbook'. Typical factors are 1.23, 1.5, and 1.06 for radar, ESM, and EO/IR respectively.
- New ini setting 'DedupAlliedMessages' in Command.ini under the [Game Preferences] section to prevent the duplication of shared contact messages in the message log of allied sides. When set to 'True' this can result in a significant performance improvement when playing scenarios with many allied sides and/or shared contacts, but will also prevent contact-related messages (new contact, contact status change, etc.) from appearing in the player's message log for contacts shared with them by an allied side. Default setting 'False.'
- New option 'AllowInGameDownloads' supported in Command.ini. Add 'AllowInGameDownloads=False' to Command.ini if you wish to prevent the game from downloading game assets over the internet.

- TWEAK: Presence of an UAV catapult implies ability to catch UAV for landing
- TWEAK: Included "Iron Bomb" weapon type into the "extend if necessary while manouvering to attack" aircraft logics (fixes some cases where the aircraft would overfly the target before lining up to bomb)
- ADDED: Allied detected contacts are retained upon changing posture but works as remnant contact that is updated by the side's POV
- Tweaked/Fixed : Very high yield weapons (such as nukes) now cause blast damages to airfields --- tweaked underground shock damage calculation. The effect of nukes used to be limited to its crater radius, the latter being used for the fireball calculation. In most cases, an airburst nuke will not create a crater at all, thus not touching open-air facilities. Now we use the blast propagation to emulate the fireball behavior for airfields and taxiways which are likely to be glassed. Furthermore, the seismic effects use the crater equation as well, which suffer from the same threshold issue. Underground damages still use the crater equation, but the threshold is lowered, while damages are reduced.

Scenario Editor / SBR / Scripting

- **Lua documentation has been updated and revised.** The external link to the documentation from the Lua console window has been updated. <https://commandlua.github.io/index2.html>
- **An external repository of Lua 'Weapon Release Scripts'** can now be accessed via the external links menu on the Lua Console window.

- **[Lua] You can now set non-integer values for WRA ranges,** by using the ScenEdit_SetDoctrineWRA method.

Example:

```
ScenEdit_SetDoctrineWRA({guid='734035c8-11c2-4d49-9eab-758bed8292b7',  
target_type='Surface_Contact_Unknown_Type', weapon_dbid=586},  
{'inherit','inherit',19.5,12.3})
```

- **You can now export/import a side/mission/group/unit's doctrine/ROE settings via Lua,** using the new methods ScenEdit_ExportDoctrineToXML and ScenEdit_ImportDoctrineFromXML .
Exported files are saved on folder \Defaults.

- **You can now get/set a group's formation preset via Lua.**

Example of getting:

```
local f = ScenEdit_GetUnit( {name='Group 14',  
guid='GNRIJH-0HM7B6IC7IPUR'} )  
print(f.formation)
```

Example of setting:

```
local f = ScenEdit_GetUnit( {name='Group 14',  
guid='GNRIJH-0HM7B6IC7IPUR'} )  
f.formation = {name='wedge', transpose=true}
```

For setting the formation preset, the following options are available:

- name : Name of the preset as stored on StandFormations.txt
- transpose (optional): If True, the members are insta-teleported to assigned positions. If False (also default), the members are assigned their positions and will try to reach them as possible.
- spacing (optional): Override the preset's default spacing value
- **spacing unit** (optional): Override the preset's default unit of spacing (0 for nautical miles, 1 for meters)
- bearing (optional): Override the group lead's desired heading

- **Doctrine/ROE/WRA addition: You can now define WRA ranges as percentage of nominal firing range.**

Lua example:

```
ScenEdit_SetDoctrineWRA({guid = 'a1a52edf-3541-4b55-bea4-58d4e1ab11dc',
target_type='Surface_Contact_Unknown_Type', weapon_dbid=1575},
{'max','inherit','50OfMax','25OfMax'})
```

The valid values for the WRA percentages are: '25OfMax', '50OfMax' and '75OfMax' (case-insensitive)

- Added: [Lua] New "magazine" wrapper and new methods for setting exact weapon quantities on magazines and loadouts:
 - unit:getUnitMagazine(mag_guid)
 - unit:getUnitMountMagazine(mount_guid)
 - magazine:weapons
 - magazine:setExactWeaponQuantity(wpn_guid, quantity)
 - loadout:setExactWeaponQuantity(wpn_guid, quantity)
 - loadout:weapons
- Added: [Lua] setExactWeaponQuantity method for "ready to fire" on-mount weapon-records
- Lua: new method GetTimeOfDay (returns table showing day/night/dawn/dusk)
- ADDED #10087: Lua request: Manipulate (open/close) UI secondary windows through Lua
- Lua: New wrapper properties:
 - obeyEMCON : True/False
 - sensors: able to turn individual ones by GUID off/on
- Tweak: Lua add base contacts to validation
- Added: [Lua] Optional parameter to force map re-centre for SE_SpecialMessage method
- ADDED: Edit platform's Air and Docking facilities
- ADDED: [Lua] ScenEdit_GetDateTimeTicks method (get precise elapsed time in ticks)
- Tweak: [Lua] SetUnitDamage can set component to destroyed
- Added .readytime property to unit wrapper for setting value

- Added: Lua function ScenEdit_TransformZone() . This can be used to convert an exclusion zone, a standard zone or a nonav zone into another zone type while retaining the common properties.
- Added Lua unit wrapper .isEscort
- Tweak: Random Time Trigger: Show the actual random time value under the editor to assist with scenario design (<https://www.matrixgames.com/forums/tm.asp?m=5051862>)
- Added [ScenEdit_SetZone] - Possibility to change color of zone and added compatibility of setzone for standard zone --- example : ScenEdit_SetZone("A",-925, {areacolor='7D0064'}) for violet (HEX color only)
- Added [LUA ScenEdit_TransformZone] - Standard zones can be added through this method now with -925 as argument
- Tweak: [Lua] Added DBID as option on :filterOnComponent method (e.g. unit:filterOnComponent('sensor',1650))
- TWEAK: [Intermittent Emission] : Tweaked ScenEdit_ClearUnitEmconConfigs(UnitNameorID), function parameter name now explicitly tells that we can either pass unit's ID or Name.
- ADDED: [Lua] ScenEdit_AddReferencePoint color
- ADDED: [Lua] New wrapper object for waypoints. You can change the type of any waypoint in a unit's plotted course. Example:

```
au = ScenEdit_GetUnit({name='AGM-158A JASSM [Penetrator] #967',
guid='46skox-0hmf72m6q6bdj'})
print(au.course)
wp = au:getwaypoint({GUID='46SKOX-0HMF72M6Q6L64'})
wp.type = 0                (<----- This changes the waypoint type, in
this case to manual plotted-course waypoint)
print(wp.type)
```
- ADDED: [Lua] New method ScenEdit_SetLoadoutAvailable to disable selected AC loadouts. Usage example: ScenEdit_SetLoadoutAvailable({LoadoutDBID=411, Available='False'})
Using this, you can enable/disable a loadout (only globally scenario-wide ATM). Disabling a loadout hides it from the "Re-arm AC" window.
- ADDED: Lua function [Tool_LOS] allows scripts to test line-of-sight between a source and destination unit or location.
- ADDED: Lua property fields added for the Sensor object: type, role, ranges, altitudes, and RangeAgainstTarget.
- ADDED: Lua property for movement style has been added to patrol and mine-clearing missions objects.

- ADDED: Lua property fields and methods have been added to the ActiveUnit and Cargo wrapper objects for editing unit cargo and cargo containers.
- ADDED: Lua functions [UI_SelectUnitsPrompt_OwnSide] and [UI_SelectUnitsPrompt_FromSides] added. These functions will display a window prompting the user to select units and return the IDs of the selected units to the script.
- ADDED: Lua function [ScenEdit_CreateBarkNotification] allows for the creation of short text messages that display above a unit for a brief time and then fade out.
- ADDED: Lua functions [ScenEdit_TransferMount], [ScenEdit_SplitUnit], and [ScenEdit_MergeUnits] allow for breaking up or merging aimpoint mount facility units via scripting.
- ADDED: color properties have been added to control the color of reference point and zone objects via Lua.
- TWEAK: SBR scripts now support air and docking facilities.
- ADDED: New unit import data has been added for US installations in Europe, the Middle-East, and the Pacific, and Chinese installations in the South China Sea.
- Group import/export now allows flagging INST as a 'template' for multiple occurrences. See the User's Manual section 5.8 for details.
- New CSV import/export of scenario components is now available under 'Missions + Ref. Points -> Operation Manager -> Import/Export Tool.'
- ADDED: [Lua] Added method Tool_LOS_Points for determining LOS between two geopoints (selectable horizon-type). Usage example: Tool_LOS_Points({latitude='3.12', longitude='3.488', alt=3000}, {latitude='9.34523', longitude='9.32445324', alt=3000}, 1)
- ADDED: [Lua] Added new properties to unit wrapper: .signature and .noiseLevel
- ADDED: [Lua] Added "Unit(s) destroyed" to Lua template in operation planner's lua editor
- ADDED: [Lua] Exposed IsDestroyed property for Unit wrapper
- ADDED: [Lua] "IsLoadedAsCargo" property for unit wrapper; indicates if the referenced unit has been loaded as cargo
- ADDED: Implemented scenario-level 'default' setting to use NEZ for missile WRA

Content

- All official scenarios (incl. DLCs) have been rebuilt in the latest DB releases and tweaked. This includes various fixes for reported issues.
In all the scenarios the WRA firing ranges for AAW missiles have been adjusted to No-Escape Zone (NEZ) by default. Practically this means that units will delay their AAW shots until they estimate that the target cannot outrun the missile.
- Includes numerous new and updated .inst (facility installation) files by Kushan.
- Numerous additions and modifications to Tacview 3D models; credit goes to all original model creators.
- Includes the latest (v498a for the DB3000 and v498 for CWDB) revisions of the official databases.

DB3000 CHANGELOG

Aircraft

A.400M Atlas [Grizzly] -- Malaysia (Air Force), 2015
A-12A Avenger II -- United States (Navy), 2023
A-4KU Skyhawk [AF-1B Falcao] -- Brazil (Navy), 2015, 5x, 1x Crashed 2016, AF-1M
AB.205A -- Zimbabwe (Air Force), 1978-1990, 11x
AB.206A1 Jet Ranger -- Iran (Air Force), 1975
AB.206A1 Jet Ranger -- Iran (Army), 1975
AB.212 -- Austria (Air Force), 1980, 26x
AB.212 ASW -- Iran (Navy), Agusta-Bell, 8x
AB.412EP -- Japan (Coast Guard), 1993, 8x, Agusta-Bell
AB.412EP -- Japan (Coast Guard), 2000, 3x, Agusta-Bell
AB.412EP -- Niger (Air Force), 2022, 2x
AB.412SP -- Zimbabwe (Air Force), 1983, 12x
Ababil-5 UCAV -- Iran (Air Force), 2022
AC-130J Ghost Rider -- United States (Air Force), 2022, RFCM
Aerostar Tactical UAS -- Ethiopia (Air Force), 2020
Agusta A-109E Power -- Greece (Air Force), 2003, 3x
AH-1W Super Cobra -- Turkey (Navy), 2022
AH-1Z Viper [Super Cobra] -- Czech Republic [1993-] (Air Force), 2022, 10x
AH-64D Apache Longbow -- UAE (Army), 2009, 30x
AH-64E Apache Guardian -- Netherlands (Air Force), 2025
AH-64E Apache Guardian -- UAE (Army), 2019, 37x
AH-85A [Mod. AB.206A1 Jet Ranger] -- Iran (IRGC Ground Forces), 2009, Shahed 285
AH-85B [Mod. AB.206A1 Jet Ranger] -- Iran (IRGC Ground Forces), 2009, Shahed 285
AH-85C [Mod. AB.206A1 Jet Ranger] -- Iran (IRGC Navy), 2009, Shahed 285
Airbus A.330-200 MRTT -- Spain (Air Force), 2023
Airbus A.330-200 MRTT -- UAE (Air Force), 2027, 3x, DIRCM & MAWS

Airbus A.330-200 MRTT [KC-30] -- Brazil (Air Force), 2023
Airbus A.330-200 MRTT [Phenix] -- France (Air Force), 2025, Melissa, Syracuse IV SATCOM
Aladin UAV -- Germany [FRG/Reunified] (Army), 2005
Alpha 900 UAV -- Greece (Navy), 2022, 5x
An-124 Condor -- Libya (Commercial), 1987-2019, Libyan Arab Air Cargo, 1x Seized 2017, 1x Destroyed 2019
An-22A Antey -- Commercial (Commercial), 1994
An-2T Colt -- Azerbaijan (Air Force), 1992
An-2T Colt -- Russia [1992-] (Air Force), 2022, Decoy
An-2T Colt -- Russia [1992-] (Air Force), 2022, Drone Decoy
An-2T Colt [Kopgerokuz] UCAV -- Azerbaijan (Air Force), 4x Bombs
An-2T Colt UAV -- Azerbaijan (Air Force), SAM Decoy
An-32B Cline -- Iraq (Air Force), 2011, 2x
Anka+A UCAV -- Kazakhstan [1992-] (Air Force), 2022, 3x
Anka-S SATCOM -- Malaysia (Air Force), 2025
Archange [Falcon 8X] -- France (Air Force), 2025, 3x
Armed Quadcopter UAV -- Generic (Generic), Smash Dragon, 40mm Grenade Launcher
Armed Quadcopter UAV -- Generic (Generic), Smash Dragon, 5.56mm Assault Rifle
AS.332 Super Puma [Oryx] -- South Africa (Army), 2006, Drummer II Upgrade
AS.332M1 Super Puma [TH06] -- Switzerland (Air Force), 1987, 15x
AS.365N2 Dauphin 2 -- Myanmar (Air Force), 2021, 2x
AS.532UL Cougar Mk1 [TH98] -- Switzerland (Air Force), 2001, 12x, Ex-Super Puma
AS.555C2 Fennec -- Denmark (Air Force), 2003, 8-12x
AS.555C2 Fennec -- Denmark (Army), 1990, 12x, TOW
AS.555C2 Fennec -- Denmark (Army), 2005-2006, 3x, Iraq War Mod, TOW Replaced w/ CM Pods
AS.565MB Panther -- South Korea (Coast Guard), 2012, 5x
AT-33A Shooting Star -- Mexico (Air Force), 1961-2012
AT-802U Sky Warden -- United States (Air Force), 2023, 6x Initially, 75x Planned, Armed Overwatch
ATR-72 ASW [RAS-72-500 Sea Eagle] -- Pakistan (Navy), 2019
ATR-72-600 -- Commercial (Commercial), 2010
ATR-72-600 -- Myanmar (Air Force), 2021
ATR-72MP -- Malaysia (Air Force), 2025, 2x
AW.119Ke -- Civilian (Civilian), 2007, AW.119 Mk2
AW.119Ke -- Ecuador (Air Force), 2019, AW.119 Mk2
AW.139 -- Japan (Coast Guard), 2006, 24x
AW.139 -- Malaysia (Air Force), 2021, 2x
AW.139 -- Malaysia (Coast Guard), 2021
AW.139 -- Malaysia (Navy), 2022, 3x
AW.139 -- Nigeria (Navy), 2018, 4x, +1x 2021
AW.139 -- South Korea (Coast Guard), 2x
AW.149 -- Poland (Navy), 2022
AW.169 -- Commercial (Commercial), 2015
AW.169B -- Austria (Air Force), 6x On Order
AW.169B -- Qatar (Air Force), 2021, 1x, +3x On Order
AW.169MA -- Austria (Air Force), 12x On Order, AW.169 LUH
AW.169MA -- Italy (Army), On Order, AW.169 LUH
B-1R Lancer -- United States (Air Force), 2025, JATM
B-21 Raider -- United States (Air Force), 2026
Banshee Jet 80+ UAV -- Japan (Ground Self-Defense Force), 2022, Target Drone
Bayraktar MIUS -- Turkey (Air Force), 2023, Loyal Wingman, Combat Unmanned Aircraft System
Bayraktar TB2 UCAV -- Bangladesh (Air Force), 2022, MX-15D
Bayraktar TB2 UCAV -- Burkina Faso [1960-] (Air Force), 2022, CATS
Bayraktar TB2 UCAV -- Djibouti (Air Force), 2022, CATS
Bayraktar TB2 UCAV -- Ethiopia (Air Force), 2022, 6x, CATS
Bayraktar TB2 UCAV -- Nigeria (Air Force), 2022, MX-15D

Bayraktar TB2 UCAV -- Pakistan (Air Force), 2022, MX-15D
Bayraktar TB2 UCAV -- Togo (Air Force), 2022, CATS
Be-12PS Mail -- Azerbaijan (Air Force), 1992, SAR
Bell 206B JetRanger -- Canada (Coast Guard), 1972-2017
Bell 206B JetRanger -- Greece (Army), 1976, 14x
Bell 206B JetRanger -- Turkey (Army), 22x
Bell 212 Utility -- Canada (Coast Guard), 1972-2017, 6x
Bell 412EPI -- Canada (Coast Guard), 2017, x7
Bell 412SP -- South Korea (Coast Guard), 2013, 1x
Bell 505 Jet Ranger X -- Civilian (None), 2017
Bell 505 Jet Ranger X -- Indonesia (Navy), 2021, 2x
Bell 505 Jet Ranger X -- Japan (Coast Guard), 2018, 4x
Bell 505 Jet Ranger X -- Montenegro [1992-] (Air Force), 2020, 2x
Bell 505 Jet Ranger X -- South Korea (Air Force), 2025, 40x
BN-2A Islander -- Zimbabwe (Air Force), 1976, 6x
Bo-105C -- Philippines (Army), 2021, 1x, Donated
Boeing 747-8 BBJ VIP -- Commercial (Commercial), 2010
Boeing 747-ALBM [ALBM Carrier Aircraft] -- United States (Air Force), 1986
Bombardier Challenger 604 [A37] -- South Korea (Coast Guard), 2011, 1x
Bombardier Global 6000 -- Germany [FRG/Reunified] (Air Force), 2023, PEGASUS
BQM-74E Chukar III UAV -- Japan (Maritime Self-Defense Force)
Buccaneer S.2D -- United Kingdom (Royal Navy), 1976, AN/ALQ-101, AIM-9D, RN A/C Updated to S.2B
Buccaneer S.2D -- United Kingdom (Royal Navy), 1983
Buccaneer S.2D -- United Kingdom (Royal Navy), 1987-1993, Sea Eagle
C.160D Transall -- Turkey (Air Force), 1971
C-12C Huron [King Air A200] -- Greece (Army), 1998
C-130E Hercules -- Saudi Arabia (Air Force), 1965, 9x
C-130H Hercules -- Libya (Air Force), 1971, 8x, 16x Ordered, 1-4x by 2022
C-130H Hercules -- Libya (Air Force), 1987, 1x, Tanker Conversion
C-130H Hercules -- Saudi Arabia (Air Force), 1974, 41x
C-130H Hercules -- United States (Air Force), 2008
C-130H-30 Hercules -- Egypt (Air Force), 1990, 3x
C-130H-30 Hercules -- Saudi Arabia (Air Force), 1984, 3x
C-130J Hercules -- United States (Air Force), 2010, LAIRCM
C-130J-30 Hercules -- Algeria (Air Force), 2022
C-130J-30 Hercules -- Australia (Air Force), 2005, MAWS, CMDS
C-130J-30 Hercules -- Australia (Air Force), 2009, RWR
C-130J-30 Hercules -- Australia (Air Force), 2015, LAIRCM
C-130J-30 Hercules -- Egypt (Air Force), 2022, 12x
C-130J-30 Hercules -- Indonesia (Air Force), 2023
C-130J-30 Hercules -- Tunisia (Air Force), 2013
C-130J-30 Hercules -- United States (Air Force), 1999
C-130J-30 Hercules -- United States (Air Force), 2010, LAIRCM
C-145A Combat Coyote [An-28 Copy] -- United States (Air Force), 2007, 5x
C-212-200 Aviocar -- Zimbabwe (Air Force), 1983, 14x
C-27J Spartan -- Greece (Air Force), 2004, 8x
C-295M -- Canada (Royal Air Force), 2022, 16x
C-295M -- Kazakhstan [1992-] (Air Force), 2013, 8x
C-295M -- Kazakhstan [1992-] (Border Guard), 2019, 1x
C-295M -- Philippines (Air Force), 2021, 5x
C-295M -- Senegal (Air Force), 2022, 2x
C-295MW -- Brunei (Royal Air Force), 2023
C-390 Millennium -- Netherlands (Air Force), 2018
Camcopter S-100 UAV -- Angola (Navy), 2022, 10x

Camcopter S-100 UAV -- Denmark (Royal Navy), 2022, PT-8 Oceanwatch
Camcopter S-100 UAV -- Iceland (Coast Guard), 2022, 2x, PT-8 Oceanwatch
Camcopter S-100 UAV -- Jordan (Air Force), 2011, 10x
Camcopter S-100 UAV -- Romania (Border Guard), 2022, PT-8 Oceanwatch
Camcopter S-100 UAV -- Thailand (Navy), 2019, 2x + 2x 2022
CC-130HT Hercules -- Canada (Royal Air Force), 1992, 5x
CC-144 Challenger 604B [A37] -- Canada (Royal Air Force), 2002, 3x
CC-144 Challenger 650 -- Canada (Royal Air Force), 2020, 2x
CE-133 Silver Star -- Canada (Royal Air Force), 1995-2005, 9x
CE-144 Challenger -- Canada (Royal Air Force), 1983, 4x
Cessna 150 -- Civilian (Civilian), 1958
Cessna 150 -- Philippines (Army), 1x
Cessna 150M Commuter II -- Civilian (Civilian), 1975
Cessna 172M Skyhawk -- Philippines (Army), 2x
Cessna 172RG Skyhawk -- Greece (Coast Guard), 2x
Cessna 172S Skyhawk -- Philippines (Navy), 4x
Cessna 172S Skyhawk [T-41D Mescalero] -- Turkey (Army), 25x
Cessna 182 Skylane -- Civilian (Civilian), 1956
Cessna 185 Skywagon [U-17] -- Greece (Army), 1965
Cessna 185 Skywagon [U-17B] -- Turkey (Army)
Cessna 208B Grand Caravan EX -- Tunisia (Air Force), 2022, ISR Upgrade
Cessna 421 Golden Eagle -- Zimbabwe (Air Force), 1976-1980, 1x, OOS Unkn
Cessna 421B Golden Eagle -- Turkey (Army), 1982, 3x
Cessna F406 Caravan II -- Greece (Coast Guard), 2000, 3x
Cessna U206 Super Skywagon -- Civilian (Civilian), 1964
Cessna U206 Super Skywagon -- Philippines (Army), 1-2x
CH-3 [Rainbow] UAV -- Turkmenistan (Air Force), 2016
CH-46D Sea Knight [CH-113 Labrador] -- Canada (Royal Air Force), 1963-2004
CH-46D Sea Knight [KV-107II-4]] -- Japan (Ground Self-Defense Force), 1966-2002, 42x
CH-46D Sea Knight [KV-107IIA-4]] -- Japan (Ground Self-Defense Force), 1966, 18x
CH-47D Chinook -- United States (Army), 2009, CMWS, M-130 Chaff/Flares
CH-47F Chinook -- Egypt (Air Force), 2022
CH-47F Chinook -- Saudi Arabia (Army), 2022, 2x 7.62mm MG
CH-47F Chinook -- Saudi Arabia (Army), 2022, 48x
CH-47F Chinook -- South Korea (Army), 2022, 18x
CH-47F Chinook [HT.17] -- Spain (Army), 2022, Defensive Systems Upgrade
CH-47F(l) Chinook -- India (Air Force), 2019, 15x
CH-47JA Chinook -- Japan (Ground Self-Defense Force), 2000
CH-53E Super Stallion -- United States (Navy), 1981
CL.89 UAV [AN/USD-501] -- Germany [FRG/Reunified] (Army), 1972-1990
CL-11 VTOL UAV -- Ethiopia (Air Force), 2021
CL-215 Scooper -- Greece (Air Force), 1975, Aerial Firefighting
CL-415GR Super Scooper -- Greece (Air Force), 1999, Aerial Firefighting
CN-235-100 -- Turkey (Air Force), 1996
CN-235-220 -- Senegal (Air Force), 2021, MPA
CN-235-220 -- South Korea (Coast Guard), 2015, 4x
CN-235-220M -- Malaysia (Air Force), 2022, MPA
CP-140M Blk 4 Aurora [P-3C Orion] -- Canada (Royal Navy), 2022
CT-155 Hawk -- Canada (Royal Air Force), 2012, Hawk 128, x17
CW-40D -- Malaysia (Air Force), 2022
Dash-8-100 [CT-142 Gonzo] -- Canada (Royal Air Force), 1987, 4x
DHC-5D Buffalo [CC-115 Buffalo] -- Canada (Royal Air Force), 1975-2022, SAR
DHC-5D Buffalo [CC-115] -- Canada (Royal Air Force), 1968-2022
Dhruv Mk1/2 -- Ecuador (Air Force), 2009

Diamond DA42M-NG -- European Union [1993-] (Border Guard), 2015, 1x, FRONTEX, FASS
 Diamond DA62 -- Civilian (Civilian), 2015, EU Version, Lower MTOW & Passenger Capacity
 Diamond DA62 -- Civilian (Civilian), 2015, US Version
 Diamond DA62 MPP -- European Union [1993-] (Border Guard), 2015, 1x, FRONTEX, FASS
 Do 228-101 -- Sri Lanka (Navy), 2022, Upgrade, EL/M-2022, 2x
 E-2D Advanced Hawkeye -- France (Navy), 2027, 3x, Air Refuelling
 E-2D Advanced Hawkeye -- United Kingdom (Royal Air Force), 2021, Air Refuelling
 E-3D Sentry -- Chile (Air Force), 2022, 3x Purchased from UK
 E-6B Mercury -- United States (Navy), 2022, Boeing 707-320, TACAMO, Blk II
 Eagle F.2 [F-15C] -- United Kingdom (Royal Air Force), 1983
 Eagle F.2 [F-15C] -- United Kingdom (Royal Air Force), 1990
 Eagle F.2 [F-15C] -- United Kingdom (Royal Air Force), 2002-2011
 EC.145 -- Kazakhstan [1992-] (Air Force), 2011, 14x
 EC.725 Caracal [H-36, Super Cougar] -- Brazil (Air Force), 2015
 EC-130H Compass Call -- Egypt (Air Force), 2001
 EC-130J TACAMO -- United States (Navy), 2026, 16x(?)
 EC-130V Hercules -- United States (Coast Guard), 1991-1993, Transferred to USAF
 EC-2 -- Japan (Air Self-Defense Force), 2022, Electronic Warfare / Training
