

Privacy Policy

5e Character & Tools

Effective Date: August 11, 2026

Summary: 5e Character & Tools is designed to work without requiring a user account and does not intentionally collect, sell, or store personal information on developer-controlled servers. Character data and settings are stored locally on the user's device unless the user chooses to export or share them.

1. Information We Collect

The App does not require account registration and is not designed to intentionally collect personally identifiable information such as your name, email address, phone number, precise location, contacts, photos, or payment information.

Information you enter into the App, such as character names, character statistics, notes, equipment, spells, or other game-related content, is treated as app content and is stored locally on your device unless you choose to export, share, or otherwise transmit it.

2. Local Storage

The App may store character data, preferences, generated files, and other app settings locally on your device so that the App can function and preserve your progress. The developer does not receive this locally stored information through the App.

You can remove locally stored data by deleting characters or files within the App where those options are available, clearing the App's storage through your device settings, or uninstalling the App.

3. Network Access and Third-Party Services

The App may connect to third-party services or public APIs to retrieve game-related content. When your device communicates with an external service, that service may automatically receive standard technical information such as your IP address, request details, device/network information, and timestamps as part of normal Internet communication.

Any information processed by a third-party service is governed by that third party's own privacy practices. The developer does not control the data-handling practices of third-party services.

4. Data Sharing and Sale

The developer does not sell personal information. The developer does not intentionally share personal information with advertisers, data brokers, or marketing companies through the App.

If you use an operating-system sharing feature to export a PDF or other file, the information is shared only with the destination, service, or person you select. That transfer is initiated by you.

5. Analytics and Advertising

The App is not intended to use personal information for targeted advertising. If analytics, advertising, crash-reporting, or similar third-party services are added in a future version, this Privacy Policy will be updated as appropriate to describe those practices.

6. Data Retention

Because the App is designed to keep user-created character data locally, the developer generally does not retain that content on developer-controlled servers. Locally stored information remains on the device until it is deleted by the user, cleared by the operating system, or removed when the App is uninstalled, subject to the device's backup and restore behavior.

7. Children's Privacy

The App is not designed to knowingly collect personal information from children. If the developer becomes aware that personal information from a child has been collected through a developer-controlled service, reasonable steps will be taken to delete it.

8. Security

The App uses standard platform and network mechanisms available through the operating system and its dependencies. However, no method of electronic storage or transmission is completely secure, and absolute security cannot be guaranteed.

9. Changes to This Privacy Policy

This Privacy Policy may be updated from time to time to reflect changes to the App, legal requirements, or third-party services. The updated version will include a revised effective date. Continued use of the App after an update means the revised policy applies to future use of the App.
