

p.1

Hi, I'm Sherry. Today I would like to introduce the project MyLog initiated by MyData community. And to describe how MyLog APP and LogBoard can help to support the front-line medical staff.

p.2

~~Pandemic is eased, but~~ In certain countries pandemic is eased, while it seems for others peak has been reached yet. The fight remains and COVID-19 virus will survive for at least 12 or 18 months long according to the Harvard scientists.

When the border is re-opened, every traveller needs to be quarantined for 14 days for each travel.

p.3

p.4

Easy to get started. In just a few clicks, you can easily log to the app to record your symptoms should they be similar to covid19. You may also snap capture a photo to record your life which will allow you to remember what you have done in the past few days.

The time and location are logged automatically by the app locally on the device every time when you create a new record, and you may easily check out your activities from the daily report! You have absolutely full control of your data privacy, in compliance with the MyData Governance Framework.

2020/6/4 MyData Call

p.1

Hi, I'm Sherry from Taiwan. This is the forth time I shared the project MyLog initiated by MyData community in this call.

In today's call, I will describe how MyLog APP and LogBoard can help to support the medical staff and combined to build a Personal Health Passport

p.2

First, what is mylog? Mylog is composed by 2 component, 1 is MyLog APP, the second component is LogBoard. LogBoard is created for medical staff. it use visualized data dashboard to provide the supporting information record by MyLog for medical staff.

So If you use MyLog app to record your own health status, once needed, you can share your record to the medical staff and they can view the statistics of your record for the past 14 days.

Both MyLog APP & LoagBoarf is *compliance with MyData Governance Framework*

p.3

LogBoard helps medical staff to see the data users shared. It uses one-time URL and all data is deleted automatically after 72 hours.

Users manage and give consent to share their data to medical staff. Medical staff can analyse and review data for analytical and research purposes.

p.4

Easy to get started. With a few clicks, you can easily log to the app to record your body temperature and symptoms you have, like coughing or some symptoms similar to covid19. You may also snap capture a photo to record your life which will allow you to remember what you have done in the past few days.

p.4

The time and location are logged automatically by the app locally on the device every time when you create a new record, and you may easily check out your activities from the daily report! You have absolutely full control of your data privacy, in compliance with the MyData Governance Framework.

p.6

Both MyLog App and LogBoard have multi-language support! English, French, Japanese and of course, traditional Chinese. If you want MyLog should support more language, please join us!
