

WordPress Contact Form 7 Plugin Problem

I am using Contact Form 7 version (4.7) in Wordpress

I am using x10hosting (free hosting)

Email works, I get all the information.

The problem is the "from line" in the email says

From "**WordPress**" and when I open the email and expand on the from in the email the whole line reads:

WordPress <x10host@jeromegreene55.byethost14.com>

In the settings under the **mail tab** in the plugin the from definition looks like this:

FROM <x10host@jeromegreene55.byethost14.com>

My email account under my cPanel has the following:

x10host@jerome1greene.x10host.com

In the cPanel when I try to define an email account that definition looks like this:

Email _____ @jerome1greene.x10host.com

Question how do I fix the from subject so it read **x10host** and not **WordPress**?

1) Change

From line in the Contact Form plugin looks like this now:

FROM byethost14 <x10host@jeromegreene55.byethost14.com>

Now I get no email at all

Remember my email account under my cPanel has the following:

x10host@jerome1greene.x10host.com

2) Change

From line in the Contact Form plugin looks like this now:

FROM x10host <x10host@jeromegreene55.byethost14.com>

I receive no email

3) Change

From line in the Contact Form plugin looks like this now:

FROM x10host <x10host@jerome1greene.x10host.com>

When I try to save it I get the following error message:
Sender email address does not belong to the site domain.

Additional Information

I only have two email address

My Domain:

jerome1greene.x10host.com

Account @ Domain:

x10host@jerome1greene.x10host.com <---- created this under cPannel email account.

Is this a email account?(1)

The only other email is the one I sign in with (2)

Do I use my sign in email address in the contact form?

****Note** I have tried to get help from xhosting forums and two other forms.
Looks like I have them stump

New piece of my puzzle.

I was able to send email from my X10hosting to my home account and received it.

The from line read "from:jerome1g@xo3.x10hosting.com"

User Name jerome1g Server Name xo3.x10hosting.com <----- name of my inbox

Then just for kicks I did a reply to it to see if that would work. And this is what the email message I received from my personnel email account:

Message not delivered

There was a problem delivering your message to

jerome1g@xo3.x10hosting.com. See the technical details below, or try resending in a few minutes.

The response from the remote server was:

550 You do not have sufficient privileges to send mail to this address. Please authenticate and try again.

Final-Recipient: rfc822; jerome1g@xo3.x10hosting.com

Action: failed

Status: 5.0.0

Remote-MTA: dns; xo3.x10hosting.com (198.91.81.3, the server for the domain.)

Diagnostic-Code: smtp; 550-You do not have sufficient privileges to send mail to this address. Please

550 authenticate and try again.
