Meta Description: Revenge MD's XEOMIN is a popular facial rejuvenation treatment capable of improving the appearance of wrinkles and fine lines in Las Vegas, NV.

Xeomin in Las Vegas, Nevada

The aging process is unavoidable, but with Xeomin, you can age gracefully. This innovative cosmetic injection induces facial rejuvenation by targeting the root cause of wrinkles and correcting them. Made from botulinum toxin type A, Xeomin is a prescription medication injected into the facial muscles for temporarily improving the appearance of moderate to severe frown lines between the eyebrows (glabellar lines) in adults. In addition, Xeomin is sometimes used to treat forehead creases or crow's feet around the eyes. Xeomin is praised for the purity of its formula—making it a preferred treatment over Botox. Additionally, Xeomin is cheaper than Botox, especially when you select Revenge MD, which offers 50 units of Xeomin at just \$365.

Learn more about the anti-aging injection Xeomin and how it relieves facial furrows and new wrinkles by relaxing overlying skin and rejuvenating your appearance. Revenge MD is the #1 provider of Xeomin in Nevada, with locations serving Henderson, Las Vegas, and Reno. If you live in those areas and want to experience safe, effective cosmetic injectables, including dermal fillers and Botox performed by an extensively trained professional and licensed injector, contact us today for a consultation. Call 703-218-1083 (Las Vegas) or 775-983-5630 (Reno) or contact us online to learn if Xeomin is right for you.

Facial Rejuvenation Benefits of Xeomin

- FDA approved cosmetic procedure
- Treats moderate to severe frown lines between the eyebrows (glabellar lines)
- Sometimes used to treat moderate fine lines on the forehead and crow's feet
- Convenient 10-20 minute treatment sessions
- Temporarily smooths facial lines and wrinkles
- Prevents further wrinkling
- Scientifically proven

Xeomin Before and After*

The Xeomin before and after results show the impressive anti-aging results possible with this filler. As with all dermal fillers, results will vary per person.* However, each image shows actual results from real people after their Xeomin treatment at Revenge MD. This powerful and pure injection allows each client to achieve a more youthful, rejuvenated appearance in quick, effective treatments.

INSERT BAS

Understanding Dynamic Wrinkling

Dynamic wrinkles, also known as expression lines, often form due to repetitive facial expressions. For example, every time we frown, scowl, laugh, smile, or cry, our muscle movement causes the skin attached to those muscles to always move with them. Over time, this creates creases and wrinkles which significantly age your facial appearance.

Even when our face is “at rest,” those lines are still visible. Lines like the frown lines between the brows can often have a negative effect on your appearance, causing you to look upset or angry.

How Xeomin's Formula Relieves Wrinkles and Creases

Xeomin injections enable those muscles responsible for dynamic wrinkles or expression lines to relax, causing the skin to smooth out and reduce the appearance of those visible creases and lines.

Xeomin is an injectable prescription medication similar to Botox. However, it is unlike other neurotoxins as it is considered a “naked” injectable and contains no additives or proteins. This makes Xeomin perfect for people who are resistant to or have previously experienced problems with other injectables. As always, speak with your medical provider about the difference between the formulas to ultimately decide which is best for your body and your aesthetic goals.

Xeomin relieves and improves the appearance of moderate to severe lines between the eyebrows. In addition, it also reduces visible frown lines, forehead lines, and crow's feet around the eyes.

Xeomin Reviews

Xeomin injections were proven effective through two randomized, double-blind, multicenter, placebo-controlled clinical trials. These trials included 547 healthy adult patients. The average age of each patient in the study was 46 years of age. Each patient received 20 units of Xeomin and was classified as responders if they had a 2-grade improvement on a 4-point scale as assessed by the physician and patient. Using that criterion, treatment success was higher with Xeomin than the placebo on Day 30 in both studies (60% and 48% vs. 0% for placebo in both studies).

Based on these trials, Xeomin® received FDA approval for use in glabellar lines in 2011.

Xeomin Treatment Experience

Xeomin treatments usually take 10-20 minutes. No anesthesia is required; however, your doctor may use a topical anesthetic or a cold pack to reduce discomfort. The Xeomin Botulinum Toxin formula is injected into the treatment areas using a fine needle. During your consultation, you receive a personalized treatment plan that details your

Xeomin injections. During this time, you can also speak in-depth about what to expect during your anti-aging injection treatment and how best to prepare for the experience.

Xeomin Results*

Most patients can expect visible results as early as 3-4 days after your injection. The first onset of effect is less than a week. The maximum effect occurs at 30 days. The typical duration of Xeomin effects is up to 3 months but may last significantly longer or shorter depending on the person. As always, individual experiences will vary.*
