

[Stealth Cam G42 No-Glo Trail Game Camera STC-G42NG](#)

Trail cameras used to be very expensive pieces of equipment, and almost impossible to get your hands on.

Nothing could be further from the truth today.

Now, thanks in large part to major advances in the videography technology available at ridiculously low prices, anyone and everyone has the opportunity to get their hands on a quality trail camera for next to nothing – which is why we are all able to take advantage of everything that the Stealth Cam G42 No-Glo Trail Game Camera STC-G42NG brings to the table.

First Impressions

At first blush, the Stealth Cam G42 No-Glo Trail Game Camera STC-G42NG stands out from the rest of the pack with just how compact and rugged it looks – even before you get your hands on it.

One of the smallest Trail cameras (for example: [MOULTRIE M-888](#)) that you're going to come across today, but certainly one of the most capable, this is everything that most outdoorsmen have been searching for and then some.

Filled with advanced technology, the ability to record in HD resolution, night vision capabilities, multi zone and motion detection sensors built right in, and with GPS stamping on every single image or video taken, there's almost no reason to go with any other trail camera than this one.

Overall Design

As mentioned above, this particular camera is very compact and well designed.

About the same size as a paperback book (and just a little bit thicker), you're going to be able to mount this camera to pretty much anything and everything imaginable to give you the rare opportunity to record all the nature and wildlife that your camera has the opportunity to pick up in its lens.

The user interface is intuitive (we'll touch on that in just a moment), but the rugged durability of this camera really cannot be overstated. This thing feels indestructible!

Ease of Use

The Stealth Cam G42 No-Glo Trail Game Camera STC-G42NG has definitely been designed to be used by those that aren't exactly tech savvy, and that isn't a bad thing!

All of the controls on this particular solution have been simplified dramatically, while still giving the user infinite options to customize so that they'll be able to record nature exactly as they intend to.

On top of that, the controls of this device can be manipulated even while wearing gloves, something that a lot of early morning or dusk outdoorsmen are going to appreciate.

It's also nice to know that you'll be able to use this camera in the winter time without losing a digit or two to frostbite!

Picture Quality

The picture quality on this camera is absolutely stunning, with multiple resolution settings available that range from two megapixels all the way up to 10 megapixels for still images and full high definition for short blast video clips.

The lower the resolution setting, the more photos and videos that you'll be able to take, as higher definition options are going to eat up storage faster than normal. At the same time, you are always going to have the opportunity to record quick frame by frame images or clips of video (with audio) that range in duration from between five and 180 seconds.

You aren't going to have any trouble whatsoever sharing all of the videos and images that you capture with this camera on social media. The quality is top notch, and people are going to really be impressed with the images and video that you're able to capture.

Special Features

Of all the many special features that the Stealth Cam G42 No-Glo Trail Game Camera STC-G42NG brings to the table, one of them stands head and shoulders above the rest of the pack.

We're talking of course about the matrix Advanced Blur Reduction Technology built right into this amazing trail camera. This technology is going to result in the crisp best and most impressive lowlight pictures and videos taken. It's also going to give you the opportunity to capture media even when there is no moon or stars to provide any lighting whatsoever.

Final Verdict

It really doesn't get all that much better than the Stealth Cam G42 No-Glo Trail Game Camera STC-G42NG when it comes to Trail cameras.

If you are serious about getting your hands on a quality piece of technology for next to nothing (you just can't beat that price tag), this is something that you want to seriously consider.
