I am the lead developer for some of the most popular tools in my field. All of these are open source and provided under a permissive license. This allows other teams to understand and extend the algorithms. I have an A+ Github Stats rating.

- My MRIcro software was a seminal visualization tool, and the publication describing it has been cited over 2800 times.
- My MRICron software has consistently been the top download from the NeuroImaging Tools & Resources Collaboratory
<https://www.nitrc.org/top/toplist.php?type=downloads>
- My dcm2niix tool is the most popular tool for converting data from complicated medical formats to simple scientific formats. Evidence for the popularity include 900 stars, 229 forks and more than 50 other tools that depend on it
<https://github.com/rordenlab/dcm2niix>
- My MRIcroGL voxel viewing tool showcases leading edge methods. It has 207 stars, 33 forks and the technologies involved are being evaluated for the next releases of core tools in our field (FSL and AFNI) <https://github.com/rordenlab/MRIcroGL>

Funded Research Support

Internal support listed in *Italics*. While I think extramural funding is a strong indicator for competitive research, I wish to highlight the collaborative nature for the internal awards I have sought. Note that my current salary support exceeds 12 months per year, and I am following the overcommitment plan I described with RF1-MH133701. The proposed competitive renewal of P50 DC014664 does reduce my effort from 5 to 3 months per year.
