

Abstract # (to be assigned – do not alter)

Characterization of XYZa from Drosophila melanogaster, an enzyme with a unique architecture and novel function

Judith A. K. Howard¹, Percy L. Julian², Dorothy M. Crowfoot Hodgkin¹

1 Department of Chemistry, University of Oxford, Oxford, UK

2 Department of Chemistry, Howard University, Washington, DC, USA

Please replace the sections above with your abstract title, authors, and affiliation(s). Bold the presenting author(s). If all authors are from the same institution, delete the superscripts and numbers before the institution lines. If needed, add more superscripts and institution lines. Students: do not forget to include your PI's name! Replace this section with your abstract body text. Your abstract will be published exactly as it is submitted, so pay close attention to formatting for chemical formulas, species names, special characters, etc. Do not include images. You are allotted one page. Please maintain the existing font size, font face, bold/italics, spacings, justifications, etc. throughout this template. Save this file as a .docx with the presenting author's last name appearing first in the filename (for example: howard_mecc2026.docx). Submit your completed abstract to the MECC website at <https://mecc2026.midwestenzyme.org/abstracts> (requires a Google account). Questions pertaining to the abstract submission process and document formatting can be directed to Paul Cook at vp@midwestenzyme.org.
