Good afternoon!

Hope you had a restful long weekend. A few months ago we sent out a flipped faculty meeting through EdPuzzle. EdPuzzle is a great video editing tool to engage your students while getting formative feedback during the video. Students are held accountable and have to watch the entire video and answer questions during the video - wherever you want them. You can embed the EdPuzzle videos into Canvas and just create the quiz questions there, too. (Thanks, Mr. Alcala!) Click here if you are interested in learning more (or email me and set up a time for me to walk you through it!): http://bit.ly/EdPuzzleTTT Check out some of our teachers' examples at edpuzzle.com (create an account with your Google sign-in and choose Frederick Douglass as your high school.)

Another option is that teachers can use the videos in EdPuzzle to flip their classroom for more assessment, activity and relationship-building time during the block. BUT... if you are going to flip your classroom, please be responsible in doing so. Many teachers have failed miserably when not using this model correctly. EdPuzzle has a Flipped Classroom module in their certification section - they are based on https://flippedlearning.org/. Here is the review of EdPuzzle:
https://www.commonsense.org/education/website/edpuzzle-teacher-review/4004456

Our very own Mrs. Snow will be giving a PD next Tuesday, January 29th in the C100s common area on EdPuzzle at 3:30 pm. Come have some refreshments and receive a PD certificate while learning about EdPuzzle hands-on!
