

I just graduated with my MS in Applied Math from SDSU, where I did research on neural networks. I've tutored in community college, worked at math summer camps throughout my undergrad, and was a TA throughout grad school, so I'm very excited to be running my own class for the first time! This year, I'll be teaching Algebra 2 at Torah High, Intro to Stats at Southwestern Community College, and tutoring full time at Revolution Prep. In my free time, I play bassoon in various ensembles throughout San Diego, cook and bake when I need a break from the world, play board games and video games with friends, and hang out with my husband and our two cats.
