

Foundations of Programming: Head Start Code:

1.03 - Printing Strings

Directions: Use the pseudocode below to help write the assignment code. You do not need to write your own pseudocode for the assignment, but be sure to say that you used the head-start code to receive credit.

Remember, pseudocode is just the recipe - you are responsible for mixing the ingredients and 'baking' the code! If you need help with this part, please attend a tutoring session or call me - I would be happy to help!

#Your name

#The Date

#The purpose of the code

#create main() function
def main():

 #be sure to indent

 #write type out five print functions

#calling main() function
main()

#Don't forget the PMR!
