**ENGLISH ABSTRACT**

Please note that the abstract must include an introduction, research objectives, methodology, findings, conclusions, and research recommendations. Kindly ensure that the abstract does not exceed 250 words.

Keywords:

**ABSTRAK BAHASA INDONESIA**

Harap diperhatikan bahwa abstrak harus mencakup pendahuluan, tujuan penelitian, metodologi, hasil temuan, kesimpulan, dan rekomendasi penelitian. Mohon untuk memastikan bahwa abstrak tidak melebihi 250 kata.

Kata Kunci:

## Manuscript Submission Standards:

1. The Scientia Biologica Indonesia encompasses multidisciplinary studies on ecology, conservation, biodiversity, Sustainable Agriculture, and natural resource management on land. This journal welcomes original research contributions addressing various aspects of terrestrial life, including interactions among land organisms, ecosystem dynamics, adaptations to environmental changes, and human impacts on terrestrial ecosystems. Its scope also includes understanding of global ecology, land management, habitat restoration, and terrestrial ecosystem sustainability.
2. The manuscript is free from plagiarism and other unethical attitudes.
3. The author ensures that the manuscript has never been published in other periodicals.

## General Requirement:

1. Manuscripts are written using Microsoft Word versions from 2011 to 2019.
2. Manuscripts are written in English.
3. The title of the manuscript must be no more than 15 words starting with a capital letter
4. Manuscript refers to the writing guidelines.
5. Font type Times New Roman size 11 with line spacing 2.0.
6. The 10-20 page text includes references.
7. Manuscripts have a similarity rate of less than 15%.
8. Manuscripts use references from the last 10 years, at least 80% come from accredited online journals or reputable international journals.
9. Manuscripts are required to use Mendeley, Zotero, and Endnote with APA Style 7th Edition.

## **INTRODUCTION**

**(12 pt, bold, center, capital letter)**

The author mentions adherence to the format and style guidelines outlined by SBI. Scientia Biologica Indonesia offers standardized templates for manuscript preparation, which require manuscripts to be composed in English, utilizing Times New Roman font at 11pt size, double-spaced, and formatted into a single column. Titles, abstracts, tables, and charts/images are to be formatted with single spacing. Manuscripts are expected to span 7-12 pages, formatted to A4 size with 25 mm margins. Within the introductory segment, the author is expected to expound upon the research's contextual background, delineate the research quandaries, survey pertinent literature, conduct a gap analysis, and elucidate the research objectives.

## **MATERIALS AND METHODS**

**(12 pt, bold, center, capital letter)**

### **Location and Time (12 pt, bold, center)**

The author transparently and forthrightly delineates the specific locations and settings of the research, encompassing villages/cities, sub-districts, districts, and provinces.

### **Tools and Materials (12 pt, bold, center)**

The author must clearly state the tools and materials used during the research

### **Population and Sample (12 pt, bold, center)**

The population represents a broad area of study comprising objects/subjects with specific quantities and characteristics identified by the researcher for investigation and subsequent conclusions. In this context, the population encompasses not only individuals or living organisms but also includes other natural entities. It encapsulates not just the quantity of entities within the object or subject of study but also encompasses all the characteristics and properties inherent to those entities.

Meanwhile, the sample constitutes a subset of the population, possessing similar characteristics and quantities as the larger population or a representative portion thereof, selected through specific procedures. When studying a large population, researchers may encounter constraints such as limited funds, resources, labor, and time, rendering it impractical to study the entire population. Therefore, researchers employ samples drawn from the population to facilitate more feasible and manageable research endeavors.

### **Research Procedure (12 pt, bold, center)**

Clearly and succinctly outline the structured research procedure using Times New Roman font at 11pt size. The research procedure delineates the sequential steps employed to gather data aimed at addressing the research inquiries posed in the study, encompassing the preparatory, implementation, and reporting stages.

### **Research Variable (12 pt, bold, center)**

Clearly elucidate the variables under investigation utilizing Times New Roman font at 11pt size. A research variable pertains to a focal point of inquiry exerting influence and possessing value. Variables represent quantities capable of alteration or modification, thereby exerting an impact on events or research outcomes.

## **Data Analysis (12 pt, bold, center)**

Data analysis must be articulated thoroughly, authentically, and accurately. Data analysis entails a series of procedures including examination, cleansing, transformation, and modeling of data with the objective of extracting valuable insights and arriving at conclusions that substantiate the research findings.

## **RESULTS AND DISCUSSION**

### **(12 pt, bold, center, capital letter)**

The results should offer a clear description of the findings without redundancy in tables and numerical data. Sufficient and thorough data presentation should be supplemented with various measures of variability (such as SD, SE, etc.) and levels of significance (e.g.,  $p < 0.01$ ), facilitating the reader's interpretation of the experimental outcomes.

### **Figure Example (12 pt, bold, center)**

**Fig 1. Example (10 pt, bold, center)**

### **Table Example (12 pt, bold, center)**

**Table 1. Example (10 pt, bold, center)**

<b>Name</b>	<b>Type</b>	<b>Material</b>	<b>Percentage</b>
-	-	-	-
-	-	-	-
-	-	-	-
-	-	-	-

Figures and Table should be numbered as follows: Fig. 1:, Fig. 2:, ... etc Table 1., Table 2., ....etc.

### **Graph Example (12 pt, bold, center)**

The image title (10pt) should be concise and easily understandable, positioned beneath the image, and numbered using Arabic numerals. Symbols and explanations of figures and charts should be provided within the title. Images and charts need to be displayed in high resolution. Bar charts should be depicted in a straightforward 2-D format. The discussion section should distinctly outline the circumstances, phenomena, and events observed during the research period, accompanied by pertinent literature references.

## CONCLUSION

**(12 pt, bold, center, capital letter)**

The conclusion should be succinctly encapsulated within a single paragraph, summarizing the experiment's findings in no more than 200 words. If deemed necessary, recommendations may also be included alongside the summary of results.

## CONFLICT OF INTEREST

**(12 pt, bold, center, capital letter)**

A declaration affirming the absence of any conflicts of interest with any involved parties regarding the manuscript's subject matter.

## REFERENCES

**(12 pt, bold, center, capital letter)**

The reference (11pt) list is organized alphabetically by authors' names and the year of publication, prioritizing sources published within the last decade, with at least 80% sourced from scholarly journals. Utilization of reference management software like Mendeley, Zotero, and EndNote is encouraged, following the APA Style 7th Edition guidelines.
