Gardens Template Requirements

This document describes the requirements for an Aragon template based on the ideas outlined in the [Gardens Project](#) document. At a high level the goal is to create an Aragon template which allows for a **public community to coordinate resources and make decisions both effectively and collectively.**

The template combines concepts from [Moloch](#) and [Commons Stack](#) and leverages many existing Aragon Applications.

Applications

Token Manager

Fundraising

- Presale
- Automated Market Maker (Batched Bancor)
- Tap
- Agent

Dandelion Voting

Redemptions

Toll Gate

Conviction Voting

Vault

Permissions

The internal permissions/connections between the **Fundraising** apps should be the same as in Aragon Black's [fundraising template](#) except that all permissions which are granted to the Committee or Token Voting are instead granted to **Dandelion Voting**.

Additionally, **Dandelion Voting** should be considered the root authority in the organization, it should be the permission manager for all permissions, and be assigned to most permissions with notable exception of the following:

App	Permission/Action	Grantee	Manager
Dandelion Voting	Create Votes	Toll Gate	Dandelion Voting
Toll Gate	Forward	Any Entity	Dandelion Voting
Vault	Transfer	Conviction Voting	Dandelion Voting
Conviction Voting	Create Proposal	Any Entity	Dandelion Voting
Fundraising	Sell	Any Entity + Dandelion Voting Oracle	Dandelion Voting
Redemptions	Redeem	Any Entity + Dandelion Voting Oracle	Dandelion Voting
