Please select your favorite clothes and analyze the fiber materials of the clothes that it is composed of.

In particular, the tag in the clothes will help you to identify the clothes material in detail. You can find any information of fiber materials from the company or inside care label tags describing the treatments. Please clarify why specific care, which is written in the care label, is required for fiber materials in your favorite clothes.

Our lab can assist you in identifying the fiber materials using FT-IR and microscopic examination(please reserve your spots in google calendar).
