

ROR Developer

Job Description

- 2+ years of demonstrated experience in medium-to-large scale software development projects that involve backend development and mentoring new and junior team members.
- A strong familiarity with service-oriented and microservice architectures.
- Experience developing software that relies abundantly on the use of containers.
- A demonstrated deep understanding and proven ability using SQL.
- Experience with cloud-native applications and major cloud vendors like Azure, AWS, or GCP.
- Experience with any frontend technology.

Required Skills

Experience with the Ruby on Rails framework,
Familiar with Kubernetes, CI/CD
