

Here are some bits that didn't fit into the other guides

 <p><b>Devices</b> Secure corporate data on devices</p>	<p>This lets you manage any chromebooks or other devices that are attached to your Google domain. This is quite complicated and in-depth and may be covered in a later blog post</p>
 <p><b>Security</b> Configure security settings</p>	<p>In here you can enforce password policies e.g. making sure that everyone has a strong password</p>
 <p><b>Reports</b> Monitor usage across your organization</p>	<p>Here you can get reports on how many files have been created, how many emails have been sent and lots more too.</p>
