- AON

**About** (описание компании)

## ***Направление компании:***

Компания занимается прокладкой низковольтного кабеля, установкой проекторов, телевизоров, микрофонов, оборудованием конференц залов полностью автоматизированной системой связи (типа как умный дом, но тут умный конференц зал). Ниже фотография на которой изображена выполненная работа в одном из конференц залов напичканная практически всем что мы делаем.

## ***Для чего сайт?***

Для того чтобы выделиться на фоне конкурентов и дать клиенту понять с ходу какие услуги мы предоставляем и что уровень этих услуг соответствует качеству сайта

## ***Немного отсебятины:***

Основная цель сайта, это выделиться на фоне конкурентов. С первой страницы зацепить клиента и внушить что мы выполним интересующую его услугу лучше чем кто-либо из конкурентов.

Дело в том, что для получения заказа даже сайт не особо нужен, все происходит на словах и по звонку.

Вторая цель сайта, чем-то зацепить/запомниться, чтобы когда возникает мысль "нужно нанять кого-нить для "Audio Visual" происходила ассоциация с нами.

## Обязательные тексты на страницах

### Services

“ Technology is great. It can help your business run more efficiently and can provide a great experience for your clients and customers.

“ Skygic specializes in creating the following types of projects for government, law enforcement agencies, education, business, energy, transport, sports, and healthcare spheres

### Audio Visual

(ТЕКСТ НЕ ГОТОВ)

### Collaborative Spaces

“ Collaborative space is the key to successfully work on new ideas, initiatives, and projects. It provides an opportunity for participants in business meetings, congresses, and seminars to easily negotiate, vote for the necessary decisions, and also comply with the established rules of the event.

“ We will make the equipment usage simple and convenient, all the systems will be combined with a common control system. You will be able to demonstrate images from multiple portable devices (laptops, tablets, smartphones) simultaneously, provide the ability to collaborate with the displayed content, exchange text messages and media files between participants, etc.

We also provide:

Elimination of audio and video noise

Synchronization of equipment

Testing equipment operation in different modes

### Sound Masking & Paging

*“2/3 of employees could work better if their office became quieter”*

*‘Distracting noise - complaint # 1 of all employees of open-space offices.’*

A large office always faces workspace planning challenges. The first thing is the noise in open space rooms with areas for communication, conferences, phone calls, etc. A definitive solution to the problem of noise is sound masking.

Sound masking systems help to solve this problem. The systems help increase the privacy of conversations, reduce the distraction of noise, and thereby increase efficiency in the workplace.

Confidentiality of negotiations. To ensure the confidentiality of meetings and conferences, the sound masking system is installed around the perimeter of the room.

Reducing noise. These solutions have already proven their ability to reduce employee fatigue while enhancing privacy between offices.

Features of the Sound Masking implementation. A guarantee of the effective operation of the sound masking system is a high-quality measurement of the acoustic space and individual adjustment of the parameters. Our engineers use only high-quality metering instruments and well-proven Cambridge Sound and Atlas IEDs.

## **STRUCTURED CABLING**

***'It makes things much easier to manage '***

Structured cabling (or voice and data cabling, structured cabling, wiring, network cables) is the basis of the information infrastructure of any enterprise, which makes it possible to place many services for various purposes in one system: telephone networks, security systems, video surveillance, etc. That is why the role of structured cabling is so important when building a corporate information system.

It allows to:

- combine telephone, computer networks, security, and video surveillance systems into the single information space;
- manage a centralized system from anywhere in the world;
- significantly simplify the management and administration of the office.

We offer an effective tool for the prompt exchange of necessary information and take full responsibility for the quality of the installed network cables. Our engineers work only with high-quality tools of the leading companies, such as MP Netconnect, Cabeus, Hyperline, ITK, etc.

## About

***‘We keep our word and take pride in our work.’***

Whether you're seeking medical equipment installation or commercial automation for your business, we're ready to provide the technology and solutions that are right for your needs. SkyGic brings vast experience in Audio and Video technology installation to the table for the successful implementation of technical AV solutions in complex new construction and renovation projects. Our company guarantees you the high quality of the supplied equipment, as well as an attentive approach to customers and strict adherence to any term of the Agreement.

### **Skygic mission**

We strive to create success by helping our mission-aligned clients improve flexibility and the ability to quickly adapt their businesses to the new challenges and conditions. We achieve this goal by applying new IT technologies, improving work processes, providing access to high-quality data.

### **Our team**

The highly skilled team of certified Skygic specialists has a large number of successful projects. A significant advantage of our global team is the use of the best world practices and international standards of project management, as well as the constant building international expertise of projects and industry competencies. We are always eager to help and provide the client with the best possible service under immense time pressure.
