

## Reflection on Picasa®

Picasa??

Picasso??

Picasa® is free software that makes it easy and fun to view, organise, edit and share the digital photos on computer or laptop. I am using Windows Paint® to edit my photo before using the Picasa®. Windows Paint® is an easy program to use but it has limited tools during editing. Dr. Sadiyah binti Baharom introduced Picasa® to us during ICT in science education. After install this software, Picasa® organises my entire collection (photo, diagram, scanned pictures) and automatically sorting them by date and category into a single library. Compare to Photoshop®, Picasa® is not just free but simple and user friendly. Now, I can find another photo in my laptop or driver that connected to my laptop without leaving or minimizing the application. I can add captions to the selected pictures, pan and zoom and use 12 new lighting and colour effects.

If you want the best and most powerful photo editing tool, Photoshop® is the choice. But, if you just want the basic and economic, I recommended you with this free and user friendly photo editing tool, Picasa®.
