

Terraform Industries, Inc.

Reactor Injection System Lead

terraformindustries.com

Los Angeles, California

Do you have a principled yet inexplicable vendetta with Omega?

Are you unsure which part of the term “Mass Flow Controller” is the biggest lie?

Are you at home in the heart of the machine?

At Terraform Industries, we’ve made cheap synthetic natural gas from sunlight and air. We’ve demonstrated a revolutionary fixed displacement injection control process. Now it’s time for you to take the lead and scale this up for methane, methanol, ammonia, and other products. Most of the Terraformer operates at ambient pressure, but thermocatalysis often requires high pressures, and that’s where the injection system shines.

More generally, we are determined to conquer the primary energy consumption layer of our entire civilization. We’ve developed the tech needed to pipe pure solar photovoltaic direct current electricity into intermittent primary materials production at the lowest possible cost, limited only by the laws of physics. Our total addressable market is about 500 TW, and we think you will enjoy helping us complete our mission.

Mission

Your mission is to take over development of the Terraform reactor injection system, pushing it to greater heights, lower costs, and higher productivity. The injection system stores, assesses, meters, and compresses our low cost reagent gasses, to 10 bar, into various reactors. They sit at the cross roads of the machine and bear responsibility for their safe and efficient operation.

The Reactor Injection System Lead reports directly to the Technical Director.

Responsibilities

- Take full ownership of the ongoing design, development, and deployment of our low cost injection system
- Complete the design and deployment of the full scale injection system demonstration unit, as well as begin serial production, in 2025
- Design and/or oversee any electrical, mechanical, fluid, and thermal systems associated with the process
- Mechanical design with a bias for manufacturability and scalability
- Own the injection process delivery timeline and success from inception to integration

- Lead and participate in internal technical design reviews and push for rapid iteration
- Source, evaluate, and integrate key components for rapid prototyping and production
- Lead recruitment efforts for your team, and actively contribute to team career development

Qualifications

- Bachelor's degree in mechanical engineering or aerospace engineering or equivalent
- 5+ years of professional experience in mechanical design and analysis
- High level proficiency in thermo/fluid systems
- 2+ years of experience and strong intuition with electro-mechanical systems
- Demonstrated history of effectively managing design projects from conception to implementation, including working with cross-functional teams and managing vendor relationships
- Demonstrated ability to intuitively or analytically arrive at self-evidently correct designs

Preferred Qualifications

- 2+ years experience with hydrogen
- Familiar with high-volume manufacturing processes and experienced in sourcing and procuring parts on a large scale, ideally on more than one class of factory
- Knowledge of international engineering standards and experience in validating and qualifying designs for demanding outdoor environments
- Ability to work in fast-paced, demanding iterative design and manufacturing environments

Logistics

Location - Terraform Industries is based in the castle building in Burbank, near Los Angeles, California. Work is 100% on site.

Remuneration/benefits - Terraform Industries is proud to offer a competitive benefits package including: equity, performance bonuses, 401k, health, dental, and vision insurance, and a flexible leave policy.

Pay range: \$120,000.00 - \$220,000.00 per year, to be determined on a case-by-case basis based on job-related knowledge and skills, education, and experience.

Travel - Some travel (5-20%) may be required to oversee installation off-site.

Terraform Industries is an Equal Opportunity Employer; employment with Terraform Industries is governed on the basis of merit, competence and qualifications and will not be influenced in any manner by race, color, religion, gender, national origin/ethnicity, veteran status, disability status, age, sexual orientation, gender identity, marital status, mental or physical disability or any other legally protected status.

Apply

Email recruiting@terraformindustries.com with a compelling one pager with your best evidence of execution ability. We are fans of your work, so include YouTube links, photos of hardware, etc. In addition to your one pager, you should include a one page [resume](#) of no more than 300 words.
