Description

Ventolin (generic name: Albuterol / Salbutamol; brand names: Ventorlin / Asthalin / Proventil / ProAir / Salamol / Aerolin) is a bronchodilator used for treating or preventing breathing problems in patients who have asthma or certain other airway diseases. Ventolin inhaler is called a 'reliever puffer' as it provides quick relief from sudden asthma attacks.

Ventolin is indicated for the relief and prevention of airway obstruction (bronchospasm) in patients with asthma and in patients with exercise-induced asthma. Ventolin can also be used in treating patients with emphysema and chronic bronchitis when their symptoms are related to reversible airway obstruction.

Ventolin works by relaxing the smooth muscle in the airway, which allows air to flow in and out of the lungs more easily.

The inhaled form of Ventolin starts working within 15 minutes and can last up to 6 hours.

Read the Full New Idea Article [here](#). (Background Music) I Bid You Goodnight by Joseph Spence (The Bahamas) Good point. I have often said that one of the strengths of a good BNI chapter is that many of the members are friends, and one of the weaknesses of a good BNI chapter is many of the members are friends. Its both a strength and a weakness.

Albuterol ipratropium inhaler

In Part 1, we saw how this gives rise to a curious understanding of God's relationship to the universe: God must have been causally, but not temporally, prior to the universe, and then must become temporal so that he can interact in human history.
