Computers 8

04 October 2018

Technology has changed a lot during my lifetime

From 2005 to 2018, a lot has changed with technology. For instance, the first Apple iPhone was invented in 2007, combining a mobile phone, an iPods touch screen, and internet communication. This was huge in 2007. If you looked at the phone they produced then that changed technology, you would find it terrible compared to how apple has made their phones now. In 2006, Sony released the PlayStation 3. In 2013, Sony released the PlayStation 4. From when I was born to now, Sony went from the PlayStation 2 to the Playstation 4. Inside a computer, the CPU is the brains. In 2013, Intel released the Intel Core i7 processor. In 2017, Intel released the Intel Core i9 processor. They managed to allow computers to be faster and compute more processes at once. Windows is a computer operating system and is a great example of technology change. Windows 6 was released in 2005. Windows 7 was released in 2009, Windows 8 was released in 2012, and Windows 10 in 2015. Even the Wii has changed, It was originally released in 2006, while the Wii U was released in 2012. All of these examples have changed their technology to be faster, and all out better. In only 13 years, we have managed to advance so far along in technology. Who knows what technology will be like in 10 more years? With smartphones, we put technology in the palm of your hand. Technology has changed a lot, and it makes us wonder, have we hit the limit, or is this only the beginning?
