Abstract. The abstract should be crafted in English and encompass 250–300 words, addressing the following components: (a) the main research problem, (b) the objectives of the research, (c) the methodology employed, and (d) the results obtained. It is imperative to avoid citations and present the information in a single, cohesive paragraph.

Keywords: First Keyword, Second Keyword, Third Keyword.

1 Introduction

The introduction must contain: (1) a comprehensive description of the research problem, (2) an overview of previous research relevant to the topic, (3) an emphasis on the novelty of the current study, and (4) clearly defined research objectives. It is essential to refine the research problem by elucidating the gap between the normative perspective (das sollen) and the actual situation (das sein).

Previous literature discussing this topic should be reviewed to highlight distinctions from the current study, thereby underscoring its innovative contributions. The research objectives, along with key findings and arguments, should also be presented.

Subsequent paragraphs, however, are indented.

2 Literatur Review (Optional)

The purpose of the literature review is to examine the breadth of existing literature, delineate key concepts, and identify the various forms of evidence pertaining to a comprehensive topic. This review will provide a structured analysis that contributes to a deeper understanding of the subject matter.

Subsequent paragraphs will feature indentation for clarity and improved readability.

3 Methode

The research method section should encompass: a. the type of research conducted, b. the research approach utilized, c. details about research subjects and the location (in the case of field research), d. the techniques employed for data collection, e. validity checks for data (pertinent to field research), and f. the techniques used for data analysis. Rather than detailing the nature of interviews, observations, and documentation, this section should clarify the methods used to gather data (including why specific subjects were interviewed and how observations were conducted), the significance of the documents sought, and how they were obtained.

Moreover, it should explain the analysis process in relation to the theoretical framework established in the introduction and outline the topics addressed in the discussion that correspond to the research objectives.

Subsequent paragraphs will feature indentation for clarity and improved readability.

Sample Heading (Third Level). Only two levels of headings should be numbered. Lower level headings remain unnumbered; they are formatted as run-in headings.

Sample Heading (Forth Level). The contribution should contain no more than four levels of headings. The following Table 1 gives a summary of all heading levels.

Table 1. Table captions should be placed above the tables.

Heading level	Example	Font size and style
Title (centered)	**Lecture Notes**	14 point, bold
1st-level heading	**1 Introduction**	12 point, bold
2nd-level heading	**2.1 Printing Area**	10 point, bold
3rd-level heading	**Run-in Heading in Bold.** Text follows	10 point, bold
4th-level heading	*Lowest Level Heading.* Text follows	10 point, italic

Displayed equations are centered and set on a separate line.

$$x + y = z \tag{1}$$

4 Result and Discussion

The results and discussion section of a research article is crucial for conveying the significance of findings. To achieve this effectively, several key elements should be included.

First, it is imperative to conduct a thorough literature review that contextualizes the present study within the existing research landscape. This review should not only summarize pertinent studies but also identify gaps in knowledge that the current research seeks to address.

Second, the section should present the key findings clearly and systematically. This involves summarizing the primary results, supported by relevant statistical analyses and visual aids, such as tables and graphs, to illustrate the observed trends and patterns in the data.

Third, an analytical discussion is essential. This segment should interpret the findings in relation to the hypotheses proposed and the theoretical frameworks utilized throughout the study. It is important to consider the implications of the findings, examining how they connect to previous research and any contradictions or confirmations that emerge. Engaging with pertinent theories can enhance the understanding of the results and underscore the study's significance in advancing knowledge in the field.

Fourth, the section should conclude with a clear statement outlining the research's contributions. This statement should detail how the study enriches the existing literature, its practical implications, and recommendations for future research directions. The entire discussion must align directly with the article's objectives, ensuring that every point reinforces the central themes and goals of the research. To enhance clarity and flow, the discussion may be organized into several subsections, allowing the reader to follow the analysis with ease.

Subsequent paragraphs will feature indentation for clarity and improved readability.

Please try to avoid rasterized images for line-art diagrams and schemas. Whenever possible, use vector graphics instead (see Fig. 1).

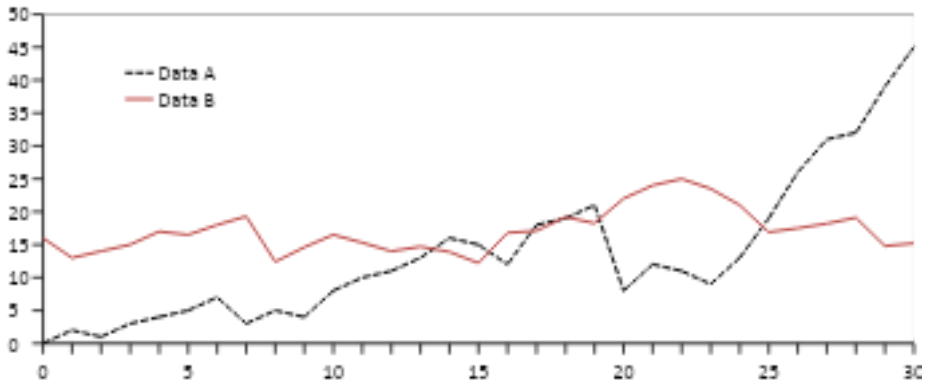

Fig. 1. A figure caption is always placed below the illustration. Short captions are centered, while long ones are justified. The macro button chooses the correct format automatically.

5 Conclusion

The conclusion should synthesize the findings while aligning with the research objectives and supported by thorough analysis. It must clearly address the research goals, highlight conceptual implications, practical applications, limitations, and future research suggestions. The conclusion should be presented cohesively in one paragraph, avoiding verbatim phrases from other sections.

For citations of references, we prefer the use of **the turabian style**. Using Turabian ensures our citations are consistent, organized, and makes it easier for readers to verify sources and explore the research.
