ABSTRACT

A well-prepared abstract enables the reader to identify the basic content of a document quickly and accurately, to determine its relevance to their interests, and thus to decide whether to read the document in its entirety. The Abstract should be informative and completely self-explanatory, provide a clear statement of the problem, the proposed approach or solution, and point out major findings and conclusions. The Abstract should be 100 to 200 words in length. The abstract should be written in the past tense. Standard nomenclature should be used and abbreviations should be avoided. No literature should be cited. The keyword list provides the opportunity to add keywords, used by the indexing and abstracting services, in addition to those already present in the title. Judicious use of keywords may increase the ease with which interested parties can locate our article (9 pt), (100-250 words).

1. Introduction

The The main text format consists of two left-right columns on A4 paper. The margin text from the left, right, and top are 2.5cm, while the bottom is 1.5 cm. The manuscript is written in Microsoft Word (in .doc or .docx, both acceptable), single space, Cambria 10pt and maximum 12 pages, which can be downloaded at the website:

<http://section.iaesonline.com/index.php/IJEEI/index>.

The paper can be written in American English or British English, but not mixed-up between both languages. The terms in foreign languages are written italic. The text should be divided into sections, each with a separate heading and numbered consecutively. The section/subsection headings should be typed on a separate line. Authors are suggested to present their articles in

* Corresponding author: Crosspounding Author Name; E-mail@...l.com ; +998-9999999

the section structure: Introduction – Proposed Research Method/Algorithm - Results and Discussion – Conclusion.

A title of article should be the fewest possible words that accurately describe the content of the paper. Omit all waste words such as "A study of ...", "Investigations of ...", "Implementation of ...", "Observations on ...", "Effect of....", "Analysis of ...", "Design of..." etc. Indexing and abstracting services depend on the accuracy of the title, extracting from it keywords useful in cross-referencing and computer searching. An improperly titled paper may never reach the audience for which it was intended, so be specific. The Introduction should provide a clear background, a clear statement of the problem, the relevant literature on the subject, the proposed approach or solution, and the new value of research which it is innovation. It should be understandable to colleagues from a broad range of scientific disciplines. Literature review should be put in "Introduction" section shortly and concisely to explain the difference ("gap") of the manuscript with other papers. The "(Proposed) Method" should describe the step of research and justification of how to get the data correctly, while the "Results and Discussion" section is the place to explain results in depth and to elaborate the meaning of results. Please put your research in context, therefore always try to link your findings with previous works or published results of other researchers. Additional section is allowed as long as the main section structure is intact.

3. Figures and Tables

All figures and tables should be numbered with Arabic numerals and must be mentioned in the manuscript. They must be placed as close as possible to the first reference to them in the paper. In figures, number and caption should be typed below and in tables those should be typed above. Figures and tables must be aligned in the centre of column and sized appropriately as width as one column. Although, large figures and tables that takes up more than 1 column width should be placed at the top or bottom of a page. For referring to figure or table don't use bracket or parenthesis, for example Fig 1. shows ...

3.1. Figures

All photographs, schemas, graphs and diagrams are to be referred to as figures. Low-quality scans are not acceptable. Figures must be embedded into the text and not supplied separately. Every figure has a caption that includes the figure number and a brief description. This caption must be enough perceptible without mention to the text.

Figure 1. an example of figure

if figure or graphs are duplicated from other reference, a citation should be appearing at the end of caption.

3.1. Tables

Only horizontal lines should be used within a table, to distinguish the column headings from the body of the table, and immediately above and below the table. Tables must be embedded into the text.

Table 1. An example of a table

Column A	Column A	Column B
And an entry	1	2
And another entry	3	4
And another entry	5	6

Details shouldn't be appearing in caption of the tables. You can put them in footnotes.

All tables, figures, and equations must be set in two-column format, expect for large tables and figures or long equations that may span across both columns if necessary. Any table, figure, or equation that takes up more than one column width must be positioned either at the top or at the bottom of the page (e. g. Table 2 on the next page).

4. Equations

Equations should be numbered consecutively throughout the paper. Equations and formulae should be typed by Microsoft Equation (insert-> symbols-> Equation) or MathType and numbered consecutively with Arabic numerals throughout the paper in parentheses on the right hand side of the page (if referred to explicitly in the text),

$$A = \pi r^2 \quad (1)$$

$$G(s) = s^2 + 5s + 7 \quad (2)$$

5. Conclusion

Conclusion may review the main points of the author work. Also, it could include application of proposed method and suggestion for feature research.

Nomenclature

All variable using this manuscript, listed in nomenclature.

- X* variables should appear in first column with the definition in second column
- t & Me* One and two-letter abbreviations should appear in italics
- Fr* Dimensionless number and parameter don't appear in italics

Table 2. Geometrical characteristics of the specimens

Specimens code	Composite tube diameter (mm)	Copper tube diameter (mm)	Specimens type	m (gr)	L (mm)
C-01	10	-	A	1.78	40
C.R-02	10	-	B	4.77	40
C-03	12	-	A	1.98	40
C-04	5	-	A	0.76	40
C.F-05	12	-	C	4.91	40
C.F-06	10	-	C	3.55	40

C.C-11	10	19	G	25.85	40
C.C-12	5	19	G	25.30	40
C.C-13	12	16	G	17.86	40
C.C-14	10	16	G	16.73	40
C.C-15	5	16	G	17.21	40

Funding

In this part of the research, the researcher mentions the financial funding from any party he obtained, from his university or other institution. If he does not have financial support, he writes "None".

Acknowledgements

In General, the last paragraph of each paper is the place to acknowledge people and sponsors for

dedicating and financial support. Company names and specific places should be cited only here. It should be noted that the heading of the Acknowledgment and the References must not be numbered.

Conflicts of Interest

The authors declare no conflict of interest, if it was available, please write the details of the conflict.

Appendix

Appendixes appear after acknowledgments.

References

References (10 PT)

The main references are international journals and proceedings. All references should be to the most pertinent, up-to-date sources and the minimum of references are 25 entries (for original research paper) and 50 entries (for review/survey paper). References are written in IEEE style. For more complete guide can be accessed at (<http://ipmuonline.com/guide/refstyle.pdf>). Use of a tool such as EndNote, Mendeley, or Zotero for reference management and formatting, and choose IEEE style. Please use a consistent format for references-see examples (10 pt):
