Cat Clock Free
Privacy Policy

The application "Cat Clock Free" uses Google's AdMob SDK to provide an interstitial to show advertisements to users.

The data AdMob collects is confined to only these instances and user's interactions with its advertisements.

The application does not collect or modify any data it sends to Google's AdMob.

Therefore the application fully complies with Google's privacy policy.

Google's privacy policy may be found here: https://policies.google.com/privacy?hl=en

For example, we send information about the views and interactions with ads so AdMob can provide aggregated reports to advertisers, like telling them whether AdMob served their ad on a page and whether the ad was likely seen by a viewer. They may also measure other interactions, such as how you move your mouse over an ad or if you interact with the page on which the ad appears.
