Education Manifesto Final Draft

The importance of education is to develop ur mind and learning about how to live life. School is for learning how to do stuff that we use in real life like math, banking, etc. we should learn more about how to change the oil in a car, how to change a tire on a car, how to cash out a check. we should learn those things in school because its important to know how to do things incase of an emergency.

I think our role to impact society is to pay taxes, bills, and other things like that and paying them on time.

in the future we will have a lot of new stuff involving robots and ai. There will probably be a lot of jobs that ai will do like in the video we watched talking about teachers being robots. I personally dont like the idea of teachers and stuff like that being controlled by robots because i'd rather just be taught by an actual person.

One of my lifetime goals is to be in a professional baseball/football league because i wanna be famous when i grow up and i also want to have a lot of money. I want to go to Wisconsin college and if im not able to play football because of my Chiari Malformation then i want to play baseball.
