Connecting Roam <> Track

Overview

There are a few simple steps to get Roam access to your Guesty data. If you have trouble you can email austin@goroam.io or support@goroam.io.

Steps

1. Login to Track and go to your API screen. You can do this by pasting this url [/system/api-keys/](https://yourcompany.trackhs.com/system/api-keys/) to the end of your Track URL
[\[https://yourcompany.trackhs.com/system/api-keys/\]](https://yourcompany.trackhs.com/system/api-keys/)
 - a. If that doesn't work you can navigate to your API keys through the Track UI by clicking the "cog", going to "Company Setup" then selecting "API Keys"
2. Once on the API screen add a new server key by clicking the green button. Call your key "Roam".
3. Once you've generated the new server key you should see a set that looks like this:
 - a. **Key:** 2ef4efec2e70123123v98b91966e7d36121
 - b. **Secret:** 99693fe6d3e41231232291412
4. After you have the key and secret, please [enter it here](#).

That's it!
