Top 4 Reasons People Want Rhinoplasty (Nose Job) Surgery

Rhinoplasty, commonly referred to as a nose job, is one of the most frequently performed facial plastic surgery procedures.

Rhinoplasty literally means to change the shape of the nose. There are many reasons for which people elect to have rhinoplasty surgery.

The goal of rhinoplasty is to take focus away from the nose and draw attention towards a person's eyes. A nose that is balanced with the rest of the facial features will achieve this.

Here are the Top 4 requests for rhinoplasty surgery:

1) Nasal Hump

This is called reduction rhinoplasty and is the most common reason that rhinoplasty is performed. Many people have a hump or convexity of their nasal profile. They want the hump shaved down and refined.

2) Bulbous Tip

Many people have a nasal tip that is too wide for their face. They commonly feel like there is a "ball" at the end of their nose. Rhinoplasty can refine the tip of the nose and make it narrower and/or better shaped.

3) A Wide Nose

Having a wide nose is another common reason that people seek a rhinoplasty surgeon. The bones of the nose can be wide compared to the rest of the face. Narrowing the bones can enhance the overall facial aesthetic.

4) A Droopy Nose

A droopy nose is one where the tip hangs down. This can often hide the upper lip and make the face look longer.

Lifting the tip of the nose in these situations will enhance the overall facial balance by making the facial proportions more balanced.
