Minutes ESAP Rucio integration meeting
20 July 2020

Present:
Yan Grange
Zheng Meyer-Zhao
Pandey
Aris Fkiaras
Rohini Joshi
Riccardo Di Maria

- **Expectations from ESAP side**
    a. Redirect user to Rucio Web UI from ESAP
    b. Integrate ESAP with Rucio REST API
    c. Start Rucio client in Analysis Interface

- **CERN work on integration of Rucio in Jupyter**
    a. The work done to support the data transfer scenario for non expert people is summarised in
    https://docs.google.com/document/d/1adFo5QuO46QRHgBQftEpWMGPtK7SXsPBj_N1syFMyIw/edit#heading=h.13fni7rjrjzl

- **Planning and next steps**
    a. First step to set up the current setup and link to it from the interactive processing working group — we could use it but we have a lack of resources. Cluster needs some cleanup but we can use it.
    b. Try it out (https://github.com/didithilmy/rucio-jupyterlab), have a clear documentation, and make a pull request to the ESCAPE WP2 repo (https://github.com/ESCAPE-WP2), make suggestions for implementation because the students can still work on it. => (Yan Grange :P)
