Sharing "Solution-Stories"  
against Disease

Chlorine Dioxide (Clo2) - Electrically Expanded Water (Ex W) - Hydrogen Gas - Hypochlorous Acid - Dimethyl Sulfoxide (DMSO)

Topic: **Autism (and related conditions) Treated with Clo2**

Edition 2022.7

## CLO2 TO TREAT AUTISM?

First of all, **Autism is one of the most complex disorders** because it affects the person's social interactions, communication, behavior and body functions as well as gastrointestinal functionability. It used to be considered a rare and genetic condition but the [increased rates](#) over the past 50 years (over a 9,000% jump in accounted numbers with continued increases each year) indicate some other possible source of the cause. *Some sources suggest that the 1970's count was low because the researchers were not as "aware" of diagnosing the actual symptoms of autistic children. However, if you happen to witness an autistic child having a tantrum or meltdown in public, it is very difficult to miss..even in the 1970's.*

There is **so much controversy** surrounding Autism because of the possibility of it being related to toxicity from the environment of the child [or even because of vaccine use](#). Because of this, it

can be considered offensive to even claim that there is a human cause, or workable recovery path from Autism.

I would state that of all of these Testimonial Article Editions, the testimonials from parents about treating Autism have been the most criticized and vilified by the media and several in the general public. Parents who have treated a child with Clo2 have been accused of "giving them bleach" as a "fake" cure for Autism. [This battle has taken place in the courtrooms, in social media as well as in the media itself](#) where the truth continues to be brought forth. Clo2 is safe and effective when used properly.

It should also be stated again (as usual) that Chlorine Dioxide is not a cure to Autism. However, it is a part of the treatments that help people recover from this condition. Other practices, such as watching the timing of the lunar cycle, specific diet restrictions, as well as the use of dichotomous earth are used to correct the imbalances in the body.

In the end, it is the body that heals and recovers as the toxins and pathogens are controlled and/or removed. Recovery of Autism takes time and patience but has now reached into the [thousands](#) where more testimonials are added to each month.

Although recovery from Autism is more common with younger children and less so with adults, properly used Clo2 has helped with people of all ages on the spectrum. The greatest single source for Autism treatment with Clo2 is from [kerrrivera.com](#). Kerri Rivera has more experience and understanding of successfully treating Autism than any other practitioner in the world. She has also paid a price for her work by being vilified by some key critics who have worked to slander her name and reputation. (There are some very wealthy organizations who could be threatened by her successful work.)

## TESTIMONIALS

(Unedited with Initials):

(L)

This is unbelievable. We haven't done Anything but CD. Not even near full dose and yesterday was the best day we have had in almost a year. **PANDAS** made her sad and irritable and a ticking time bomb. It made her be so aggressive with her brother. She can't stop hugging him and loving him how she use to. She's actually playing WITH him and not attacking him. Last night they went to sleep together. She's coming back to me. I know it won't always be this easy but this gave me the hope I needed. A week ago she wouldn't even let me put clothes on her. We were home for a month unable to go anywhere. Today we went for a walk!

Thank you so much

Name: L.

(Anon)

I want to thank you from the bottom of my heart. It is almost two years ago since I got in touch with you and you decided to help me, although it was a risk you took. Thank you. At the beginning of the treatment, my son's ATEC was 37. I was devastated, due to the fact that the family could very clearly see that something was very wrong and no doctor could. They told me to be happy and that not

everything could always be 100% perfect. He was diagnosed with....nothing. It was very obvious that he was suffering, he cramped, had **PANDAS** and everything was going in the wrong direction. Many symptoms. Because of my gut feeling and you, the nightmare ended. In addition to this, your protocol also saved my life. I had rheumatoid arthritis and lyme disease and was in a much worse state than my son; I had already got many "treatments" including antibiotics, cortison and antidepressants. I had been in a heart clinic with almost heart failure. The result was that I had to go very very low and slow, to be able to treat myself and my son. My own experiences with hospitals, clinics and blind doctors helped him though. Without you, it would not have been possible, any of it. Today, after CD, enemas, BSO & co, and 2.000 photos of parasites from us both? He is starting grammar school this autumn, with red cheeks and a happy smile on his face and writing this, tears are running down my face. I cannot thank you enough, Kerri. Bless you for your Courage, for being you and never giving up. I myself quit my job, have now started two different healer educations and I am looking forward very much to starting to support people as well.

A big big hug, many mind-flowers sent to you and much love.

Kerri,

(Anon)

Thank you from the bottom of my heart for doing what you do. Last December I realized that I had a lot of the symptoms of Aspergers and I was absolutely crushed. I looking at a potential life sentence imprisonment inside my own mind, all the while totally alone and isolated with no one there to support me. Darkest of days. But then I remembered reading about MMS several years back. I accidentally used Google instead my normal of DuckDuckGo to search for "MMS and **autism**" and the obvious censorship and propaganda campaign convinced me right then and there to purchase your book.

It's been about a month since I began following your advice and all these 'mental' issues have just started melting away. It's almost scary how quickly it's all happening. I'm no longer stumbling through life drugged up on opioids. I can look people in the eyes now. And I can feel emotions so vividly and intensely for the first time in my life. I've cried tears of joy, sadness, anger, forgiveness and compassion and love every bit of it. Parts of my mind are coming online that I didn't even know I had. There's still a lot of healing to do but I'm going to be able to have hobbies, friends, and romantic relationships now -like

a complete person. 23 years, my entire childhood and adolescence, lost ... probably due to the vaccines... but definitely to needless suffering. It's over now. I can finally heal.

You helped make this possible. Thank you so much. The English language needs better words to express gratitude because of you. We may never meet in the flesh, but I will be eternally grateful to you and pray for your continued success.

### (Anon)

Daniel lives in Croatia and goes to school in 4th grade and is 10 years old. He has an older brother, 11, and a younger sister, 8 years old.

He can do math in his head:  $356 + 425 = 781$

He was diagnosed with **autism** and ADHD. He was non-verbal til age 5.

Now he feels great.

He has recovered with Kerri Rivera's protocol and is now taking iodine as well.

Daniel says, "Thank you Kerri Rivera. I love you. Thank you for saving my life and my brother's life."

### (Anon)

Dear friends,

I want to share another success story from the mother of my young friend Max.

Max is recovering from **autism**, with a peak ATEC of 126. He would actively avoid interacting with family members, was anxious and not potty trained.

Max has made remarkable progress in less than a year's time on the protocol.

See the story in his mother's own words.

Max is 12, he weighs 94 lbs. He's been on the CD protocol since beginning of July 2019.

He's always been up and down over the years, with his worst atec being 126.

– Constant meltdowns

– Living in a state of perpetual anxiety

– Soiling himself

– No attention span

– Zero social skills and zero desire to be social and interact with others. Actually putting his hand over his own mouth and running away into a corner to show you he doesn't want to be spoken to and interacted with.

– Cold sweaty hands which would leave actual wet patches where he'd touched.

– Avoided eye contact: If you tried to look at him he'd move

your face away so you're not looking at him. Would try and escape out of a moving car if looked at..

– Poor sleep

– Violent, aggressive behaviour during the frequent meltdowns, pulling people's hair out from the root and then feeling so upset with himself for behaving like that.

– Absconding: Trying to run into moving traffic to get away during meltdowns.

– Speech: Unable to speak in sentences of more than 3-4 words, usually to tell you what he wanted. Diagnosed as speech of 18-22 month old in May 2019.

– GI Problems: Countless food intolerances, vomit profusely if I tried to give him sulphuric foods. Chondroitin sulphate made him vomit horribly even just 1 drop.

ATEC and Treatment History:

Pre-Treatment: Summer 2018 was ATEC of 126 and he was back in nappies (diapers).

Pre-Treatment: April 2019 his ATEC was as low as 110.

Began Protocol:

May 2019: Started him on black seed oil May 2019 and saw symptoms start to improve immediately.

July 2019: By July his ATEC

was 57 when started the CD protocol. [Wow! 50 Point ATEC drop in 2 months from black seed oil!]

February 2020: Now his ATEC is 27 and I believe continuing to go down as his speech is getting better.

If you saw him last April, you would not think this possible.

Major Gains and Improvements:

- Mood: He is now calm, very well behaved. There is no anxiety, no meltdowns.

- Speech: He can carry on a fairly good conversation going back and forth perhaps 5-6 interactions.

- Sleep: He sleeps perfectly.

- Social: His social skills are so much better, as is his desire to be social with us. He interacts, sits with us, laughs at jokes, asks to play, tells me he has friends.

- Aggression: No violence, no aggression.

- Self-Expression: Types every day in full sentences about his thoughts and feelings.

- Self-Care: Self help skills getting better and better.

Health:

- Heavy Metals: Had him tested January 2020 and the aluminium is pouring out of

him in “breathtaking” amounts (doctors words).

- GI Issues: His digestion improving. He is now on 16 drops of chondroitin sulphate with no vomiting at all. He is very affectionate, gives me cuddles and says, “I love you Mummy,” typed, “I want to be with mummy forever.”

EVERYONE is noticing the complete turnaround in him – many people have seen him at his worst and cannot believe this is the same person. I have so many parents wanting to know what I’ve done so they can repeat the same for their **autistic** child.

I’ve been trying to heal him for 7 years since he was 5. Some things made him better for a while and then he’d crash back down, worse than ever leaving me in despair as to what can be done to help him.

This is the FIRST time not only is he getting better and better but he is maintaining it. He is progressing massively- it is a dream come true. ❤️❤️❤️

Just to clarify – his ATEC is now 27 as of February 2020.

It was 57 start of CD protocol in July 2019.

auIt was 110 in April 2019, with its lowest being 126 the year before. It has been 126 before as well, when he was 6/7 years old.

**(Sarah)**

We are going well on CDS ... I have made CDS with HCl, and CDS with citric acid .... citric acid seems to give really stable ppm, but with HCl I have struggled to get good ppm. My son is doing 40 drops of MMS activated with HCl, his weight category is 28 drops .... on citric he got to 10 drops .... all the sensitive kids, or sensitive humans have a better tolerance to MMS with HCl ... CDS wise it's not a problem making the CDS with the citric acid ... we use both CDS with citric acid for enemas and baths; and drops of MMS and HCl orally.

We have a private GP ... he is aware and has used MMS and I have introduced him to the HCl and CDS process, he is excited about this progress, and the Kerri Rivera protocol that has fully cured 100 children with **autism** using MMS and CDS ... no one can claim this ever in the history of autism ... her protocol of hourly dosing and baths and enemas is being used by 1800 families ... all on a facebook page and every family is positive and making progress daily, even other conditions in kids are being treated this way ... So GP plans on putting all the asd and me/cfs kids in NZ on protocol .... I'm going to make my own CDS from the powder you

supply as I need heaps of CDS ... we are using it for acne, mouthwash, oral, enemas, baths, and vege / fruit washing, cleaning, etc ....

### (Erana)

My son is **autistic** and we have been dosing CDH using Kerri Rivera's recovery programme. We know it works and we are seeing recovery every day in our son.

### (Jo)

We are using MMS and HCL successfully to treat our son who has symptoms of **autism**, he is making great progress. I am also on the treatment to keep him company but have found my health has improved greatly, candida gone, anxiety gone, fatigue gone, digestive upsets gone.

### (Albert)

Age : 4 years old Started at age **3yrs Atec on starting: 68-72** ( range) (had wax and waning symptoms) Duration of protocol: for exactly 1 year Current Atec: 7 Initially he had a few words, non conversational, lots of echolalia. No social skills or play, never played with siblings, lost in space, very poor attention and focus, lack of awareness.

Aggression, emotional dysregulation and very poor sleep. Once we started the protocol April 2019 first thing we noticed was improvements in sleep. Started with 16 doses of CD, pulled him from school so he could get as much dose in the day time. BSO, breakthrough chondroitin, and humic fulvic. Once we started the enema and PP protocol his speech improved, he started having more words , attempts at conversation, but so shocking was the improved social play with his siblings. The would play all day, he would ask about his sister. He would wait for her to wake up so the could play together, eat together. He and her became so close. Something I never seen. Then we noticed pretend play and increased awareness. He would greet you in the mornings and tell everyone goodnight before bed. Remind you about things you forgot. Tell you where eveything is in the house if you forget or are looking. As we continued with PP protocol ( spoke to you in November at which time you increased CD dose to 24) and increased CD dose, his cognition, focus and attention improved. At this time we would add footbath, binders, robynzyme and were already on heavy metal detox ( zeolite, clean clay, ultra binder, iodine daily) Now he text me at work to report things he siblings are doing wrong. He makes sure he reads the bible to his siblings and prays with them before they go to bed when I am not back

from work and then text me that its done and says good night to me. His speech is so much more improved, and can have about 3 back and forth exchange in conversations. He is no more eligible for speech therapy giving his improvements. We still have to work on aggression, emotional dysregulation and increased conversational skills. But from where we started I feel blessed. All I can do is continue to pray for you Kerri, that GOD will keep you safe and answer all your heart desires. Stay blessed. FYI: you recovered my sister's son and that's how I got to know about you. I am currently a physician in the USA, and hope to bring awareness of **autism** recovery to conventional medicine.

### (Albert)

These parents' confidence and joy is absolutely beautiful. I'm almost in tears with hope. I can imagine their dreams of gaining **their child's transformation**. Praise the Lord for the sovereign providence of God that led them to the help they needed! Albert XXXX.

### (Angelica)

Dear Team My kids have been taking MMS for 4 months, they were diagnosed with **autism** and thank God this has been working great. As I was reading the message from Jim Humble's

book, I do think my kids are injured from the vaccination and thought who can guide on this.. Thank you, Archbishop Mark Grenon and sons, Bishop Jon Grenon, and Bishop Joe Grenon, for contributing the Vaccine Procedure for overcoming vaccine injuries. In addition, Mark also developed the MMS1/DMSO Patch Protocol. You will continue to be rewarded for your tremendous work in this life and the next.

Angelica xxxx

### (Helena)

Mark Grenon, I owe health of my both sons to you guys and chlorine dioxide. No other way to kill mutated viruses and bacteria. One was restored to health from **Autism**!

### (Heather)

I have been suffering along with the neighbor's **autistic** son's horribly disturbing agitation, screaming, yelling, crying, banging, stomping and noisy insomnia for 4 years . Suddenly the child is 97% content and quiet. I found out that they are using MMS and bought some for myself. I am trialing it on my dog's skin condition by spraying topically and by dosing their drinking water. I have found it to be a perfect deoderant and

tonight I got some flea bites from an infested basement area which were burning and stinging. This went away immediately after spraying with the 40 gtts / 4 ounces solution. WOW i am going to start oral dosing myself tomorrow.

### (Emily)

My son was diagnosed with high functioning **autism** when he was 4. We worked with diet and biomedical interventions and made moderate progress for a few years. An early ATEC score (after implementing the GAPS diet) was 39. (ATEC scores are a free online survey parents fill out to assess the severity of their child's **autism**).

When my son turned six, we began implementing Kerri Rivera's protocol for healing **autism**, which relies heavily on hourly dosing of CD/MMS (CD=Chlorine Dioxide) throughout the entire protocol.

(Kerri Rivera's protocol is outlined in her book "Healing the Symptoms Known as **Autism** - and available on Amazon.com she references Jim Humble directly in her book and other work and his amazing MMS. You can also see her speak on youtube.com and **autismone.com's** videos. The protocol suggests a few more things in addition to CD/MMS such as a GF/CF/SF/SF diet and some anti-parasitic

supplements.)

Although my son had no apparent "gut health" issues as a co-morbidity of his **autism**, he began regularly passing parasites in his nightly CD enema (as did I and other members of the family who were also on the protocol).

Within one year of following this protocol, my son's ATEC score was below a 10 (which is considered to be recovered and no longer "diagnosable" with **autism**). He was recovery #145 on Kerri's list and although he still struggles with a few compulsive tendencies and is catching up on social skills; we plan to continue with CD to address these issues. He was able to matriculate into mainstream Kindergarten and First Grade at the local public school and blend in well with other students. His ABA therapists used to meet with him 3x per week to do drills, and now have stopped seeing him and only meet with me 2x per month to check in... They say he doesn't need their help any more, he just needs to practice being around other kids. He made his first real friends in first grade and according to his teacher was well-liked by his classmates. He passed the safety swim test to go down the water slides at the YMCA, joined Cub Scouts, played T-ball, and was in a play, he went up and comforted a friend who got hurt at camp this week, he held a baby cousin on

his lap the first time he met her (3 month old) at his request. He is well-behaved, engaged, loving and calm - all thanks to CD.

I am a huge fan of Jim Humble's work and the results that our family has seen from MMS/CD.

I would encourage others who are considering how best to help a child recover from **autism** to use CD as a first step. Don't be afraid - try it yourself along side your child. Start slowly. Use sweet leaf stevia to sweeten/flavor it without breaking your child's healthy diet, or negatively impacting the efficacy of CD. This one substance works better than any of the supplements or IV's we spent hundreds (thousands?) of dollars on at the NaturoPath's.

It is very affordable, very inoffensive to take, and very effective. Start low and slow to minimize the herxing and keep your child happy with the doses. It really, really works!

### (Nil)

My 16 year old son recovered from **Autism** (ASD Autism Spectrum Disorder) by the use of Kerri Rivera's MMS/CD (chlorine dioxide) protocol. I am now convinced that older kids and adults, tough nuts can all recover from **Autism** as evidenced by so many recoveries in various CD forums. The recovery happens fairly rapidly

at a negligible cost. CD takes care of so many ASD co-morbid conditions like seizures, PANS/PANDAS, Mitochondrial disorder, Lyme, gastro intestinal disorder, OCD/stimming, neuro/psych, sensory issues etc. Brain fog, cognitive, behavioral, academic issues are now all resolved. As a side effect we have seen allergies are now gone and the immune system has improved where we do not fall sick or catch colds.

I think CD is a game changer for ASD recovery.

### (Joaquín)

English Translation

2 years and 10 months

This is a testimony of a mommy who has a child with **autism**, who decided to follow the treatment recommended by Kerri Rivera 02/07/2012 about where he presented the MMS, as any mom first tried it for a week, could said that treatment began on 09 or 10 July 2012, from there has made good progress with his young son Joaquin.

Commentary on August 26 and told us the following: We start with the protocol of the bottle, this week we look a little irritated Joaquin nauseous, many snots and sleepy, the next week we change the dose as directed according to their age and weight specified on page **autismo2** (2 1 1 2 2 1 2 2) over 8 times a day with one hour time difference between any

food or liquid. Immediately started having severe diarrhea at least about 10 a day so scalded so much and even made him some injuries on the buttocks, with the passing of the days these were easing, then the second week a day on our walk in the afternoon with my two children incredibly, when I called the old to pass the ball we got together Joaquín my call telling his sister: THIAGO COME! THIAGO COME! and played kickball three, the following days did not call but if you took away the toys and bounced him if his brother took away something that could get hurt and it's good to see this because since Joaquin stopped communicating with us had not had any contact with his brother even visual. Another manifestation that we have observed is that although not always staring us has a particular way of making us see that we want, for example: Sometimes on weekends when we can be together all four by himself invites us popcorn each one always beginning with his dad, then me and finally his brother Thiago, then settles between her dad and me putting his little body as if asking permission with his arms around us and embraces us strong, believe me it feels great, remember that at first was not looking, rejected any sign of affection and assaulting others and likewise we heartbreaking. I can not say that speaks spontaneously and express each of their needs every day because

it is not, yet there are days when it seems like it does everything have fallen all alone, but then something happens that tells us that everything is well, for example, about the lunch looks me in the eyes and says: Hmmm that Nice! or goes out and likes to look at girls big and when you do look back at me and smiles by Chinese children. What I have seen also in the weeks went about meals is that there are some who get irritated or hyperactive, like he loves bananas! but not content with one, two or three and wants is impossible if I do take them off screaming sooo loud then is as if he had taken a red bull, until the battery is down and weep inexplicably. Another thing I've learned to do is rice milk, potato, coconut and almonds but the latter despite being rich will cause strong irritation at the cheeks and touch feels like a dish-washing sponge. Also Ms. Kerri tells me I should put the enemas and bathe with drops daily wanted to buy syringes and cannulas but it is impossible to buy without prescription. At the moment I am not giving any vitamins or supplements because I do not appreciate what you have indicated that you ask if I should go giving calcium or zinc, what I can tell so far is that my son's health is fine despite having fallen a kilo and a half of weight as it also was with inappetence and take the overnight the little things he likes so much as milk, flour and candy does nothing of grace, I

take two months with treatment and I can tell it has not been sicker, no longer stomach infections, sore throat no more no more bronchi in order! I fought until antalgins, clobazam, panadol, bronchodilators including medicines not to mention we had to give the bad nights, because almost every day we awoke with piercing screams and inconsolable, a month before we started the diet protocol outlined in free gluten, soy and casein. It's been already two months we've been using the MMS

Commentary on 12.17.2012 where he shares his small advancing through the testimonies: Hello again I'll tell you about my son Joaquin, My son is 2 years 10 months, was born a very healthy child and their development was quite normal until one month before the 2nd birthday, a January 2, 2011 without being sick sleeping gave a febrile seizure, the worst I did not know what was happening in the hospital told me I had a fever and therefore 40 °C convulsed, they did an EEG and the neurologist told me that their results did not show any alterations that were normal not to worry, since that day began a series of allergies and constant diarrhea, I medicated with clobazam to convulse in no case to submit another fever, apparently the body of my son react equally with each foot, then imagine! Each foot was torment, bathing two or three times in one night,,

antalgins, pills that being a baby was hard to give it without causing vomiting, running to the hospital, because all the time gave very acute diarrhea and bronchial colds constantres and cough.

Suddenly he began to isolate himself, to watch a lot of TV, learned to walk alone and we were very happy but always with a lot of care with him and not slept alone for fear of fevers. A year and a half just national holiday again in the night and feel the baby cries when we take it out of the crib was flying fever, we were about to give treatment and reached a new seizure, the most frustrating thing was that in both Sometimes he was in good health until vaccines well tolerated and only three days after he arrived diarrhea were the causes of fevers. As you can imagine began a series of tests, checks with the neurologist, psychologist, psychiatrist, physical medicine, etc. He also stopped talking the little he had learned at a young age, awoke crying loudly at night every day, flapped his arms, walked on tiptoe, and looked away when spoken not turned to look, we raise our voices and he screamed and would not listen either, seemed not to hear well, then again to the hospital, the first thing we ordered was evoked potentials test, to see if he had hearing problems but these were normal. I asked the neurologist will check it, the doctor said it was too early to know he had a problem and told

him occupational therapy, speech and more. Joaquin became very irritable, but despite that in the first few weeks again learned some single words and short songs, but suddenly there came a time when saturated and forgot everything! We began again and again felt the same, so a couple of months so we could not move forward with therapy. Just when my son turned two he neurologist diagnosed with atypical **autism** (regressive) again commanded a series of tests in order to find possible causes, I was ready I was hoping to hear anything else but what happened to my son, so we had to face the idea. I started looking for information, possible treatments, cures for Joaquin, and found Overcoming **Autism** Foundation and MMS treatment of the protocol that had recovered several children with the same disorder Joaquin, then also found the Genesis Church II by mean of them contacted MMS Peru Health and Rev. Mario who gave me all the information of the MMS and we have provided, has cleared all my doubts, all these people have helped me in the recovery process Joaquin. It is a long, narrow, but it's worth; Joaquin has 5 months using MMS and one of the clearest evidence of their effectiveness is their health, this perfect! Sleep well most nights, waking in a good mood, turns when called almost always, please ask for things and says thank you, I do not mean that

he is already cured, has learned quite retains more information and participates some games such as veneer, shown affectionate with his dad, me and his brother before or watched, avoided him as an obstacle, as if there were, did not like contact with anyone, and played alone, now understands and performs simple commands, staring a little more and gives us beautiful smiles when he's happy, when he misbehaves and called attention comes hugs me, kisses me and tells me: already happened? There are many things that seem little but for us are amazing and we are only in the first part of the treatment. There are still some tantrums, has days that are too shy or fussy, gradually stop walking on tiptoe, and hand flapping has given enough. I am very grateful for all the help I received, much information at all times, I'm sure I will see more success in my son but you have to be very consistent, I live at my in-laws and believe me, it is very difficult sometime give no forbidden foods behind me, not everyone understands the commitment, the protocol calls be strict because these errors cause more cerebral and intestinal inflammation and it is true that's why there's autistic symptoms that are difficult to attack. Well I hope soon to be writing more on improving Joaquin and this information will help others with the same problem, is in our

hands to improve the quality of life for our loved ones and our children's.  
Best regards., Leslie Podesta - Peru.

### (Ashley)

I'm a 25 year-old woman who is **on the spectrum** with many autoimmune symptoms, chelating to remove mercury using Andy Cutler's protocol. That protocol helped reduce my symptoms immensely, but I felt I was at a plateau so I used MMS2 for about two weeks and it helped substantially in lowering the pressure and anxiety in my brain. I'm going to try MMS enemas very soon and will give updates.
