

Specific Noobie topics

Specific topics we could cover at the noobies event

- Ontology servers and how my team could use these to populate our LIMS to keep these up to date. Such as
 - NZMC to HPI CPN code mappings
 - Specimen site code lists
 - Facility code tables
- NHI/patient resources for pulling correct data from national sources to speed up laboratory practices (instead of relying on the paper form, perhaps even choosing between the national data and an eOrder OML (in FHIR land that would be a Diagnostic request?))
- FHIR survey resources
 - Can validation be defined?
 - What products consume these well
 - What business logic is not easily handled by FHIR questionnaires?
- LOINC/SNOMED when to use these inside FHIR resources, how does this combine with the non-codable results (such as CT value which can take any decimal value)
-
