

Using a Spreadsheet (3)

1. Log in to your Google Account and Select Google Drive and then Create a new Spreadsheet and when you save it (Share) call it Assignment8
2. For this assignment you will create a spreadsheet on a topic of interest to you and then embed charts from the spreadsheet into a Document you write about the topic. You should have at least 2 different kinds of charts in your document.

For example

- Changing population of states
 - New York Yankees all time home run leaders
 - Number of computer science majors at leading colleges
 - Occupations with best job prospects in next 10 years
 - Changing population of tigers over last 100 years
 - Distance of planets from the earth and the size of the planets
- Make sure that your spreadsheet has enough numerical information for you to analyze
3. Make sure you site any sources that you use to gather your information (at the bottom of the spreadsheet you can put where the data came from)
 4. You should have at least two charts that make sense to explain your data (push More to see more charts if the ones shown aren't that good)
 5. You can decorate your spreadsheet by pasting in pictures on it
