Abstract:

Abstract made in English. Papers are written using MS-Word Font TNR 10, italic, single space, A4-format with one column. Abstracts should briefly describe research problems, aims, a method used, results, and conclusion. An abstract should stand alone, meaning there is no citation in the abstract. Consider it the advertisement of your article. The abstract should tell the prospective reader what you did and highlight the key findings. Avoid using technical jargon and uncommon abbreviations. You must be accurate, brief, clear, and specific. Use words that reflect the precise meaning. The abstract should be precise and honest. It emphasizes research results written with one-line spacing with left and right margins.

How to cite this article (APA Style):

INTRODUCTION ←12 Calibri Bold

This section could also provide the expected results. The introduction must be written in single line spacing. The introduction comprises of: (1) research problem; (2) insight and problem solve planning; (3) summary of theoretical studies and the results of the present study (state of the art), related to the observed problems (gap), (4) research aims and (5) research advantages.

In Introduction, Authors should state the objectives of the work at the end of introduction section. Before the objective, Authors should provide an adequate background, and very short literature survey in order to record the existing solutions/method, to show which is the best of previous researches, to show the main limitation of the previous researches, to show what do you hope to achieve (to solve the limitation), and to show the scientific merit or novelties of the paper. Avoid a detailed literature survey or a summary of the results. Do not describe literature survey as author by author, but should be presented as group per method or topic reviewed which refers to some literatures.

Example of novelty statement or the gap analysis statement in the end of Introduction section (after state of the art of previous research survey): “..... (short summary of background)..... A few researchers focused on There have been limited studies concerned on Therefore, this research intends to The objectives of this research are”.

According to Armagan (2014), the introduction section comprises the first portion of the manuscript, and it should be written using the simple present tense. Additionally, abbreviations and explanations are included in this section. The main goal of the introduction is to convey basic information to the readers without obligating them to investigate previous publications and to provide clues as to the results of the present study (references should be selected from updated publication with a higher impact factor, traceable, and prestigious source books). To do this, the subject of the article should be thoroughly reviewed, and the aim of the study should be clearly stated immediately after discussing the basic references.

This template format was made in MS Word (.doc) which then been saved in Rich Text Format (.rtf) and can be downloaded in <https://ejurnal.mercubuana-yogya.ac.id/index.php/psikologi>. It enables the authors to prepare their manuscripts which meet the Insight: Jurnal Ilmiah Psikologi conditions properly.

The body articles must be written in Cambria, font size 11, 0 pt before spacing, and 3 pt after spacing, 15 pt line spacing.

METHOD ←12 Calibri Bold

Methods should make readers be able to reproduce the experiment. Provide sufficient detail to allow the work to be reproduced. Methods already published should be indicated by a reference: only relevant modifications should be described. Do not repeat the details of established methods.

Basically, this section describes the way the research was done. The main materials must be written here: (1) research design; (2) population and samples; (3) sample collection techniques and instrumental development; and (4) data analysis techniques.

The specification and type of tools and materials must be written in case the researches have been conducted by using them.

The qualitative research, such as classroom action research, case studies, and so forth, need to mention the researcher attendance, research subject, and participated informants, as well as the methods used to explore the data, research location, research duration, and the description of research results validation.

It is suggested that the authors avoid organizing the article content into the smaller parts than second subheading in this section. However, in case of unavoidable factors, the writing style must follow the “Results and Discussion” section

RESULTS AND DISCUSSION ←12 Calibri Bold

This section is the main part of the research result article in which the “fix” results are served. The data analysis processes, such as statistical computing and hypothesis testing, are not necessary to be served. The materials reported are the analysis results and hypothesis testing results. In addition, tables and graphics are also can be showed to enunciate the verbal narration. Tables and images must be given a comment or discussion. The details of qualitative research written in some sub-topics which directly related to the focused category.

The discussion of article aims to: (1) answer the problems and research questions; (2) show the ways the findings obtained; (3) interpret the findings; (4) relate the finding results to the settled-knowledge structure; and (5) bring up new theories or modify the exist theories.

In discussion, it is the most important section of your article. Here you get the chance to sell your data. Make the discussion corresponding to the results, but do not reiterate the results. Often should begin with a brief summary of the main scientific findings (not experimental results).

The following components should be covered in discussion: How do your results relate to the original question or objectives outlined in the Introduction section (what/how)? Do you provide interpretation scientifically for each of your results or findings presented (why)? Are your results consistent with what other investigators have reported (what else)? Or are there any differences?

Research results must be clearly concluded in answering the research questions. Interpreting the findings should be done by using logics and present theories. The findings in form of facts found in the research fields are integrated to previous researches or present theories. This must be supported by reliable references. In case the researchers bring a new theory, the old theories can be confirmed or rejected, or modify the old theories.

In some cases, it is unavoidable to organize an article by making sub-headings. Thus, this is the format to write Insight: Jurnal Ilmiah Psikologi manuscripts with sub-headings. In this section, there are specific rules which cannot be separated in an articles.

CONCLUSION ←12 Calibri Bold

This part provides the summary of results and discussion which refers to the research aims. Thus, the new principal ideas, which are essential part of the research findings, are developed. Conclusions should answer the objectives of the research. Tells how your work advances the field from the present state of knowledge. Without clear Conclusions,

reviewers and readers will find it difficult to judge the work, and whether or not it merits publication in the journal. Do not repeat the Abstract, or just list experimental results. Provide a clear scientific justification for your work, and indicate possible applications and extensions. You should also suggest future experiments and/or point out those that are underway. The suggestions, which are arranged based on research discussed-findings, are also written in this part. These should be based on practical activities, new theoretical development, and/or advance research.

Acknowledgment

This section can be written in case there are certain parties need to be acknowledged, such as research sponsors. The acknowledgement must be written in brief and clear. In addition, avoid the hyperbole acknowledgment.

Author Contribution Statement

REFERENCES ←12 Calibri Bold

Citation and referencing must be written based on APA style 7th Edition which is organized by using Mendeley or ZOTERO software latest version. References used at least minimum of 30 references, consisting of 80% of journals (reputable journals and research reports including thesis and dissertation) for a maximum of the last 10 (ten) years of publication. ←Cambria, font size 11, 0 pt before spacing, and 6 pt after spacing, and 12 pt Line spacing, Justify.
