

Climate Action Mapping

The Climate Action Map tool is a place-based map of actions that people are taking to mitigate or adapt to climate change. It's useful because it can quickly and easily help you visualize the climate actions that your community is already taking. It can also help to connect participants to other projects of interest near them building communities of practice.

To use the GIS tool go to: <https://bit.ly/4f9G0WH>

Then fill out the web form that looks like this:

Community Climate Action Mapping

This survey is a tool for creating a shared visualization of current climate actions that people are taking. Please share your examples of things that you and your community are doing to mitigate and adapt to climate change.

Common topics include eating local food, active transportation, electrification, building weatherization and community organizing.

Upload a picture of your climate action here.*

Feel free to add a photo or some other visual representation of your climate action (drawing, poster, watercolor, etc).

* Please note that any image you submit will be shared on the Community Climate Action Map and may be re-used by others in the future *

1 Drop image here or select image (number of files allowed: 1 - 4) 

Please write a short description about the climate action in your photograph.*

What did you do? Who was involved? How does it relate to climate change?

Users will provide an image of the action, a brief written description of the action, and the location of where the action is being taken. More [detailed example instructions](#) are available, if you'd like them. **That's it!**

To view the results that are collected, you can browse through the community-led examples. You can sort through the results by location and subtopic (energy/food/transportation).
