X9 Tablets

While accessing content “kolibri status” command report “Not responding (5)”

No erros on the tablets yet.

Created x16 Test users to login.

More than 30 minutes, while running the test, as soon as I did a ‘kolibri status’ command... it shows

INFO Running Kolibri with the following settings: kolibri.deployment.default.settings.base
OK, running (0)

Kolibri running on:

http://172.18.0.2:8080/

http://127.0.0.1:8080/

kolibri@tsp:~\$

...Then everything stopped... Error message: “Sorry! Something went wrong!....”
