

Gen-12 SS Tutorial

Alrighty here is the tutorial that everyone has been asking me for.... this video and post will be explaining the process of getting a super safety to work in a Genesis Arms Gen-12 shotgun. The video will have all the information laid out as concisely as I could, excuse the allergy affected voice and the camera shake. Also I will post some notes below that go along with this video.

1. Highly recommend reading the 308 info page that [Grey Market Research](https://greymarketresearch.net/m508-308-info-and-instructions/) has put out, it has a lot of useful info regarding the 308 specific uppers and lowers (<https://greymarketresearch.net/m508-308-info-and-instructions/>)
2. The longer 308 pre-drilled lever in this video is [Grey Market Research](#) lever and the cams that I use in this video are [Ze Pro](#) cams, highly recommend both of these sellers
3. The images attached to this post show all the parts I ordered to kit out my Gen-12 shotgun to run super safe, note that the flat wire springs I listed here are verified to work with a hydro buffer, not all flat wire springs work with a hydro buffer due to the opening not being wide enough
4. If you need larger mags for the Gen-12 the only seller making reliable mag extensions that I know of is [Nick Rhoades](https://nexuspnc.com/shop) (<https://nexuspnc.com/shop>); once I get some of his products in I will be putting them through some tests and getting some videos recorded for the group
5. If you have any questions on the process or need help feel free to message me on Facebook, I am not on the messenger very much but will try and get to everyone's messages

As always, thanks to all the innovators and legends in the community that give back to the group constantly, appreciate each and every one of you! 🙌

High Performance Tubb Precision Stainless Steel Flatwire Buffer Spring for AR-15 Rifles & Carbines. This Tubb Precision SS AR-15 Flatwire Buffer Spring fits both carbine and standard length stocks.

-Why should you use Tubb Precision SS Flatwire Buffer Springs? Extended life at optimum performance! Many conventional buffer springs are constructed from music wire or non post winding processed stainless steel. Their performance becomes suspect in as little as 500 rounds and can cause rifle performance to degrade to the point that rifle function will change. We fielded many questions from people complaining about "mystery malfunctions" when their rifles get past that round count , and we've found installation of a Tubb Precision SS Flatwire Buffer Spring cures nearly all of them, and it cures them for good.
