Abstract:

A well-prepared abstract enables the reader to quickly and accurately identify the basic content of a document, determine its relevance to their interests, and thus decide whether to read the document in its entirety. The Abstract should be informative and completely self-explanatory, provide a clear statement of the problem, the proposed approach or solution, and point out major findings and conclusions. The Abstract should be 100 to 250 words in length. The abstract should be written in the past tense. Standard nomenclature should be used, and abbreviations should be avoided. No literature should be cited. The keyword list provides the opportunity to add keywords used by the indexing and abstracting services, in addition to those already present in the title. Judicious use of keywords may increase the ease (9pt)

Keywords: *First keyword, Second keyword, Third keyword (in alphabetical order).*

IJIE (Indonesian Journal of Informatics Education)

Vol X Issue Y 2023

Introduction (14 pt)

This document is a template for the Word (doc) version. If you can use this version of the document as a reference to write your manuscript. The introduction describes the background of the completed problem, the issues related to the problem solved, the research review previously conducted by other researchers relevant to the research undertaken.

The main text format consists of a flat left-right column on A4 paper. Text margin from top and bottom is 2 cm, right and left is 2.5 cm. The manuscript is written in Microsoft Word, single space, Arial 10pt and maximum 12 pages. The title of the article should be the fewest words that accurately describe the contents of the paper. Indexing and depreciation services depend on the accuracy of the title, extracting it from useful keywords in cross-reference and computer search.

Related Work (Optional, 10 pt)

In this section, the author should tell the specific information about the previous research that was done before. The previous research should be related to the article presented in this document.

Research Method

The paper should contain a post containing 1. Introduction, 2. Related work (this one is optional, this may contain the previous research especially the research related to the presented article), 3. Research Method (may include analysis,

architecture, methods used for problem-solving, implementation), 4. Results and Discussion, 4. Conclusions and 5. Future works are containing further research in the future. Each paragraph can consist of several subparagraphs written with Arab numbering as shown in the following section. The number of pages minimum ten pages and maximum 12 pages A4 size.

Table 1. The performance of

Variable	Speed (rpm)	Power (kW)	
x	10	8.6	
y	15	12.4	
Z	20	15.3	

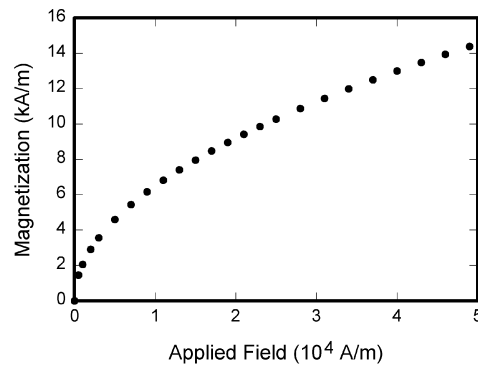

Figure 1. Effects of selecting different switching under dynamic condition

Number equations consecutively with equation numbers in parentheses flush with the right margin, as in (1). Be sure that the symbols in your equation have been defined before the equation appears or immediately following.

$$I_F = I_B = -I_C = A^2 I_{A1} + A I_{A2} + I_{A0} = \frac{-J\sqrt{3}E_A}{Z_1 + Z_2} \quad (1)$$

where I_F is the fault current.

Use “(1),” not “Eq. (1)” or “equation (1),” except at the beginning of a sentence: “Equation (1) is”

Result and Discussion

Discussion of the results of research and testing obtained presented in the form of theoretical descriptions, both qualitatively and quantitatively. The results of the experiment should be displayed in either a graph or table. For charts can follow the format for diagrams and drawings.

Result

This is an example of subsection created in 2nd heading format to deliver the research result.

Discussion

This is an example of subsection created in 2nd heading to deliver the analysis.

Conclusion

Please include a brief summary of the possible clinical implications of your work in the conclusion section. Although a conclusion may review the main points of the paper, do not replicate the abstract as the conclusion. Consider elaborating on the translational importance of the work or suggest applications and extensions.

Acknowledgement (Optional)

Acknowledgement section can be included. Please note that this section is also an optional section.

References

References are important to the reader; therefore, each citation must be complete and correct. There is no editorial check on references; therefore, an incomplete or wrong reference will be published unless caught by a reviewer or discussor and will detract from the authority and value of the paper. References should be readily available publications. It is suggested that the authors refer to the latest literature, such as five years old maximum. The exception is granted for classic literature - for example those related with Human Evolution is strongly related with Darwin's Origin of Species (1859).

Reference management software such as Mendeley, Zotero, and Endnote are recommended. Please use APA 7th style edition to include some citation into the research article. The guidelines in the following [link](#) may be handy. The following list is an example of citation on APA 7th style:
