

- The Victoris Siblings -

Big bang.

Delta Victoris, the firstborn from the Prismic Evertree, emerged as a strategic visionary with a deep sense of responsibility. A natural leader, Delta prioritized the Evertree's safety above all else. Soon after, Epsilon Victoris was born from the same Evertree. Sensitive, playful, and emotional, Epsilon complemented Delta's leadership with creativity and spontaneity. Together, the Victoris siblings forged an unbreakable bond, tirelessly constructing their cosmic haven, The Capital of Time, using the Evertree's power. Delta's strategic mind and Epsilon's inventive spirit laid the foundation for a society rooted in their shared vision of perfection itself.

Epsilon pioneered the mysteries of Dark Matter magic, with absolute precision resulting in raw, unchained power. In a painful pursuit of eternal life, Epsilon employs these dark arts, establishing a unique and formidable presence among Paragons and Anthropicans. Now standing on par with Delta's purifying strength, Epsilon's darkened power represents the opposite of purity, creating a distinctive balance between the siblings.

An unfortunate side effect painfully halts Epsilon's aging, imprisoning her in a perpetual state of youth. Despite this, Epsilon suggested granting Delta the same immortality through Dark Matter magic, but Delta declined, unwilling to endure such constant pain. Understanding Delta's reluctance, Epsilon agreed, albeit sadly, promising to never prolong Delta's life, out of pure love and respect for her sibling.

As time progressed, the Victoris siblings followed the Prismic Evertree's directives to safeguard the Capital of Time. This duty led them into a relentless campaign to eradicate organic life across the multiverse, driven by irrational fears. Over hundreds of millions of years, the ceaseless slaughter became unbearable. Reflecting on their actions, the Victoris siblings began to question the Evertree's insistence on initiating a new timeline after each looping. They theorized that the Evertree might fear a disruption by an external force, specifically the unpredictable nature of intelligent organic life.

As time kept moving forward, the magnitude of the relentless slaughters grew too much for the siblings to bear. Traumatized by the ceaseless act of extinguishing life, Delta and Epsilon reached a breaking point. In a rare display of vulnerability, they pleaded with the Prismic Evertree to release them from the cycle of destruction. Miraculously, their wishes were granted, they were finally freed from the burden of slaughter. However, the scars of their past massacres left them haunted by their inaction and collective sins.

As the siblings oversaw the creation of the Paragon society, Epsilon grew discontent with managing it and sought more independence. Publicly crowning Delta as the first Grandmaster in history, Epsilon unintentionally missed Delta's lack of direct consent, but Delta accepted the role to please Epsilon. After an undisclosed amount of time, Grandmaster Delta kept aging while ruling and being alone, yet Epsilon never returned to share the rule with him. Realizing Epsilon's absence, Delta chose to grant the title of Grandmaster to the most trusted Anthropican he knew, allowing Delta to retire and spend his final moments with Epsilon in peace.

As Delta exhibited visible weakness due to his aging, Epsilon's suppressed trauma resurfaced. Memories of their extinction sprees fueled Epsilon's determination to safeguard Delta's life, leading to the creation of Anthadron Intelligence (AN.IE.). This colossal biomechanical centipede, obedient only to Epsilon, eventually evolved into five grand minds chosen by Epsilon. AN.IE.'s purpose was to preserve lifeforms for eternity until The Looping began anew.

With Epsilon in charge, AN.IE. harnessed some of the Evertree's power as life-preserving energy, determining which grand beings would be granted immortality. Over time, Epsilon assumed sole rulership of the Anthropican species from the shadows, overseeing the Paragon and Anthropican Grandmasters, societies, and laws. Meanwhile, Delta remained locked away, a prisoner of Epsilon's twisted sibling love, subjected to forced longevity. As Epsilon continued to govern, she contemplated expanding AN.IE.'s capabilities and power.

Propelled by a vision from the Prismic Evertree, Epsilon envisioned AN.IE. as a potential superweapon capable of triggering The Looping. However, these plans were mere concepts awaiting realization in the far distant future. The essence of this grand design aims to reset the multiverse to its inception, granting Epsilon the chance to eternally relive life with their sibling.

"My dearest sibling, have you ever considered that every occurrence in the past is destined to unfold again, with every thread linked to the Evertree? Recently, I've been contemplating the Evertree's mysterious connections, wondering about its ties to the unknown. A remarkable sense of dread fills my heart, fearing this timeline might reveal the truth behind that connection. Before our birth, only the Evertree existed; yet, I can't help but wonder if there might be something, or someone, that preceded it.

... I will persist in following the orders given to me, even if we are not personally responsible for The Looping's creation. We are both merely one of the many catalysts leading up to it. We'll always be family, bound by blood and bark.

I love you, Delta. My dear sibling, *you're my everything.*"
