Design consideration #6 Transcribing and analyzing qualitative data	Impact on methods	Impact on materiality	Impact on humans	Impact on outcomes
Reflexivity questions	How do digital tools/spaces, specifically, invite, discourage, scaffold or frame transcribing practices? Transform, resist, constrain them?	What changes to existing tools and spaces may be needed to create the ideal transcription workflow?	What changes are needed by the humans in order to enact this workflow? What ethical and political consequences might result? Who is included and excluded? Who or what holds power?	What changes to existing tools and spaces may be needed to result in a high quality transcript?
