| *Article history:*<br>Received June 15, 2023<br>Revised September 24, 2023<br>Accepted December 26, 2023 | An abstract of maximum 250 words is required for any submitted manuscript. Abstract is written using Book Antiqua-10. It is written narratively containing at least the aim, method, and the result. It is written in 1 paragraph. Each manuscript should have 3 to 6 Keywords written under the abstract. The keywords should help the audience search the relevant literature to their interest.<br><br>**Key words**: *first keyword, second keyword, third keyword* |

## INTRODUCTION

The manuscript should be the original work either as a research or reference studies which have never been published in any form of publication. The manuscript is single-spaced. The margin text from the top, left, right, and bottom are 3 cm, 3 cm, 3 cm and 3 respectively. The manuscript is written using Book Antiqua-12. The suggested organization of the paper consists of: Introduction - Methods - Results and Discussion - Conclusion. Each part should explicitly declare the contents.

Please explore in more words the background of your paper and your current research position among other research on related themes. You should discuss here as well your research's relations with those of other researchers; literature review, especially on most relevant, newly academic works published in high reputation journals, is a must. Please try to answer the question: why you believe that your research question is so important to answer and how you think your answer would be a contribution to the existing scholarship on the subject.

Here you may discuss every aspect of the issue. It is necessary to build an argument and to provide original data discussed and compared to research and works of other scholars. In other words, the way to discuss an issue here is by combining the data and the discussion. So, it is not recommended to separate merely data description from the analysis on it. Every quotation is written down in a specific way that can be identified as a "quotation" different from your original text. Then describe your purpose for this research.

## METHOD

The research methodology section describes in detail how the study was conducted. A complete description of the methods used enables the reader to evaluate the appropriateness of the research methodology. You must describe exactly what you did: what and how experiments were run, what, how much, where, when, and why equipment and materials were used. The main consideration is to ensure that enough detail is provided to verify your findings and to enable the replication of the research.

## RESULT AND DISCUSSION

The purpose of the Results and Discussion is to state your findings and make interpretations and/or opinions, explain the implications of your findings, and make suggestions for future research. In the Result section, summarize the collected data and the analysis performed on those data relevant to the issue that is to follow. The Result should be clear and concise. It should be written objectively and factually, and without expressing personal opinion. It includes numbers, tables, and figures (e.g., charts and graphs). Number tables and figures consecutively in accordance with their appearance in the text.

Table 1. An example of a table

| An example of a heading | Column A (t) | Column B (T) |
|---|---|---|
| Add an entry | 1 | 2 |
| Add an entry | 1 | 2 |
| Add an entry | 1 | 3 |

In the Discussion section should explore the significance of the results of the study. A combined Result and Discussion section is also appropriate. This section allows you to offer your interpretation and explain the meaning of your results. Emphasize any theoretical or practical consequences of the results. The Discussion section should be a reasoned and justifiable commentary on the importance of your findings. This section states why the problem is important; what larger issues and what propositions are confirmed or disconfirmed by the extrapolation of these findings to such overarching issues.

The discussion will always connect to the introduction by way of the research questions or hypotheses you posed and the literature you reviewed, but it does not simply repeat or rearrange the introduction; the discussion should always explain how your study has moved the reader's understanding of the research problem forward from where you left them at the end of the introduction.

## CONCLUSION

The conclusion is a summary of the results and discussion and should be written in  paragraphs instead of numbering. Moreover, it can also be added to

the prospect of the development of research results and application prospects of further studies into the next (based on results and discussion). The main conclusions of the study should be presented in a short Conclusions section. Do not repeat earlier sections.

**REFERENCES**

All references must follow the APA 7th Edition as far as possible. It is suggested the use of a reference manager, such as Zotero or Mendeley.
